# DC Contactors, 600V to 1000V

## Application

These devices are suitable for use in commuter and light rail vehicles. Potential applications include heating, air conditioning and on-board-power conversion. They are sturdily constructed, capable of switching large loads and

require only minimal space. The contactors described here-in are based on designs with an excellent track record of long-term applications in harsh environments.

## Technical Data

		S 155	S 156	S 157	S162	S 195
Continuous Thermal Current ( $I_{th}$ )	w/o electronic coil power reduction	250 A	250 A	-----	250 A	250 A
	w/ electronic coil power reduction	300 A	300 A	250 A <sup>2)</sup>	-----	-----
Number of Main Contacts		2	3	4	1	1
Nominal Load per Contact						
$U_{nom} = 750\text{ V}$ ( $U_{max} = 900\text{ V}$ )	DC 1 <sup>1)</sup>	100 kW	100 kW	100 kW	100 kW	50 kW
	DC 5 <sup>1)</sup>	18 kW	18 kW	18 kW	18 kW	11 kW
$U_{nom} = 1000\text{ V}$ ( $U_{max} = 1300\text{ V}$ )	DC 1 <sup>1)</sup>	50 kW	50 kW	50 kW	50 kW	35 kW
	DC 5 <sup>1)</sup>	10 kW	10 kW	10 kW	10 kW	7 kW
Maximum Load per Contact						
$U_{nom} = 750\text{ V}$ ( $U_{max} = 900\text{ V}$ )	DC 1 <sup>1)</sup>	> 500 kW	> 500 kW	> 500 kW	> 500 kW	> 280 kW
	DC 5 <sup>1)</sup>	> 100 kW	> 100 kW	> 100 kW	> 100 kW	> 76 kW
$U_{nom} = 1000\text{ V}$ ( $U_{max} = 1300\text{ V}$ )	DC 1 <sup>1)</sup>	> 160 kW	> 160 kW	> 160 kW	> 160 kW	> 110 kW
	DC 5 <sup>1)</sup>	> 50 kW	> 50 kW	> 50 kW	> 50 kW	50 kW
Switching Cycles per Hour		1800			3600	
Mechanical Life, Cycles		> $2 \times 10^6$			$5 \times 10^6$	> $3 \times 10^6$
Insulation		Tested per VDE 0115, Group D, at 3,9 kV for $U_{nom} = 1200\text{ V}$ Creep and arcing distances for contamination category 3 for $U_{nom} = 1000\text{ V}$ per VDE 0660, Part 100				
Nominal Coil Power (DC) at 125% $U_{nom}$ and coil at operating temperature		Pick-up 240W	Holding: 40W (with series resistor)		18 W	19 W
			Holding: 10W (with electronic power reduction)			
Nominal Coil Voltage (DC)		24 V ... 110 V	24 V ... 110 V	24 V ... 110 V	24 V ... 110 V	24 V ... 110 V
Voltage Range		70 to 125% $U_{nom}$				
Operating Temperature Range		-25°C to +70°C (-13°F to +158°F)				
Storage Temperature Range		-40°C to +80°C (-40°F to +176°F)				
Applicable Standards		IEC 77; VDE 0115; VDE 0660				
Shock Resistance		5 g	5 g	5 g	5 g	5 g
Weight <sup>3)</sup>		ca. 4,5kg (9,9lb)	ca. 5,0kg (11lb)	ca. 5,5kg (12,2lb)	2,3kg (5,1lb)	2,0kg (4,4lb)
Blow-out Method		Permanent Magnet				
Coil Suppressor		Varistor				

1) Loads certified per VDE 0660, part 100 at  $U_{nom}$  and  $U_{max}$ .

2) 4 pole contactor S157 can optionally be equipped with electronic coil power reduction only.

3) Dependent on the number of auxiliary contacts applied.

## Load Capacity

Current turn-off is **unidirectional only**. The load ratings in the above tabulation are for a single switching element only.

By placing two **contacts in series** the load capacity can be increased by a factor of 2. Partition plates (Part No. 0295 822) may have to be inserted between the main switching elements.

The placement of two **contacts in parallel** permits an increase of the continuous thermal current rating ( $I_{th}$ ) by a factor of 1,7. Since two neighboring elements will never switch exactly synchronous, the load rating for the **single contact** must never be exceeded.

## Device Identification for Series S155 - S157

S	1	5	5	-	N	2	0	-	E	-	1	1	0	-	G	1
---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---

**Series**  
S155, S156, S157

**Nominal Voltage**  
N = 1000V ( $U_{max} = 1200V$  DC \*)

**Main Contacts**  
1st digit: No. of NO contacts  
2nd digit: No. of NC contacts

**Coil Power Reduction**  
E = Electronic  
S = Series Resistor

**Coil Voltages**  
110V (24, 48V, 72V, Special Voltages)

**Auxiliary Contacts**  
G = S 826 a  
K = S 826 a20  
L = S 800 a  
M = S 800 a20  
(a: Screw Terminal; a20: Quick Disconnect Terminal)

**No. of Auxiliary Contacts**  
(see page 9)

\*) For low voltage contactors, series S155 - S157, see listing B80

## Device Identification for Series S162

S	1	6	2	-	N	1	1	0	-	G
---	---	---	---	---	---	---	---	---	---	---

**Series**

**Nominal Voltages**  
N = 1000V ( $U_{max} = 1200V$  DC \*)

**Coil Voltage**  
110V (24, 48V, 72V, Special Voltages)

**Auxiliary Contacts**  
G = S 826 b  
K = S 826 b20  
M = S 800 b20  
N = S 804 b  
(b: Screw Terminal; b20: Quick Disconnect Terminal)

(see page 9)

\*) For low voltage contactors, series S 162 see listing B90

## Device Identification for Series S195

S	1	9	5	-	A	E	-	0	-	1	1	0
---	---	---	---	---	---	---	---	---	---	---	---	---

**Series**

AE = 1000V ( $U_{max} = 1200V$  DC \*)

**Auxiliary Contacts**  
0 = None  
2 = One Aux. Contact with Quick Disconnect Terminals  
3 = Two Aux. Contacts with Quick Disconnect Terminals

**Coil Voltage**  
110V (24, 48V, 72V, Special Voltages)

\*) For low voltage contactors, series S195 see listing B95

## Coil Power Reduction Circuit

This device can be used with multipole contactors S155 through S157.

The power reduction module decreases coil holding power to approximately 10 W. Holding current is independent from the applied control voltage. The contactor will operate reliably between 70% and 125% of the nominal control voltage.

The application of the power reduction circuitry alters the drop-out performance of the contactor at decreasing coil voltage  $U_{ct}$ . In standard applications drop-out will occur at  $U_{ct} < 60\%$  of  $U_{nom}$ . For some applications special solutions will have to be employed.

Control inputs will accept external control devices (e.g. overcurrent annunciators, etc.).

Input	Function
1	Control Input
2	
3	Control Voltage $U_{ct}$ (observe polarity !)
4	
5	Coil connections factory installed
6	

Plan View  
Component Side

Input terminals 1 through 6 are equipped with WAGO spring-clip type.

## Fire Rating

Series S155 through S162 and S195: Plastic material for coil bobbins, contact carrier and arc chute conform to UL 94 - VO.

## Application Information

Reliability of operation is enhanced if the devices are positioned so that the prime shock axis does **not** coincide with the direction of the arrows shown.

Distance between contactors: 5mm (0,2) \*\*

Distance to current carrying parts: 10mm (0,39) \*\*

Arc chamber clearances: see sketches below

### Series S195

P = Rated Load  
a = 20mm (0,79)  
b = 30mm (1,18)

P > Rated Load  
a = 20mm (0,79)  
b = 60mm (2,36)

### Mounting Position

No special orientation required, upright orientation preferred.

### Series S152 through S162

P = Rated Load  
a = 70mm (2,75)  
P > Rated Load  
a = 100mm (3,94)

### Mounting Position

No special orientation required, preferred orientation with spring downwards.

# Single Pole Contactor, Series S162

Series S162

## Device Outline:

## Mounting Template:

Contact (Pos.1) and arc chute (Pos. 2) can be easily replaced if necessary (for part No. see page 9).

Keying prevents reverse insertion of the arc chute.

Terminal Sizes	S 162
Main Contact	M10
Coil	M4

Polarity	S 162
Coil	no special requirements
Main Contact	<b>Observe correct Polarity !</b>
Arc Chamber	<b>(Pos. 3)</b>

For further information see list B80

# Single Pole Contactor, Series S195

Series S 195

### Mounting Template:

## Auxiliary Contacts

Series	Type	Quantity
S155 - S157	S 800a xx <sup>1)</sup>	4 max.
	S 826a xx <sup>1)</sup>	
S162	S 826b xx <sup>1)</sup>	1 max. (For mounting of an assembly see table page 7 on list B80)
	S 804b <sup>1)</sup>	
S195	S 870z <sup>2)</sup>	2 max.

1) One NO and one NC contact;  $I_{th} = 10 \text{ A}$

2) One change-over contact;  $I_{th} = 3 \text{ A}$

Contacts S800 and S826 can be supplied with either screw terminals (XX = blank) or connector (XX = 20). For further information see listings D19, D20 and D23.

**Note:** for small current switching at low voltages (24V and below, e.g. computer inputs, etc.) use contacts S826 and S870.
