# Measuring everything that matters

Siemens offers a complete service package as well as all measuring instruments to assist you in engineering, designing, supplying, installing and commissioning measurement solutions for complete industrial plants. Our “one-stop shop” concept supports selection of all process instrumentation and analytics all the way to integration with your process control system. Additional industrial components and systems are easily incorporated into the overall plant and ensure smooth process flows.

Whether process instrumentation, process analytics or weighing and dosing systems, our solutions meet the requirements of process industries such as chemicals, oil and gas and hydrocarbon processing, water and wastewater, pharmaceuticals, mining, aggregates, cement, pulp and paper, food and beverage or shipbuilding.

# Measuring everything **that matters**

Siemens Process Instrumentation offers you innovative, single-source measurement solutions to increase plant efficiency and enhance product quality. Our intelligent instruments are also designed for seamless interplay with the larger world of industrial automation and control systems – enabling greater process transparency and smarter decisions for your business. Benefit from the competence of Siemens: a full automation vendor operating around the globe, with service available 24 hours a day, 365 days a year.

# Takes pressure off your business: **SITRANS P**

SITRANS P is a complete range of measurement instruments for measuring relative pressure, differential pressure and absolute pressure. In addition to high measuring accuracy and ruggedness, the modular system features superb operating convenience and functionality as well as a perfect safety concept.

**SITRANS P320/420** – the first pressure transmitter for remote commissioning of functional safety

- Time and effort savings due to remote commissioning of SIL devices
- Developed in accordance with the IEC 61508 standard for use in SIL 2/3
- Reduced response time increases process efficiency by speeding up the control system's response to changing process conditions
- Ready for plant digitalization with the HART 7 pressure transmitter: Data logging functions and event control deliver users in-depth control and analysis.
- User-friendly display due to clear display and diagnostic icons in accordance with NAMUR NE107
- Maintenance cost reduction due to proof test interval of up to 10 years
- FM-approved

© Siemens 2024

**SITRANS LH100/LH300**

- Suitable for applications ranging from drinking water or wastewater to corrosive liquids thanks to stainless steel enclosure
- Rugged submersible sensors for hydrostatic level measurement
- Installation possible in pipes with 1" inner diameter

**SITRANS P200/210/220**

- Single-range transmitter for relative, absolute and hydrostatic pressure
- Pressure sensors: stainless steel sensors (SITRANS P210 and SITRANS P220) as well as sensors with ceramic membrane (SITRANS P200)
- Conversion of measured pressure into either 4–20 mA or 0–10 V signal

**SITRANS P300**

- More than 90 different process connection variants offer the highest degree of flexibility
- Versatile communication connection via HART protocol, PROFIBUS PA or FOUNDATION Fieldbus
- Fulfills EHEDG, FDA and 3A requirements
- Maximum measurement deviation of 0.075%
- Can be combined with flushmounted absolute or relative pressure measuring cells

**SITRANS P compact**

- Analog transmitter for absolute and relative pressure
- Hygienic design in accordance with EHEDG, FDA and GMP recommendations
- Stainless steel process connections and enclosure
- Measurement deviation ≤ 0.2%

© Siemens 2024

# Because every degree matters: **SITRANS T**

SITRANS T products are the temperature measurement champions, even in extreme conditions. Whether used in hot, cold or hazardous environments – the communicative SITRANS T product family meets all expectations. Not matter whether head, rail or field mounting – all transmitters or sensors are available individually or as complete measuring points. They offer high precision in every application and are quick and easy to connect to thermocouples or resistance thermometers. The SIMATIC PDM intelligent software package permits parameterization in just minutes, and input errors are avoided.

**SITRANS TS500** temperature sensors for pipes and vessels – from simple applications to solutions for harsh environments

- Modular system with thermowell made of tubular or barstock material, extension, connection head and optional transmitter or display
- Intrinsic safety, flameproof and nonsparking versions are available

© Siemens 2024

## Transmitters for head mounting

**SITRANS TH100**

- Pt100 single-input transmitter
- Diagnostics LED
- Supports four-wire Pt100
- 4–20 mA
- Low-cost and compact

**SITRANS TH320**

- Universal single-input transmitter
- Diagnostics LED
- Supports four-wire RTD/TC/mV and resistances
- Supports Callendar-van Dusen
- HART 7 + SIL 2/3 (IEC 61508)
- 4–20 mA
- Interface for local HMI

**SITRANS TH100slim**

- Pt100 single-input transmitter
- Supports four-wire Pt100
- 4...20mA output with M12 socket
- Low-cost and compact in stainless steel enclosure to weld on compact thermometer

**SITRANS TH420**

- Universal dual-input transmitter
- Hot backup function
- Diagnostics LED
- Supports two four-wire RTD/TC/mV and resistances
- Supports Callendar-van Dusen
- HART 7 + SIL 2/3 (IEC 61508)
- Interface for local HMI

© Siemens 2024

## Transmitters for rail mounting

### SITRANS TR320

- Universal and single-input transmitter
- Diagnostics LED
- Supports four-wire RTD/TC/mV and resistances
- Supports Callendar-van Dusen
- HART 7 + SIL 2/3 (IEC 61508)
- 4–20 mA

### SITRANS TR420

- Universal dual-input transmitter
- Hot backup function
- Diagnostics LED
- Supports two four-wire RTD/TC/mV and resistances
- Supports Callendar-van Dusen
- HART 7 + SIL 2/3 (IEC 61508)

## Transmitters for field installation

### SITRANS TS100

- For multiple applications
- Supplied with directly installed cable
- ATEX and IEC EX approvals; can be operated in Zone 0
- Wide range of options thanks to modular principle

### SITRANS TS200 compact design

- For multiple applications
- Compact design with directly installed fixed connection (M12, Lemo, etc.)
- ATEX and IEC EX approvals; can be operated in Zone 0
- Wide range of options thanks to modular principle

### SITRANS TR320/420

- Stainless steel or aluminum enclosure
- Temperature field transmitter for multiple applications
- Configurable via local display
- Full redundancy via hot backup function (TF420)
- SIL 2/3-certified
- HART 7
- 4–20mA
- Combined types of protection available, such as Ex d + Ex i

© Siemens 2024

**SITRANS TS300**

- Clamp-on temperature sensor
- Design meets EHEDG recommendations and is therefore suitable for use in the food and beverage and pharmaceutical industries
- Replaceable measuring inserts

**SITRANS TS Thermowell**

- Wide range of lengths and materials
- Comprehensive coverage of applications
- Customer-specific options are possible
- High stability thanks to high-quality materials
- Comprehensive material and quality controls available

# Everything flows: **SITRANS F**

Whether measuring gases, liquids or steam – choosing the right flowmeter is decisive for productivity. This is where the SITRANS F line comes in. Our portfolio contains the fitting flowmeter for every application and medium, with five different flow technologies available to suit a wide range of operating conditions: electromagnetic, Coriolis, ultrasonic, vortex and differential pressure.

**SITRANS FCT070/FST070 transmitter: flowmeter solutions**

- Full control and parameterization via the control system
- Direct integration into SIMATIC S7, TIA Portal and PCS 7
- Coriolis or ultrasonic technology module for ET 200SP
- Selection via TIA Selector (secures easy integration in SIMATIC)
- Fast digital signal to sensor with 10 ms update rate
- Full advanced transmitter functionality via automation control
- Via PROFINET, the measurement data is transmitted to the automation system in real time
- Full hazardous area solutions with use of SITRANS I300 barrier
- Coriolis-specific flowmeter: SITRANS FC230
- Ultrasonic-specific flowmeter: SITRANS FS230
- Integration function blocs available for all Siemens automation systems

© Siemens 2024

## SITRANS FC
## Coriolis mass flowmeters

Our multivariable devices measure the direct mass flow rate of liquids and gases in almost any application. They deliver reliable and repeatable information on mass flow, volume flow, temperature, density and concentration (for example, Brix or Plato). They are available in sensor sizes DN 1.5 to 150 mm with different flowmeter transmitter versions to fulfill requirements for high performance in oil and gas, chemicals, food and beverage, pharmaceuticals and automotive applications.

Full range of digital transmitters: The uniform sensor and transmitter platform offers solutions for sizes from Di 1.5 to DN 150 mm with three different transmitters.

The innovative and user-friendly FCT030, FCT010 and FCT070 transmitters feature audit trails, trend curves, data logger and advanced diagnostic functionalities.

**SITRANS FCT010 single digital channel transmitter**

- Full multiparameter Modbus output ideal for PLC integration
- Robust aluminum housing mounted directly on the different sensors, for most sensor sizes
- Small in size, ideal for skids and compact machines
- Full performance in a cost-efficient solution

**SITRANS FCT030 advanced full-range transmitter**

- Available as compact, remote field-mounting and remote wall-mounting enclosures
- Four I/O channels, freely configurable and programmable
- Full communication package: HART; PROFIBUS PA and DP; Modbus
- Advanced, large-size graphical display including trend curve and multilevel display views
- Integrated data logger, ideal for diagnostics on advanced applications
- Advanced diagnostic functionality
- Built-in programmable settings for optimizing pulsating flow and aerated flow
- 16+ integrated unique fraction tables for concentration measurements
- Built-in batch controller for two-stage batch applications

**SITRANS FCS300**

- Dual splitflow design in sizes from DN 15 to DN 150 in different versions, wetted material in AISI 316 as well as nickel alloy
- Remote- or compact-mounted
- Available with broad range of FCT030, FCT010 and FCT070 transmitters
- Solid performance with mass flow accuracy of 0.1% or 0.2% and density accuracy of down to 2 kg/m³
- Robust frame and housing isolate from external vibrations, allowing ideal measurement in difficult environments
- Ideal for the chemical, petrochemical and oil and gas industries

© Siemens 2024

**SITRANS FCS low flow**

- Single-tube design in sizes from DI 1.5 to DI 15, with a wide selection of available connections
- High-performance accuracy: 0.1% on massflow and down to 0.5 kg/m³ density
- Available with broad range of FCT030, FCT010 and FCT070 transmitters
- DN 4 design withstands pressure rates up to 1000 bar
- Ideal for a broad range of low-flow applications within the automotive, chemicals, and food and beverage industries
- Easy installation using a plug-and-play interface
- Optimal hygiene and CIP cleanability for the food and beverage industry as well as pharmaceutical applications, thanks to single-tube construction without internal welds, reductions or flow splitters

**SITRANS FCS400**

- Dual splitflow design in sizes DN 15 to DN 50
- Most compact design on the market
- Available with all common process connections including a variety of common sanitary connections
- Available with broad range of FCT030, FCT010 and FCT070 transmitters
- High-performance accuracy: 0.1% on massflow and down to 0.5 kg/m³ density
- Ideal for OEM, skids, machine builder, marine, sanitary and chemical applications

## SITRANS FM electromagnetic flowmeters

SITRANS FM electromagnetic flowmeters measure flow volumes of electrically conducting fluids such as water, chemicals, food and beverage, slurries, sludge, paper stock, and mining slurries with magnetic particles.

**Modular pulsed DC meters: SITRANS FM MAG (DN 2 to DN 2200)**

- Full transmitter program includes MAG 5000/MAG 6000/MAG 6000 I; compact- or remote-mounted
- Multiple I/O as standard and communication modules PROFIBUS PA/DP
- DeviceNet, FOUNDATION Fieldbus, HART and Modbus RTU are available
- MAG 5100 W sensor for water and wastewater applications
- MAG 3100 P sensor for process industries and the harsh requirements in the chemical industry
- MAG 3100 P available as quick ship variant
- MAG 3100/MAG 3100 HT sensor for general process industries
- MAG 1100/1100 HT sensor for general process industries
- MAG 1100 F sensor for food and beverage and pharmaceutical industries

© Siemens 2024

**Battery-operated water meters: SITRANS FM MAG 8000/MAG 8000 CT (DN 25 to DN 1200)**

- Battery lifetime of up to 15 years*
- IP68 (NEMA 6P) enclosure and sensor painting in accordance with ISO 12944 class C5M (up to 15 years protection) corrosivity for burial and submerged applications
- Easy installation without straight inlet/outlet
- Rich add-on communication modules: Modbus RTU, encoder card, 3G/UMTS module and IIoT Wireless communication module
- IIoT Wireless Communication Module consisting of a hardware part and a Web-hosted application for device management and measurement data transfer
- Remote configuration of all parameters, remote diagnostics

**SITRANS FM MAG 8000 with 3G/UMTS module**

- Built-in Remote Qualification Certificate enables comprehensive device diagnostics and off-site audits
- Configurable analog input for external ratiometric pressure transmitter
- MAG 8000 clock synchronization with Internet NTP server

**High-powered AC meters: SITRANS FM TRANSMAG 2 / (DN 15 to DN 1000)**

- Specially designed for heavy mining slurries with or without magnetic particles as well
- Also suitable for the most difficult applications in the pulp and paper industry
- Low conductive medias ≥1 µS/cm (0.1 µS/cm depending on medium)
- No movable parts
- Stable zero point/pulsed alternating field for accurate flow signal and excellent signal strength
- SmartPLUG concept
- Comprehensive self-diagnostics

**Threaded SITRANS FM100: Making engineering and design even simpler**

- Measuring and monitoring small and medium flows. Robust stainless steel design (threaded: 1/2", 3/4", 1", 2")
- Generation of two process values, simultaneous flow and temperature measurement
- Dosing function with external control input
- Four optical buttons, easy local operation in the field possible with gloves
- The display can be electronically rotated in 90° steps
- Bidirectional measurement
- Integration in many standard applications possible, since there are two individually configurable outputs (pulse/frequency/alarm and analog output)
- Total and partial volume counters to track flow rates
- IO-Link communication available

*for 4 D-cell external battery pack

© Siemens 2024

## SITRANS FS – Flow Sonic

Our ultrasonic flow measurements work as inline systems or with clamp-on.

### Inline systems

Inline systems come into contact with media and are mostly complete and calibrated pipe segments. Suitable for operational measurements in industrial areas and heat quantity measurements that are subject to billing, but can also be retrofitted in existing systems.

**SITRANS FS SONO 3100 / SONO 3300**

- Suitable for water applications in sizes DN 50 to DN 500
- Available as 1- or 2-path systems in combination with SITRANS FUS060 transmitter
- Choice between mild steel and stainless steel on request
- Sensors can be exchanged without interrupting operation

**SITRANS FS SONOKIT**

- The SONOKIT system is designed for inline retrofitting on existing water pipelines up to DN 1200 as a 1- or 2-track flowmeter
- For use with the dedicated SITRANS FUS060 transmitter (up to DN 500) or battery-powered FUS080 transmitter (up to DN 1200)
- The unique design enables installation on empty pipes or pipes under pressure without process shutdown
- Robust version can be buried and withstands constant flooding
- Outstanding accuracy; the bigger the pipe, the more accurate the result

**SITRANS FUS380 and FUE380**

- FUE380 for billable energy measurements according to MID004
- FUS380 for industrial billing measurements without MID004 requirements with more extensive measuring ranges available
- FUS/FUE380 in dual-track version for measuring water flow in district heating systems, local networks, boiler stations, substations and other general water applications
- Also suitable for chiller plants (including glycol mixes without type approval)
- Suitable for pipe diameters from DN50 to DN1200 and approved for billable heat measurements with official approval (MID MI-004)
- With SITRANS FUS 080 transmitter for battery or mains power supply, battery life up to 6 years
- Ideal for energy metering together with the SITRANS FUE950 energy calculator
- With heat meter type approval for FUE380 (MID MI-004)

© Siemens 2024

## SITRANS FS – clamp-on ultrasonic flowmeters

Clamp-on is the ideal technology for retrofits in existing systems. Sensors can be strapped onto existing pipes without disrupting or stopping the process. Since these sensors measure without direct contact with the liquid, this type of measurement is also becoming increasingly important for new systems. The transmitter is designed for very fast and highly accurate measurements. Up to four measuring paths per pipe enable significantly better flow-profile recording even under non-ideal measuring conditions and thus results that only calibrated measuring devices actually deliver.

**SITRANS FSS200 –**
**clamp-on sensor family**

- Available as high-precision, universal and high-temperature sensor
- High-precision sensor: typical Lamb-wave sensors, working in harmony with steel pipes; selection according to pipe wall thickness; mandatory for oil and gas as well as other liquids when accuracy is required; different sizes with different frequencies for wall thickness up to 35 mm
- High-temperature sensor: for applications up to 230°C
- Universal sensor: for portable purposes and non-steel pipes, but also for steel pipes with lower performance and accuracy requirements; available in five basic sizes for pipes up to DN 6000 and special versions for difficult applications
- Suitable material for simple and permanent mounting, even with different requirements

**SITRANS FS290 –**
**portable clamp-on system**

- With FSS200 ultrasonic flow sensor family 200 (clamp-on) and FST090 ultrasonic flow transmitter
- For quick and easy checking of the flow in pipes
- Portable SITRANS FST090 transmitter in use with SITRANS FSS220 clamp-on sensors
- For pipes up to DN5000 and a wall thickness up to 40 mm, for temperatures of 120°C or higher
- Operation with mains unit or alternatively with rechargeable batteries for more than 24 hours
- Time-limited measured value monitoring and control measurement to validate built-in flow meters
- Four pushbuttons, illuminated graphical display, 240 x 160 pixels
- Inputs/outputs, Communication Modbus RTU RS 485, USB service port, 4GB SD-Card

© Siemens 2024

**SITRANS FS230 with FSS200 sensors and FST030 transmitter**

- Designed as a wall housing (Ex zone 2) or as an industrial housing (Ex zone 1) with external DSL
- External Digital Sensor Link (DSL) contains 4-path measured value electronics and generates the measured value directly with the FSS200 sensors
- High-precision measurement of slightly viscous liquids (industrial version), different crude oil mixtures or petroleum products with temperature, pressure and viscosity consideration (oil version), natural and industrial gases from approx. 8 bar (gas version)
- WideBeam® transit time technology with FSS200 high-precision sensors for high accuracy and the best signal quality in all areas of use
- Transmitter electronics for billable measurement accuracy better than 0.15%
- Anomaly tool, patented bi-directional flow profile correction for anomalies in the upstream and downstream areas of the pipe
- High EMC security and secure digital data transmission to the transmitter, up to 150 m and more

**SITRANS FS220 – with FSS200 sensors and FST020 transmitter**

- For simple measurement tasks with one pair of sensors (single-path) and a practical accuracy of 1%.
- Highly reliable, cost-effective system for simple accuracy
- Enhanced zero stability results in minimal need to set a zero point, ideal for use in municipal utilities for network monitoring and leak detection
- Frequently used in the water and wastewater sector, for energy and HVAC as well as in the chemical industry (non Ex)
- WideBeam® transit time technology with FSS200 universal and high-precision sensors

© Siemens 2024

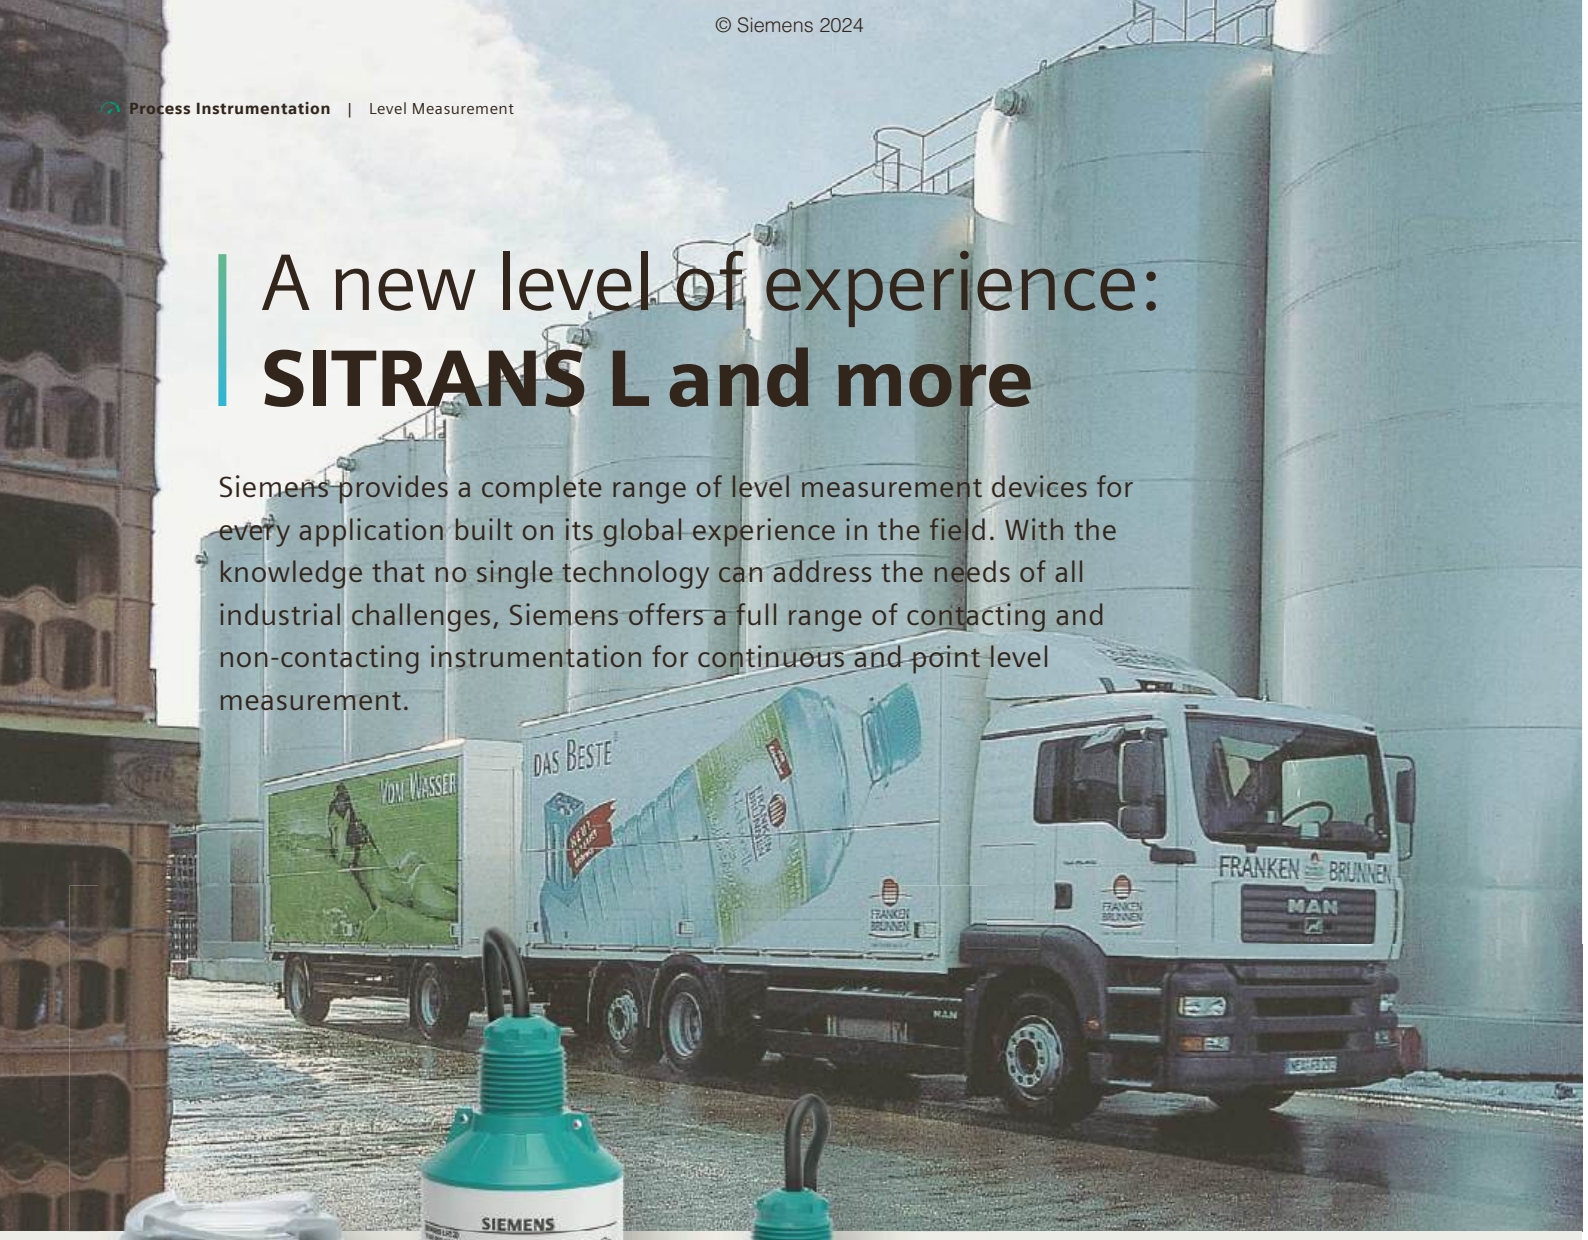
## SITRANS FP differential pressure flow measurement

The SITRANS FP product line offers a complete solution for differential pressure flow measurements. SITRANS FP330 and SITRANS FPS230 are both suitable for a vast range of different applications under various process conditions and parameters.

**SITRANS FPS230/FP330**

- Flexible mounting
- One pressure transmitter for all applications
- Single source supplier for the hole measuring point
- Pre-mounted flowmeter delivered in “one box”
- Easy traceability throughout the ordering process

**SITRANS FX330**



- Accurate measurement of steam, gas, and both conductive and non-conductive liquids
- Available in sizes DN 15 to DN 300 mm
- Integrated pressure and temperature compensation for lower installation costs and increased accuracy
- Integrated reduction of nominal diameter results in a large turndown ratio, reducing installation costs and potential for leakage
- Provides redundant storage of all calibration and configuration data within the display memory and the electronics module
- Designed from the ground up to be fully compliant with the IEC 61508 SIL 2 safety standard
- Cost-efficient energy calculation including net heat measurement
- Remote version available with cable length up to 50 m

© Siemens 2024

# A new level of experience: **SITRANS L and more**

Siemens provides a complete range of level measurement devices for every application built on its global experience in the field. With the knowledge that no single technology can address the needs of all industrial challenges, Siemens offers a full range of contacting and non-contacting instrumentation for continuous and point level measurement.

**SITRANS LR100 series –**
for hassle-free level measurement

- Compact 80 GHz radar transmitter for liquid and solid applications
- Featuring Bluetooth® wireless technology for easy and quick setup with Siemens SITRANS mobile IQ App
- Ideal for chemical storage vessels, bulk solids hoppers, produced water and drilling mud

© Siemens 2024

## Continuous level measurement

Continuous level measurement constantly monitors dynamic processes. The measurements are transmitted as an analog signal or digital value. We offer a wide range of transmitters based on a variety of technologies, including ultrasonic, radar, guided wave radar, capacitance, gravimetric and hydrostatic.

## Process intelligence

The signal processing technologies differentiate between the true echo from the material and false echoes from obstructions or electrical noise. The sophisticated software is supported by field data gained from more than a million applications. This in-depth knowledge and experience is built into the software's advanced algorithms to provide intelligent processing of echo profiles. The result is a repeatable, fast and reliable measurement.

**SITRANS LR250**

- 2-wire, 25 GHz pulse radar level transmitter up to a range of 20 m
- For liquids and slurries in storage and process vessels with high temperatures and pressures
- 316L stainless horns, flanged antenna with PTFE facing and budget-friendly polypropylene lens and flange options for versatile applications

## Radar level measurement with intelligent signal processing

- Non-contacting and low-maintenance
- Microwaves require no carrier medium for precise measurements even under harsh process conditions
- High performance and easy implementation using just a few parameter entries

**SITRANS LR560**

- The world's first 78 GHz level transmitter
- 2-wire, 78 GHz FMCW for ranges up to 100 m (328 ft)
- Very narrow 4-degree beam angle with 3" lens antenna
- Aiming flanges with purge, easy to install
- Integrated Process Intelligence and plug-and-play performance

**SITRANS LR200**

- 2-wire, 6 GHz pulse radar level transmitter for liquids with a range of up to 20 m
- Ideal for process vessels with turbulence and heavy deposit, as well as high temperatures and pressures with a range of up to 20 m

© Siemens 2024

## Ultrasonic level measurement

Our market-leading ultrasonic level measurement is an extremely cost-effective solution. The self-cleaning face makes it suitable for harsh environmental conditions. The non-contacting technology is used in numerous industries to monitor liquids, bulk solids and slurries.

**SITRANS Probe LU240**

- Cost-effective, compact, intelligent level solution for liquid chemical inventory, monitoring small process vessels and level monitoring measurement in the environmental industry

**Echomax transducers**

- Fully encapsulated robust ultrasonic transducers for use with Siemens ultrasonic controllers
- Various approvals for use in hazardous applications
- Self-cleaning face for harsh applications with buildup

## Level controllers

Our product portfolio of level controllers feature intuitive navigation via the local user interface and are ideal for applications in all industries. Whether you need the world's highest accuracy in your open channels, rugged wet well pump control or dual point monitoring, Siemens controllers have you covered.

## Continuous capacitance

Our unique inverse frequency shift approach to capacitance technology ensures accurate, reliable and repeatable measurements, even in dusty, turbulent and vaporous environments or in situations with product buildup. Because even a small level change creates a large change in frequency, our instruments provide better resolution and consistently outperform conventional devices. With special features such as Active-Shield technology, they protect the measurement from the effects of moisture, vapors, foam, temperature and pressure variations, and buildup. Together with the modular probe options available on various models, they offer practical solutions to a wide variety of continuous level and interface applications.

**SITRANS LC300**

- Ideal for standard and industrial applications in the chemicals, hydrocarbon processing, food and beverage, mining, aggregate and cement industries

© Siemens 2024

## Guided wave radar

SITRANS LG guided wave radar transmitter for a range of contact level and interface applications from general to harsh conditions and everything in between. With little to no configuration necessary you'll be operational in minutes, saving you time and money.

Extreme process conditions don't stand a chance, and these transmitters feature SIL options for applications requiring functional safety. Advanced diagnostics including trending, profiles and event logging give you the data you need at every step of your process. Rapid response times and advanced echo processing deliver accurate and reliable readings over the full application range, even in small containers and in low dielectric constant material. And with field-replaceable and adjustable probes, if your process changes, your measurement device can, too.

**SITRANS LG240**

- For use in hygienic and corrosive applications

**SITRANS LG250**

- Highly flexible solution for liquid level and interface applications. Extremely versatile for many applications

**SITRANS LG260**

- Ideal for measuring the level in medium-range solids applications, including grains, plastics and cement

**SITRANS LG270**

- Offers configuration options for extreme conditions, including high-temperature and high-pressure applications

**All versions include:**

- Automatic buildup adjustment
- Remote display and electronics options
- 2 mm accuracy
- Backlight with full graphic display, top- or side-mountable
- SIL 2/3 approval options
- Field-replaceable probes
- Quick setup wizards
- USB service port option

## Hydrostatic

Low-cost level measurement for direct mounting or mounting with remote seals on tanks and vessels

**SITRANS LH100 and SITRANS P DS III**

- Suitable for a wide range of applications in the chemical and petrochemical industries
- Highly resistant to extreme chemical and mechanical loads as well as electromagnetic interference

## Gravimetric

Gravimetric level measurement with SIWAREX weighing technology offers highly precise measurement without material contact independent of medium temperature, tank shape, built-in parts or material characteristics.

**SIWAREX WP321**

- Technology module for the SIMATIC ET 200SP distributed I/O system
- For level measurements in silos and bunkers; convenient and seamless integration of platform scales directly into the automation environment

© Siemens 2024

## Point level detection

We offer you a comprehensive portfolio for extremely reliable and precise point level detection. Our wide selection includes ultrasonic, rotating and vibrating level switches as well as RF capacitance switches with inverse frequency shift technology that are cost-effective and suitable for point level, interface detection, dry run and safety back-up applications including bulk solids, liquids and slurries.

**Vibrating, rotary paddle**

- Especially suitable for low bulk density applications
- Ideal for use in harsh and abrasive environments, thanks to their rugged design
- For detecting high, low and demand levels in solids, liquids and slurry applications
- A wide variety of configuration options makes them suitable for any environment
- Simple to use with no complicated setup or configuration
- Stainless steel, aluminum and plastic enclosure options and highgrade steel process connections provide exceptional resistance to mechanical forces, a long service life and low cost of ownership
- Options for SIL 2 / redundant SIL 3

**SITRANS LPS200**

- Rotary paddle switch that detects solids with densities as low as 15 g/l
- Motor protection
- SIL 2 certification for best-in-class reliability and performance
- Options for fail-safe rotation monitoring and alarming

**SITRANS LVL100 and LVL200**

- Vibrating level switches for liquid and slurry applications, including high, low and demand level alarms and pump protection
- Wide application range including high temperatures and pressures, hygienic versions, large variety of enclosure materials, SIL 2/redundant SIL 3 options and remote testing

**SITRANS LVS100, LVS200 and LVS300**

- Vibrating level switches that detect solids with densities as low as 5 g/l
- Best-in-class sensitivity detection
- Ability to handle and monitor buildup
- Options to detect solids interface within a liquid

© Siemens 2024

## RF Capacitance

Pointek RF capacitance point level switches measure interfaces, solids, liquids, slurries and foam. The inverse frequency shift technology provides accurate and reliable measurement results even in dusty, turbulent and vaporous environments or in applications with product buildup. Small changes in level create large changes in frequency. Consequently, Pointek devices have greater sensitivity and consistently outperform conventional devices. With their rugged aluminum or chemically resistive plastic enclosures and wide variety of process connections, Siemens Pointek switches are compatible with most applications

**SITRANS LCS100, LCS050 and Pointek CLS100**

- Suitable for level detection in constricted spaces
- Options available
- Starting from 1/2 inch process connections
- IO-Link communication
- M12 connector
- Sensguard protection of probe for harsh and abrasive environments and chemically resistive probe types available

**Pointek CLS200 and CLS300**

- Suitable for level detection in demanding conditions with high pressures and temperatures
- Suitable for aggressive applications including very high temperatures and pressures
- SIL 2 options
- Smart PROFIBUS versions with digital display
- Remote operation via PROFIBUS for status and function testing
- Remote detection of buildup and monitoring of other process condition changes

## Ultrasonic

**Pointek ULS200**

- Non-contacting ultrasonic level switch with two switch points
- Ideal for sticky materials and an effective solution for bulk solids, liquids and slurries

© Siemens 2024

# Always in pole position: **SIPART Positioners**

As the interface between control system and valves, positioners play an important role in ensuring reliability and optimal performance in process plants around the world. Our proven portfolio with the SIPART PS2 and SIPART PS100 precisely controls the entire range of valves and masters even special tasks with absolute reliability.

**SIPART PS100** – easy to use, fast to commission and simply robust

- One-push initialization: fast commissioning at the push of a button
- Application parameters to select different modes of valve positioning, such as exact, fast, on-off or booster
- Internal non-contacting sensor: non-wearing and vibration-resistant
- Non-corrosive sound absorber for use in harsh environments
- Plain-text display with status icons in accordance with NAMUR NE107 and four operation buttons
- Remote operation via smartphone or tablet with retrofit-table Bluetooth adapter and SITRANS mobile IQ app

© Siemens 2024

**SIPART PS2 – the all-around positioner**

SIPART PS2 has grown to become the most widely used positioner for linear and part-turn actuators. It is constructed to meet a wide variety of requirements:

- Polycarbonate, aluminum or stainless steel enclosure
- 316L stainless steel enclosure for nearshore, offshore as well as oil and gas applications in hazardous areas
- Ex d explosion-proof version
- Communication via PROFIBUS PA, FOUNDATION Fieldbus or HART
- Integrated booster option for quick control of large drives
- Low operating costs thanks to minimal air consumption

**More functions, more possibilities**

SIPART PS2 comes with an extensive range of functions and diagnostic capabilities, which we have improved even further:

- Optional pressure sensors: improved valve diagnostics and parameter monitoring
- Ready for digitalization: fast and predictive determination of valve maintenance requirements using the valve monitoring app
- Regular partial stroke tests: ensured movement of emergency shutdown (ESD) valves and other open/close valves in the event of an emergency
- Fail in Place: the valve remains in its last position upon loss of electrical and/or pneumatic power
- Fail Safe: the valve moves to the safety position; also suitable for SIL2 applications
- Valve perfomance tests (VPT): immediate, on-site assessment of valve maintenance requirements

**Positioner with remote control electronics**

- Suitable for use in environmental conditions with high-energy radiation

**Positioner with various external position transmitters**

- Easier access to positioner for valves at not easily accessible locations

© Siemens 2024

# Early detection **protects** your process

Process protection devices can be used as early-warning systems to avoid costly interruptions and breakdowns of equipment. They detect flow problems, blockages, screen faults, machinery slowdowns or burst filter bags. Their rugged construction makes them impervious to dust, dirt, buildup and moisture.

**SITRANS AS100 –** acoustic sensor used for solids flow detection, featuring a compact, stainless steel construction for harsh environments and non-invasive mounting

- Detection of high-frequency acoustic emissions from friction or the impact of dust, powders, granulates and other solids
- Signaling of flow/no flow or high/low flow
- Compatible with SITRANS CU02, which processes signals from the sensor
- Provision of relay and analog outputs for connection into a process or direct connection to a PLC analog output

© Siemens 2024

## Acoustic sensors

Non-invasive acoustic sensors detect inaudible, high-frequency acoustic emissions generated by friction and impact, caused by materials in motion.

**SITRANS DA400**

- Acoustic analyzer for condition monitoring of oscillating displacement pumps
- Simultaneous and continuous monitoring of up to four independent delivery valves
- Easy system operation and configuration either locally by LCD and keyboard or via PROFIBUS DP/PA

## Motion sensors

Non-contacting motion sensors detect changes in motion and speed of conveying, reciprocating and rotating machinery.

**SITRANS WM100**

- For detecting the absence or presence of motion of rotating, reciprocating and conveying equipment
- Heavy-duty alarm switch

**SITRANS WM300 MFA**

- Motion failure alarm (MFA), differential speed detection (DSD) and non-contacting tachometer (NCT)
- Multiple alarms powered by four relays for overspeed or underspeed conditions from the sensors
- Intuitive programming thanks to a simple menu structure, along with an on-board display and push buttons

**Milltronics MFA 4p**

- Plant protection through the detection of absence of motion, as well as underspeed or overspeed conditions
- Probes usable in hazardous, high-temperature and harsh conditions, thanks to their superior design
- With MSP or XPP probes

## Process controllers

SIPART DR controllers are outstanding thanks to their extreme reliability and ease of use. Various software packages are available to make their handling easy and intuitive and to extend their scope of application. The standard version already offers comprehensive controller hardware that can be upgraded quickly and easily for specific applications by means of a large number of optional input and output modules. Plug-in modules for communications over RS 232/RS 485 or PROFIBUS DP are also available.

## Process recorders

SIREC D200, 300 and 400 display recorders are used for continuous monitoring of process quantities, plant maintenance, process optimization or troubleshooting. Our complete range of process recorders offers state-of-the-art solutions for the most demanding requirements.

© Siemens 2024

# Information **where it is needed**

Supplementary components enhance your operations through seamless wireless communications, remote displays and remote monitoring solutions. Data capturing and alarming anywhere, at anytime? Remote monitoring is your answer. Opening up new communications options? WirelessHART meets that challenge. Whatever your need, Siemens' supplementary components are here to help.

Four versions are available:

- RTU3010C – only IE interface
- RTU3030C – 3G modem integrated
- RTU3031C – 3G modem and GPS modem integrated
- RTU3041C – 4G modem and GPS modem integrated

**SIMATIC RTU3000C**

The compact remote terminal unit enables remote measuring points, even when no local power grid is available

- Easy configuration using a Web browser instead of programming
- Flexible power supply from batteries, solar energy or 24 V DC
- Connection of process instrumentation by means of integrated digital or analog inputs (4...20 mA) or HART and Modbus RTU devices via Extension Board HART/RS485
- Works with every instrumentation via 4...20mA, HART and Modbus RTU
- Secure communication via integrated mobile wireless modem or via LAN port and industrial router such as SCALANCE M
- Extended temperature range from –40 °C to +70 °C as well as an optional enclosure meeting the IP68 standard
- Perfect companion for SITRANS serve IQ (csv files & emails) or direct interaction to Mindsphere apps (such as SITRANS store IQ) with MQTT native communication

© Siemens 2024

## Remote digital displays

The universal remote digital displays allow users to view and access measurement data remotely from a convenient location. Our advanced range of remote displays includes options for pump control with communications including HART and Modbus RTU with flexible output options.

**SITRANS RD150**

- Remote display for 4 to 20 mA and HART devices
- Easy-to-use basic configuration of HART instruments using HART commands
- Ease of use through backlit menu-driven display with four buttons and flexible mounting options

**SITRANS RD200 and RD300**

- Universal and full-featured versions
- Ideal for flow rate, total and control applications as well as for use with most field devices
- Data logged and displayed on the PC with the free RD software
- Sunlight-readable display
- Standard serial communications output (Modbus RTU)
- Pump alternation control, linearization and square root and math functions

**SITRANS RD100**

- Loop-powered display
- Suitable for level, flow, pressure, temperature and weighing applications
- Can be used in a large variety of environments (low/high temperatures, hazardous areas)
- Simple setup and installation

**IE/PB Link PN IO**

- Can constitute the gateway between PROFINET and PROFIBUS
- From the IO-controller viewpoint, all DP slaves are treated like IO devices with a PROFINET interface
- Use as a data records router for parameter assignment of field devices via SIMATIC PDM (Process Device Manager) in all plants with PROFIBUS DP

© Siemens 2024

# Fully exploit the potential of **your process data**

From design and commissioning to operation and performance monitoring – Siemens provides software, tools and services for digitalization in every phase of a plant's lifecycle. End-to-end digitalization from a single source optimizes plant operations by reducing downtime and improving cost efficiency.

## Ensure Asset Uptime

- AE Thyro App
- Asset Performance Suite
- Valve Monitoring
- SIMATIC PCS myExpert
- SITRANS SCM IQ
- Siemens Predictive Analytics
- SIWA Burst
- SIWA LeakPlus

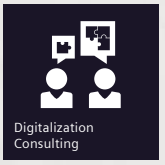
## Improve Processes

- Control Performance Analytics
- Process Event Analytics
- eBatch Reviewer
- Water Quality Inspector
- SieTrace
- SIWA Optim Dynamics
- SIWA Blockage Predictor
- SIWA Optim
- SIWA Pump Guardian

© Siemens 2024

The smart interaction of our digital services and extensive portfolio of applications gives you complete transparency over the entire plant lifecycle. Select the right app suite to investigate root causes quickly, allocate resources efficiently and achieve significant cost savings. Take advantage of advanced data analytics that provide easy and secure collection and processing of plant data, allowing you to implement optimization measures and reach the highest operational efficiency.

## Manage Operations



## Digital Services

# **SITRANS IQ** lets you talk with your plant

An immense amount of condition data is generated in a process plant. Our SITRANS IQ portfolio extracts this data, evaluates it and edits it according to the specific needs of the operator. This sets completely new standards for improving processes.

Our SITRANS IQ portfolio provides a flexible, scalable suite of solutions to capitalize on your already smart instrumentation. Typically, we only read a primary variable from these smart instruments and dig deeper once we have a problem. But there is an immense amount of other valuable, but unused condition data in a plant. Why not read this stranded data and prevent problems in commissioning, operation or maintenance? Our SITRANS IQ connectivity solutions establish a second data channel to access stranded data without affecting your process.

Free yourself of routine tasks like manually capturing remote measurements, monitoring thresholds yourself or doing extra rounds to check your mechanical assets. SITRANS IQ sets completely new standards for improving processes, enabling predictive maintenance and increasing plant performance. Start now!

**SITRANS SCM IQ**

SITRANS SCM IQ provides smart condition monitoring for mechanical plant assets to detect imminent equipment failures and prevent unexpected plant downtimes.

- Condition monitoring of all vibrating or rotating plant components, such as pumps, compressors, gearboxes, agitators, etc.
- Mechanical assets are equipped with SITRANS MS200 multisensors and a SITRANS CC220 industry gateway for data collection and transmission
- Already existing smart machinery with data integration in Siemens MindSphere can also be monitored
- Analysis of condition data based on artificial intelligence, allowing early detection of potential failures before they occur
- Event-related warnings enable predictive maintenance
- Graphical status display of monitored assets in SITRANS SCM IQ app

© Siemens 2024

### SITRANS store IQ

SITRANS store IQ is a cloud-based tool for intelligent inventory monitoring and management.

- Real-time monitoring of fill levels, for example of tank farms or silos, as well as stock levels on shelves
- Variety of scaling possibilities like strapping table, linear scaling function or via silo geometries
- Configurable dashboard allows adaptation to every specific use case scenario
- Alarms and notifications via SMS or e-mail
- Possibility to integrate a wide range of measured variables and technologies providing extra information beyond inventory
- Benefits from broad Siemens MindSphere connectivity options – data transmission directly from HART devices but also from PLC level

### Analyzer System Manager (ASM)

ASM is a monitoring & optimization solution for process analyzers.

- Monitoring of all analyzer-related assets
- Analysis of measurement values and device data for anomalies
- Execution and evaluation of validation/calibration data
- Maintenance management
- KPI reporting

### SITRANS serve IQ

The server-based SITRANS serve IQ application is used to acquire and monitor process data from remote measuring points.

- Suitable for all remote measurements, including flow, level or pressure, in industrial or municipal applications, for example for environmental or customer reporting needs
- Data transmission to local server (on premises) via mobile network, such as 3G or 4G
- Access to measurement data via Web browser application, with overview of device locations and detailed trend recording of all process values
- Integration into existing SCADA system possible through standard interface

### SITRANS AID IQ

SITRANS AID IQ is an on-premise solution to predict the need for maintenance of Siemens Analyzer.

- Provision of diagnostic data of each analyzer to evaluate health status
- Analysis of diagnostic data to predict device downtime
- Provision of service recommendations
- Access via HMI or Web-based application
- Plug & play principle for easy comissioning

### SITRANS mobile IQ

SITRANS mobile IQ is a free app for easy commissioning, parameterization and monitoring of Bluetooth-enabled field instrumentation via smartphone or tablet.

- Automatically detects and displays all supported and difficult-to-access field devices in the vicinity
- Convenient quick commissioning or detailed setup, including graphical support
- Displays device status and profile of selected measured and diagnostic values
- Currently supported field devices:
  - SITRANS LR1xx series
  - SITRANS Probe LU240 with retrofittable SITRANS AW050 Bluetooth adapter
  - SIPART PS100 with retrofittable SITRANS AW050 Bluetooth adapter
- Free download: www.siemens.com/siossitransmobileiq

# **Seamless data flow** throughout the entire lifecycle of your plant

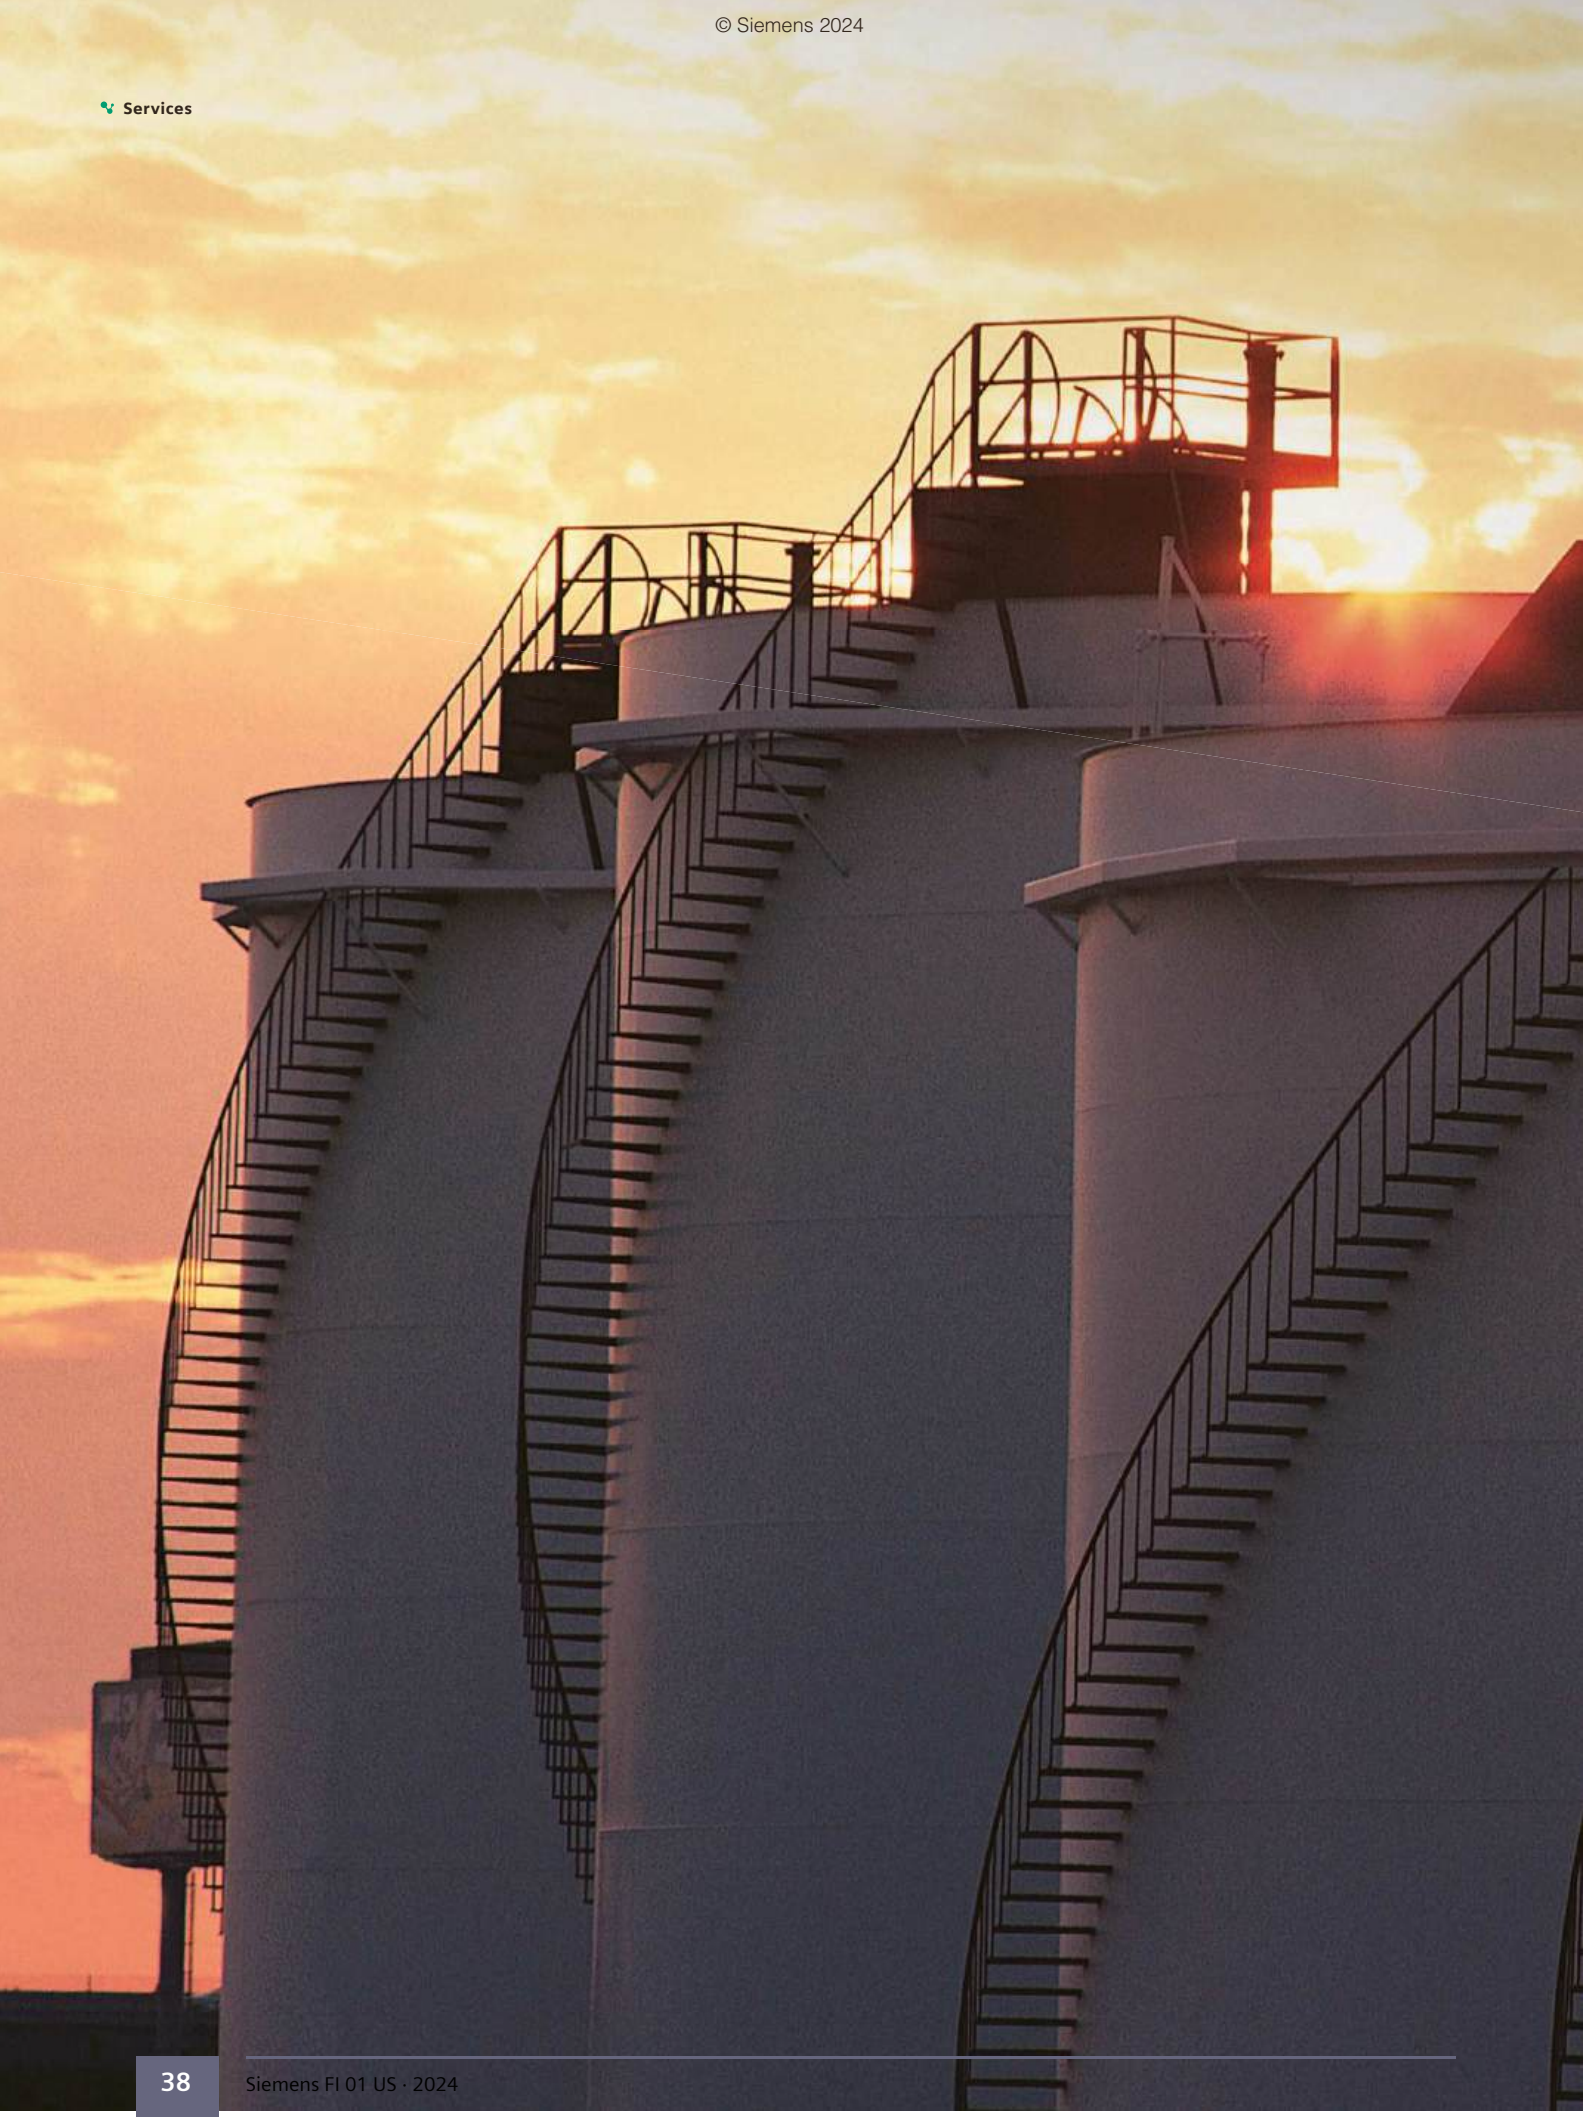
Empower your data! Clever, integrated engineering tools and solutions such as COMOS and SIMIT let you take control – and greatly increase the efficiency of processing and manufacturing plants.

**SIMIT**
The SIMIT simulation platform enables comprehensive tests of automation applications and provides a realistic training environment for operators even before the real startup. This creates opportunities for process optimization and know-how retention, which results in a reduced commissioning time and significantly shortened time-to-market.

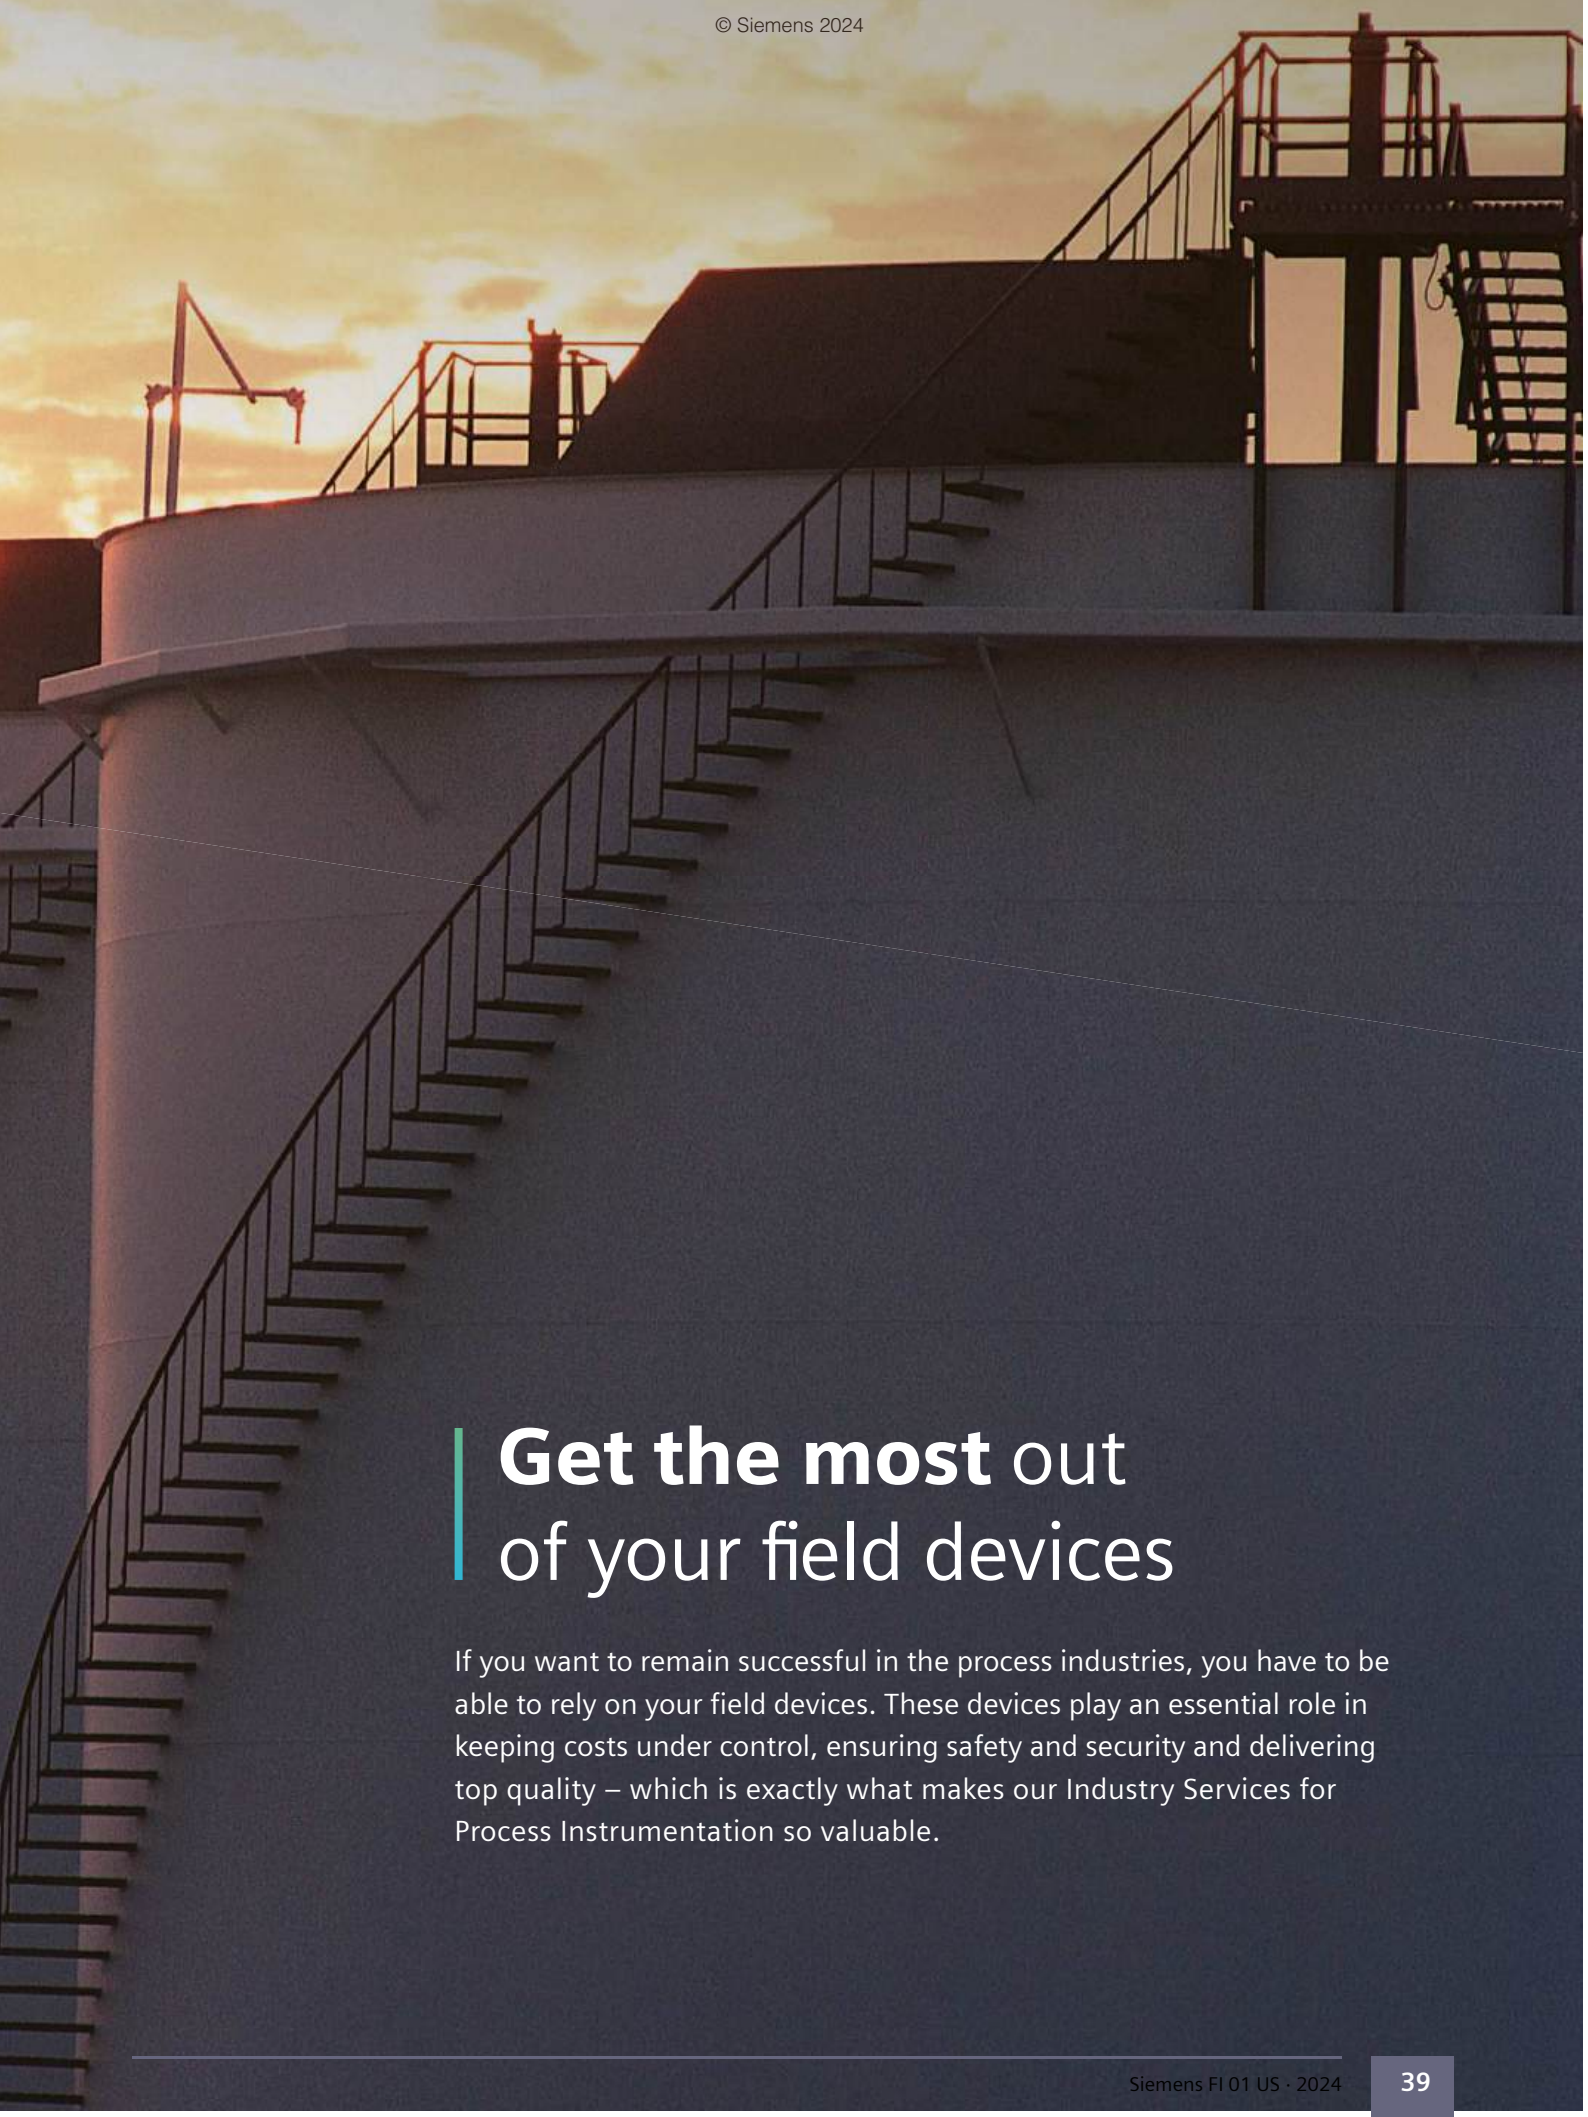
**COMOS**
COMOS is the engineering tool from Siemens for the entire lifecycle of your plant. Through direct integration of our PIA Lifecycle Portal, we guarantee the seamless integration of our field devices in the engineering environment. We can offer you the field devices best suited to your processes, properties and measuring requirements.

**PIA Lifecycle Portal**
This portal helps you select, size and configure your ideal piece of instrumentation. Interfaces to COMOS and exports to the online ordering portal of Siemens: the Industry Mall (mall. industry. siemens.com). You are able to track the lifecycle of your instrument, see warranty and extended exchange option information as well additional information such as factory certificates (for example for calibration or validation).

© Siemens 2024



**SITRANS Library**

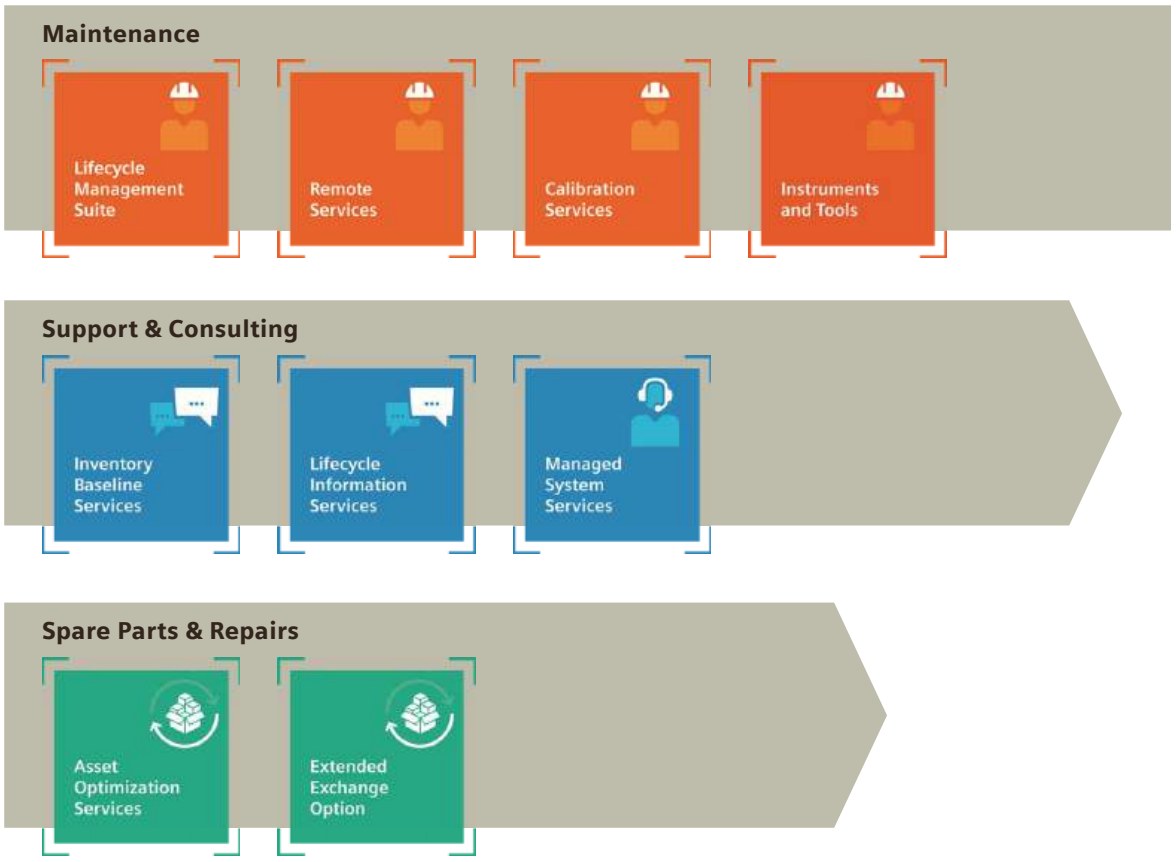


- Easy use of device-specific functions and data from devices of the SITRANS and SIPART product families, such as dosing or totalizer functions in solutions with SIMATIC PCS 7
- Library with device-specific function blocks, block symbols and faceplates
- Fully compatible with SIMATIC PCS 7 Standard Advanced Process Library (APL) throughout the entire lifecycle, from engineering to running of the plant

© Siemens 2024

© Siemens 2024

# **Get the most** out of your field devices



If you want to remain successful in the process industries, you have to be able to rely on your field devices. These devices play an essential role in keeping costs under control, ensuring safety and security and delivering top quality – which is exactly what makes our Industry Services for Process Instrumentation so valuable.

© Siemens 2024

# Individually adaptable range of **expert services**

Whether you want to protect your investments, ensure the availability of your plant, plan your maintenance costs over the long term or modernize your plant at optimized costs – with our comprehensive range of services and support for all aspects of process instrumentation, we provide you with an efficient lever for achieving these goals. Our modular service portfolio can be tailored precisely to your specific requirements.

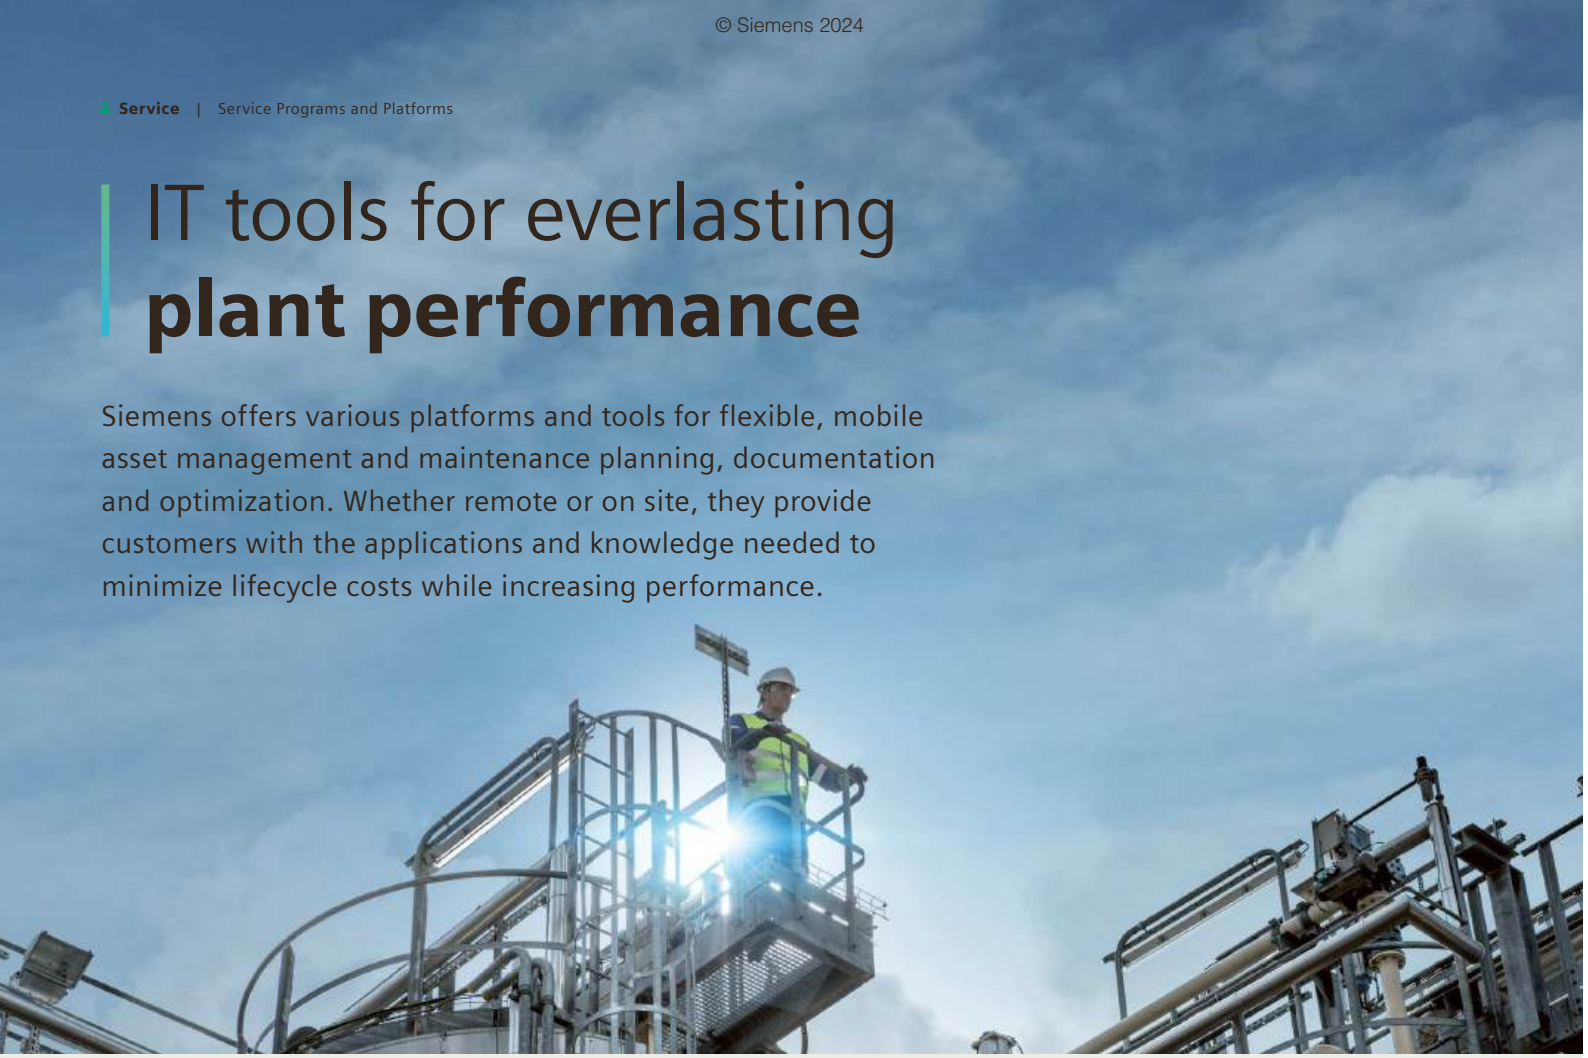
© Siemens 2024

**Maintenance**
Maintaining field instruments is time-consuming, labor-intensive and – depending on whether it's performed inside or outside explosion-risk zones – involves a substantial outlay. In addition, the ever-growing demands for IT security play an increasingly important role. Our range of on-site services, platform-based remote services and comprehensive calibration services supports you in all your activities, from engineering and commissioning to maintenance.

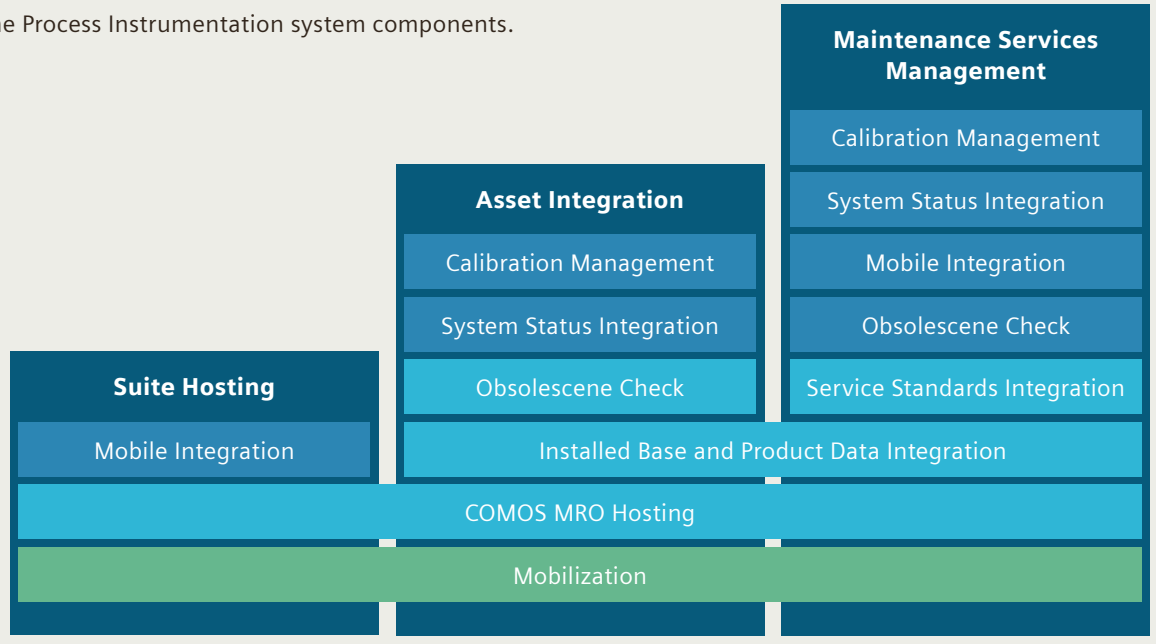
**Support and consulting**
Siemens' Inventory Baseline Services and Lifecycle Information Services provide convenient and powerful portfolio elements for your installed base. We offer a comprehensive training program for design, operation and maintenance personnel that can take place either at the Siemens Training Center or on your premises. Managed System Services are focused on the efficient, centrally coordinated processing of complex support requests. They not only make all service and support activities transparent, they also significantly reduce service time.

**Spare parts and repairs**
Asset Optimization Services take a structured, systematic approach to the comprehensive optimization of your supply of spare parts. With the Extended Exchange Option, you can protect any Siemens process instrumentation products you order from unforeseeable repair costs.

**Lifecycle services contracts**
A modular lifecycle services contract is composed of defined service elements and contract-specific parameters. Long-term investment protection and assured of serviceability are the essential benefits of a contract solution.



© Siemens 2024



# IT tools for everlasting **plant performance**

Siemens offers various platforms and tools for flexible, mobile asset management and maintenance planning, documentation and optimization. Whether remote or on site, they provide customers with the applications and knowledge needed to minimize lifecycle costs while increasing performance.

**Lifecycle Management Suite**

The Lifecycle Management Suite optimizes plant maintenance during the planning, execution and documentation of all service activities. The pre-configured, COMOS MRO-based system provides Standard Operating Procedures (SOPs) for lifecycle services that are already assigned to the SIMATIC PCS 7 and the Process Instrumentation system components.

**Lifecycle Management Suite** – Module structure

© Siemens 2024

## Mobile Asset Management Program

Our SIPIX-based Mobile Asset Management Program is your virtual service technician for flexible process monitoring and optimized maintenance. It enhances service efficiency in every phase of the plant life cycle: from data acquisition of the installed base and mobile processing of maintenance orders to augmented reality-supported remote services by Siemens or manufacturer-independent experts. The platform series is robust, powerful and preconfigured with many service apps, making it ready for efficient service operations at the field level or for remote service access.

### Engineering

If required, the project engineer can involve a Siemens expert in a specific task at short notice so that they can solve it together on the same screen. The Siemens expert also has the possibility to guide the project engineer through the engineering tool and to make entries independently.

### Commissioning

Devices that have already been installed are not yet connected to the higher-level control system. In addition, there are often no networks available for communication with the outside world. This is where our Remote Assisted Collaboration approach comes into play. The SIPIX SD Tablet offers numerous communication options.

### Maintenance

In general, maintenance is mostly carried out on site at the unit and in the installed state. This makes it particularly difficult to call in experts from outside during the maintenance phase. Here, Remote Assisted Collaboration based on SIPIX SD offers a wide range of options for technical support by a Siemens expert.

**Field device management**

Wireless connection via Bluetooth HART modem for parameterization and trouble-shooting of process instrumentation with SIMATIC PDM

**Recurring mobile maintenance**

Targeted maintenance with the COMOS mobile app and standard checklists with the aid of the Lifecycle Management Suite

**Installation, commissioning, operation and modernization**

Versatile use of the SIPIX tool in every phase of the plant life cycle – in the PLC/control room, over networks via Wi-Fi, point-to-point directly to assets such as field devices, etc.

**Universally expandable**

Application-specific and customer-specific use cases are possible by installing additional software tools and using existing interfaces such as RFID HF readers, GPS and Bluetooth

**Remote services**

Fully integrated remote service solution for on-site support with the SIPIX RC video/audio app using the remote infrastructure of Siemens or customers

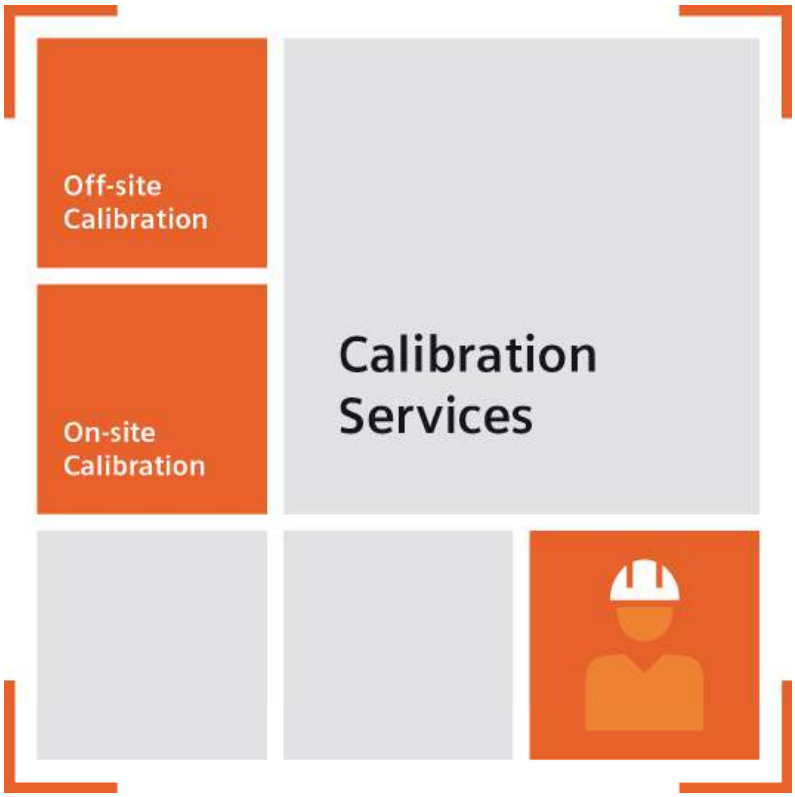
**PCS 7 process visualization and monitoring**

Process-level access to information and operation of the plant and asset management, including contactless identification of the assets (RFID scanner), even in hazardous areas

**Data recording**

Measuring point recording during service call or digitalization of the plant by means of app-driven manual data recording with SASDCmobile

**Calibration services**



Paperless solution for execution and documentation of calibration for process instrumentation with bMobile app and CMX cloud-based calibration management

© Siemens 2024

# Ensuring the highest level of **precision and process quality**

Calibration of the measuring and inspection equipment used is vital for precision, quality assurance and compliance in production, maintenance and service. Calibrating measuring and inspection equipment, like any precision engineering activity, requires proper expertise: This is the only way to ensure that equipment performs to long-term expectations and can be trusted for the job at hand.

**Off-site Calibration**
Make sure your measuring equipment meets industry standards and remains operational throughout its lifecycle. Regular certification of the accuracy of your measuring instruments provides peace of mind.
Our DIN EN ISO/IEC 17025:2018-accredited lab is fully equipped with state-of-the-art precision instrumentation providing a broad range of calibrations for dimensional, electronic and process equipment.

**On-site Calibration**
Maintaining and calibrating measuring equipment in time is an important matter during the operational phase of a plant's lifecycle. In selected regions, we can also provide our calibration services directly at your facility to ensure your processes do not suffer from extended downtime.

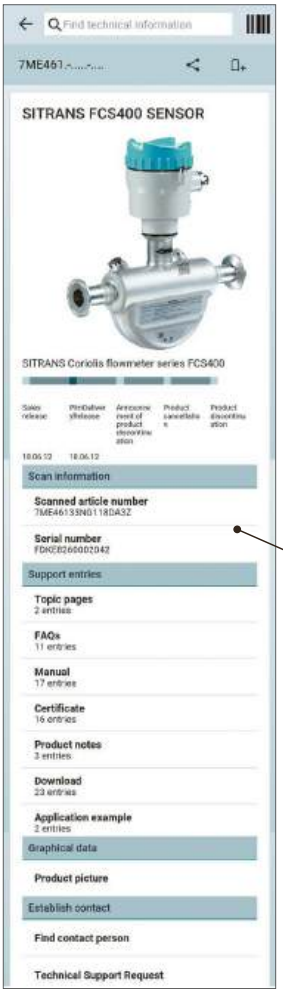
| | Pressure | Temperature | Flow | Dynamic Weighing |
|---|---|---|---|---|
| Off-site Calibration according to ISO 9001 | x | x | x | |
| Off-site Calibration according to ISO 17025 | x | x | x | |
| Off-site Domestic Custody Transfer Verification | | | x | |
| On-site Calibration according to ISO 9001* | | | | x |

* On-site services will be performed by local Siemens Customer Services. Please contact the Siemens office in your region for further information.

© Siemens 2024

# Our global **support database**

Access to accurate information is a huge asset in the field. Siemens Industry Online Support (SIOS) provides up-to-date information about specific products quickly and easily. Available in the online portal or in the downloadable smartphone app for maximum convenience.



**SIOS Portal**

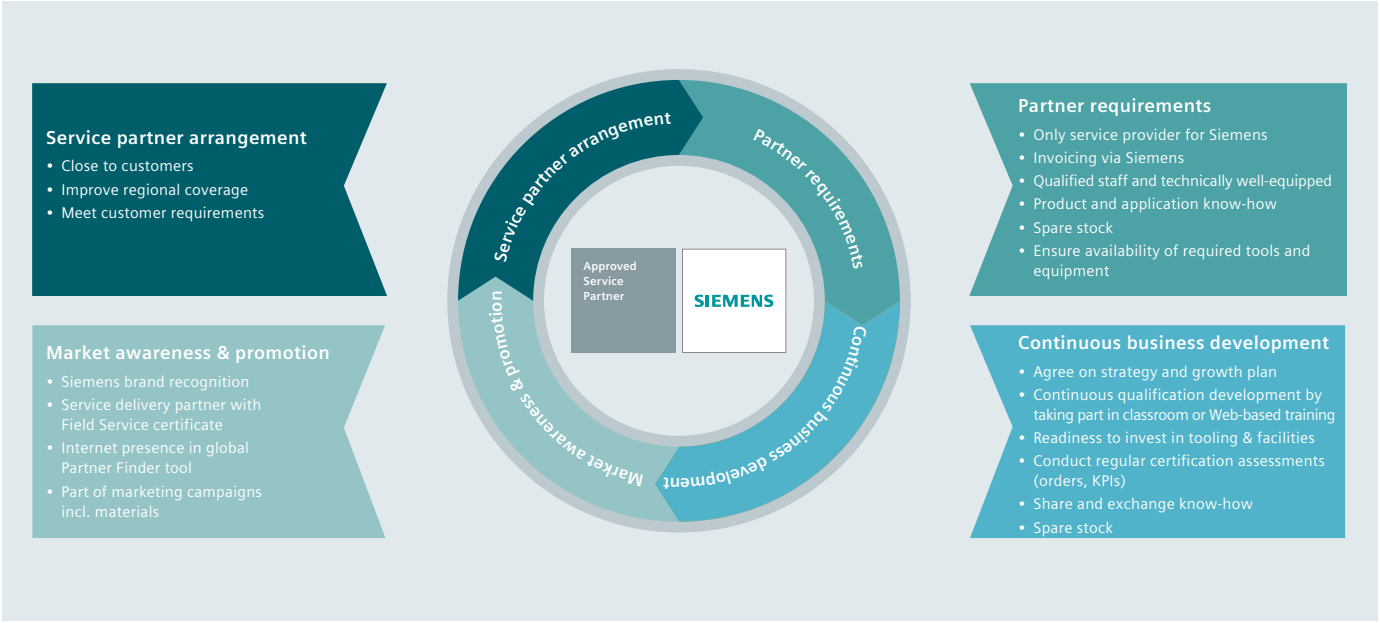
24 hours a day, 365 days a year – this portal provides comprehensive information on the entire Siemens portfolio for process and discrete industries.

Find information on automation, communication and process instrumentation under:

- Product support: handbooks, manuals, FAQs, product notes, certificates
- Services: the service portfolio
- Support request: help – just state your issue and we will contact you within four working hours
- My support: activate notifications according to your needs

**Industry Support App**

- Download and install the app on your smartphone
- Scan the QR code of any device in the field
- Access comprehensive information including device-specific information like handbooks, manuals, FAQs, product notes
- Submit a support request and we will contact you within four working hours (even quicker with a premium service contact)



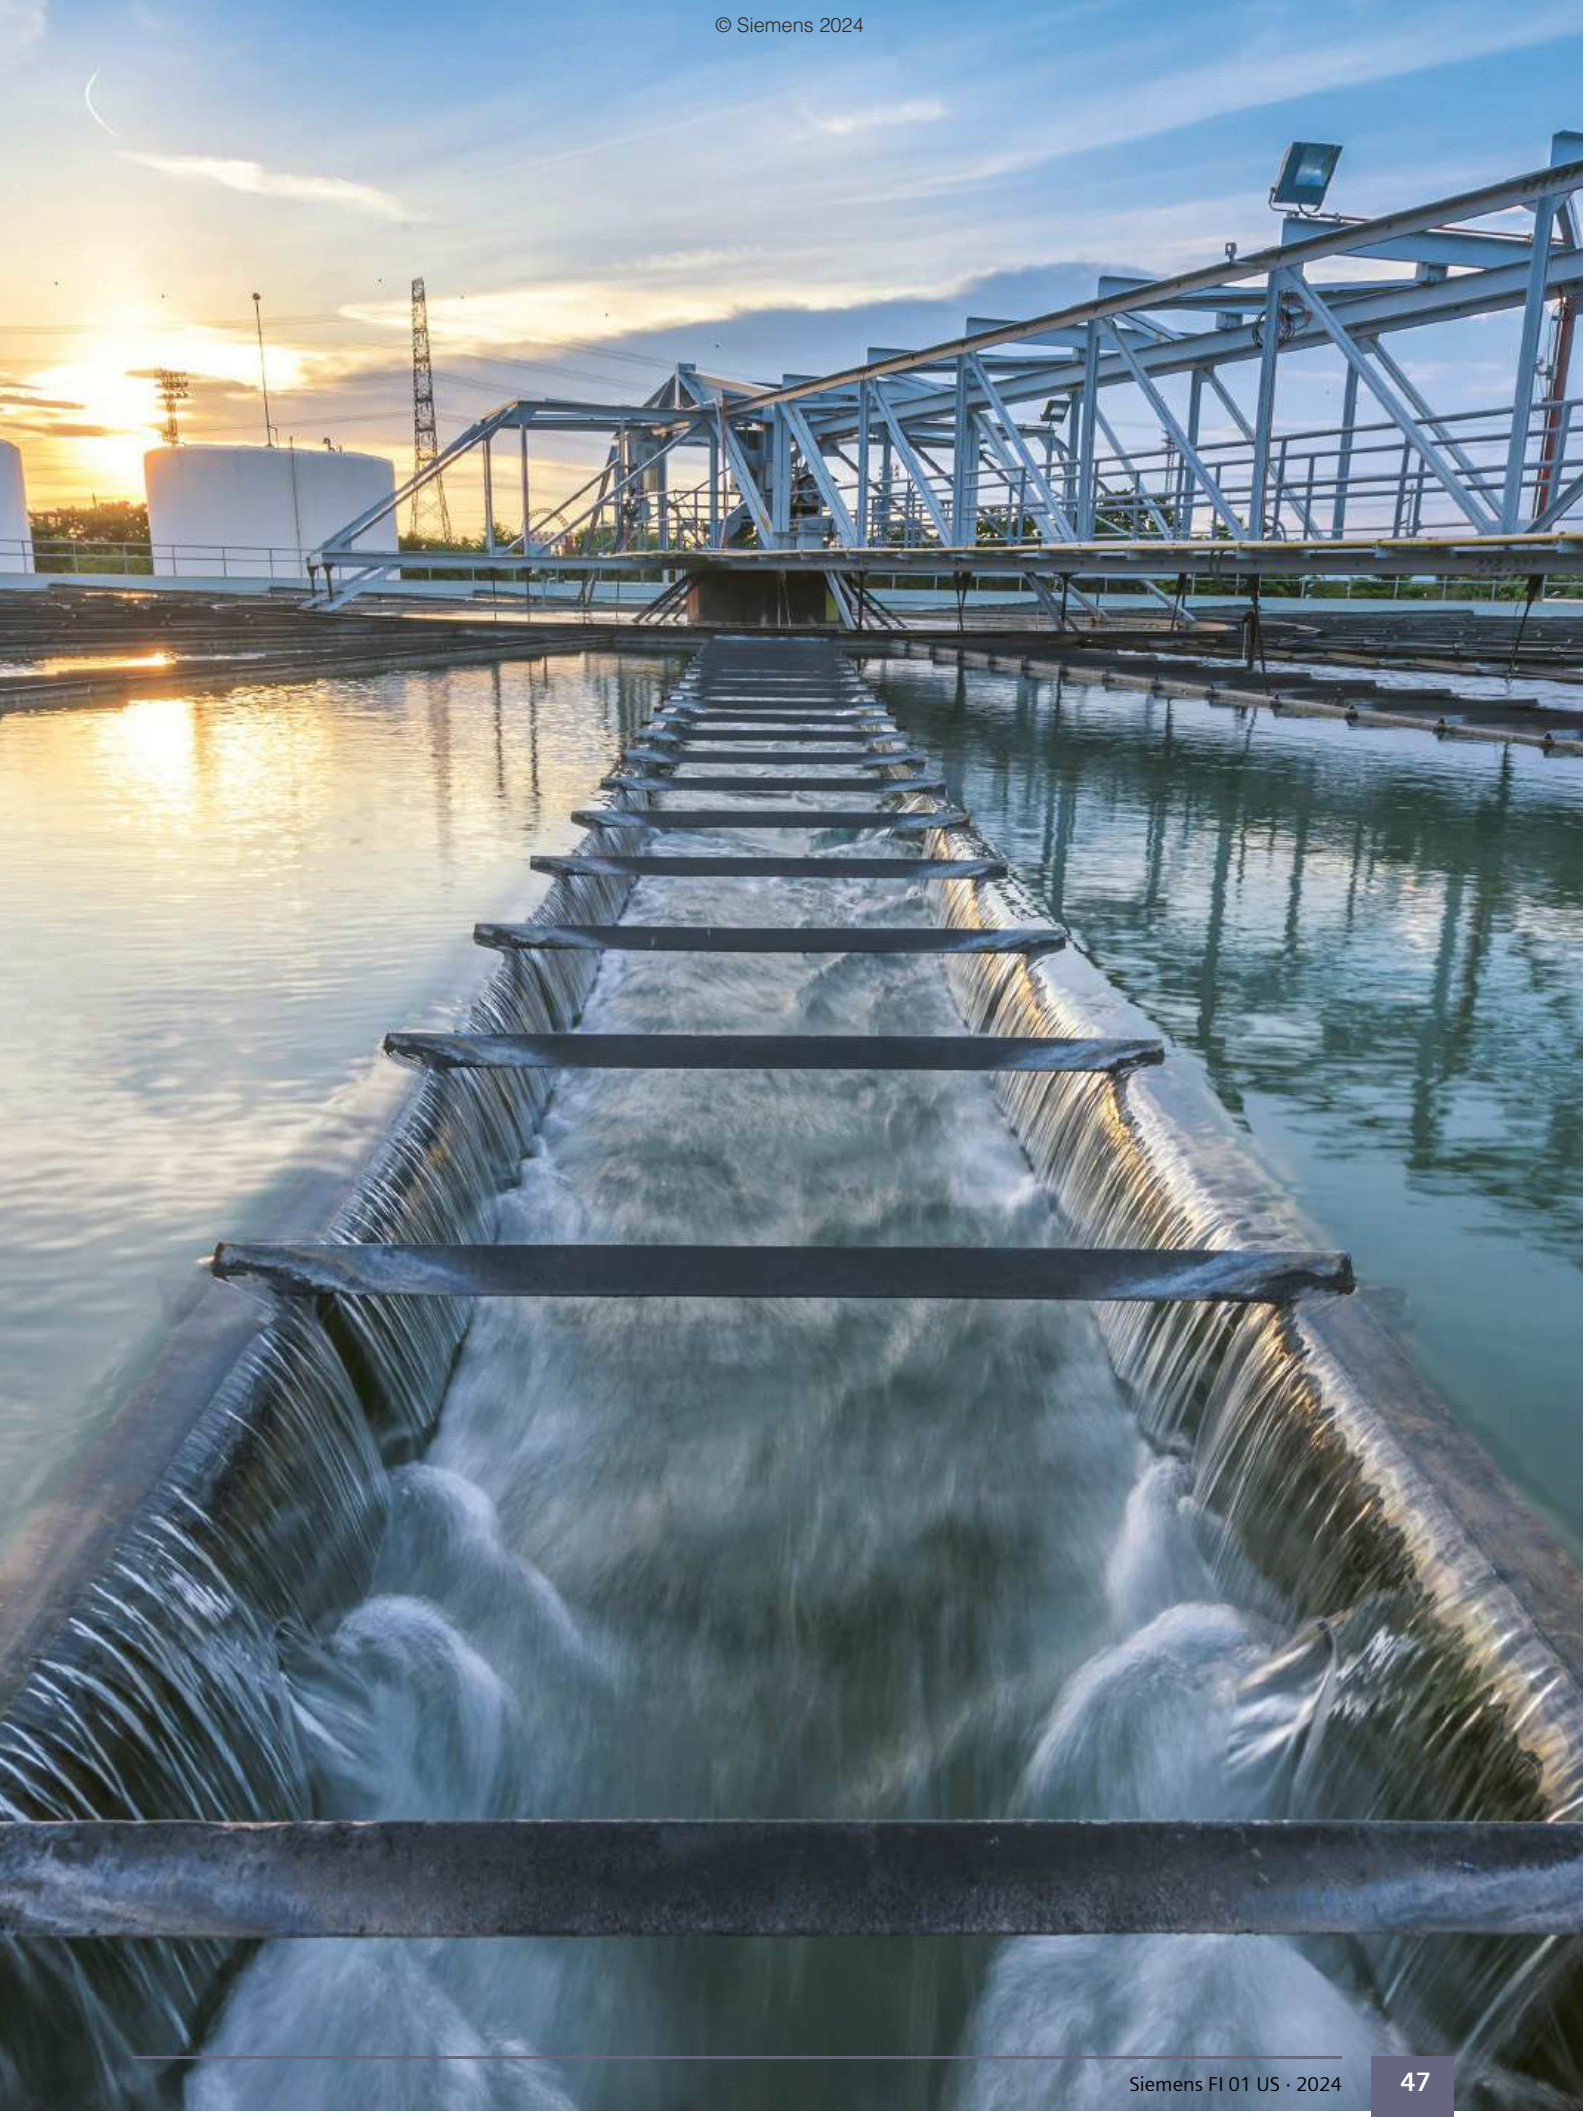
© Siemens 2024

# Approved and certified – near you

Siemens partners stand for proven expertise and excellent customer support. The companies we accept as partners have proven their capabilities and been certified in accordance with rigorous standards. At the same time, we support our partners with the same criteria we apply to the training of our own employees.

**Role of partners**

- Act as a competent service provider on behalf of Siemens
- Regional on-site support
- Bring expertise and service capability
- Secure ongoing development of new service offers together with Siemens
- Win new service customers



**Siemens delivers quality**

- Based on shared interest (Siemens and partner)
- Partners attend Siemens training programs on a regular basis
- Build on existing long-term relationships between Siemens and partners
- An extensive and standardized process for selection, onboarding and management of partners provides globally uniform quality and standards

**Your benefits**

- Competent service delivery
- Close to customers (short reaction time)
- Fast access to critical spares (partner stock)
- Increased flexibility
- Partners typically enjoy a high degree of regional acceptance

***Supplied product documentation on DVD and safety notes***

The scope of delivery of the Siemens products for process instrumentation includes a multilingual instruction sheet with **safety notes** as well as a uniform **mini DVD – Process Instrumentation and Weighing Systems**.

This DVD contains the most important manuals and certificates for the Siemens process instrumentation and weighing technology portfolio. The delivery may also contain product-specific or order-specific printed materials.

For more information, refer to section 10 "Appendix".

## Overview

The SITRANS P200 pressure transmitter measures the gauge and absolute pressure of liquids, gases and vapors.

- With ceramic measuring cell
- Gauge and absolute measuring ranges 1 to 60 bar (15 to 1000 psi)
- For general applications

## Benefits

- High measurement accuracy
- Rugged stainless steel enclosure
- High overload withstand capability
- For corrosive and non-corrosive media
- For measuring the pressure of liquids, gases and vapors
- Compact design

## Application

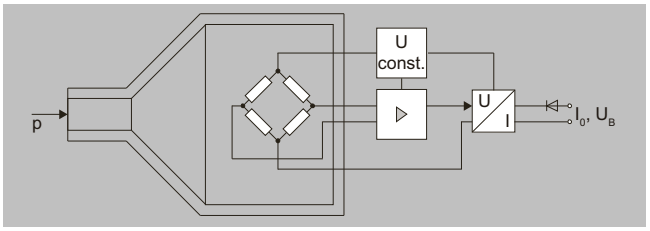
The SITRANS P200 pressure transmitter for gauge and absolute pressure is used in the following industrial areas:

- Mechanical engineering
- Shipbuilding
- Power engineering
- Chemical industry
- Water supply

## Design

***Device structure without explosion protection***

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm, installed in a stainless steel enclosure. It can be connected electrically with a device plug to EN 175301-803-A (IP65), an M12 device plug (IP67), a cable (IP67) or a Quickon cable quick screw connection (IP67). The output signal is between 4 and 20 mA or 0 and 10 V



***Device structure with explosion protection***

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm, installed in a stainless steel enclosure. It can be connected electrically with a device plug fulfilling EN 175301-803-A (IP65) or an M12 device plug (IP67). The output signal is between 4 and 20 mA.

## Function

The pressure transmitter measures the gauge and absolute pressure of liquids, gases and vapors.

***Mode of operation***

SITRANS P200 pressure transmitters (7MF1565-...), functional diagram

The ceramic measuring cell has a thick-film resistance bridge, to which the operating pressure p is transmitted through a ceramic diaphragm.

The voltage output from the measuring cell is converted by an amplifier into an output current of 4 to 20 mA or an output voltage of 0 to 10 V DC.

The output current and voltage are linearly proportional to the input pressure.

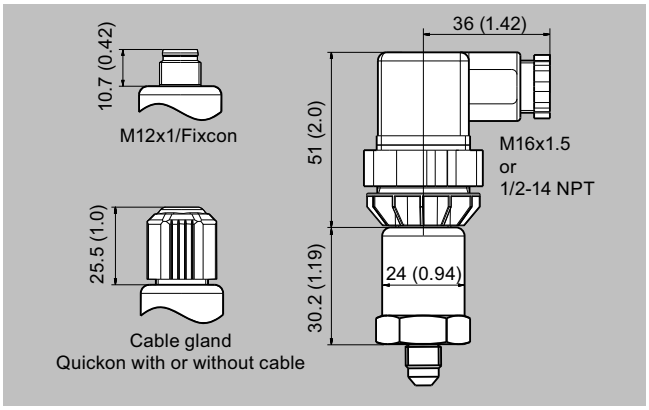
## Technical specifications

| SITRANS P200 for gauge and absolute pressure | |
|---|---|
| **Area of application** | |
| Gauge and absolute pressure measurement | Liquids, gases and vapors |
| **Mode of operation** | |
| Measuring principle | Piezo-resistive measuring cell (ceramic diaphragm) |
| Measured variable | Gauge and absolute pressure |
| **Input** | |
| Measuring range | |
| • Gauge pressure | |
| - Metric | 1 ... 60 bar (15 ... 870 psi) |
| - US measuring range | 15 ... 1000 psi |
| • Absolute pressure | |
| - Metric | 0.6 ... 16 bar a (10 ... 232 psi a) |
| - US measuring range | 10 ... 300 psi a |
| **Output** | |
| Current signal | 4 ... 20 mA |
| • Load | ($U_B$ - 10 V)/0.02 A |
| • Auxiliary power $U_B$ | 7 ... 33 V DC (10 ... 30 V for Ex) |
| Voltage signal | 0 ... 10 V DC |
| • Load | ≥ 10 kΩ |
| • Auxiliary power $U_B$ | 12 ... 33 V DC |
| • Current consumption | < 7 mA at 10 kΩ |
| Radiometric output | 10 ... 90% |
| • Load | ≥ 10 kΩ |
| • Auxiliary power $U_B$ | DC 5 V ± 10% |
| • Current consumption | < 7 mA at 10 Ω |
| Characteristic curve | Linear rising |
| **Measuring accuracy** | |
| Measurement deviation at limit setting including hysteresis and reproducibility | • Typical: 0.25% of measuring span<br>• Maximum: 0.5% of measuring span |
| Step response time $T_{99}$ | < 5 ms |
| Long-term stability | |
| • Lower range value and measuring span | 0.25% of measuring span/year |
| Effect of ambient temperature | |
| • Lower range value and measuring span | 0.25%/10 K of measuring span |
| • Influence of power supply | 0.005%/V |
| **Operating conditions** | |
| Process temperature with gasket made of: | |
| • FPM (standard) | -15 ... +125 °C (5 ... 257 °F) |
| • Neoprene | -35 ... +100 °C (-31 ... +212 °F) |
| • Perbunan | -20 ... +100 °C (-4 ... +212 °F) |
| • EPDM | -40 ... +125 °C (-40 ... +257 °F), usable for drinking water |
| Ambient temperature | -25 ... +85 °C (-13 ... +185 °F) |
| Storage temperature | -50 ... +100 °C (-58 ... +212 °F) |
| Degree of protection according to IEC 60529 | • IP65 with plug according to EN 175301-803-A<br>• IP67 with M12 device plug<br>• IP67 with cable<br>• IP67 with cable quick screw connection |
| Electromagnetic compatibility | • According to IEC 61326-1/-2/-3<br>• According to NAMUR NE21 for ATEX devices only, and with a max. measurement error of ≤ 1% |
| **Structural design** | |
| Weight | Approx. 0.090 kg (0.198 lbs) |
| Process connections | See dimension drawings |

## Technical specifications (continued)



| SITRANS P200 for gauge and absolute pressure | |
|---|---|
| Electrical connections | • Plug according to EN 175301-803-A Form A with cable entry M16x1.5 or ½-14 NPT or Pg 11<br>• Device plug M12<br>• 2 or 3-wire (0.5 mm²) cable (Ø ± 5.4 mm)<br>• Quickon cable quick screw connection |
| Material of wetted parts | |
| • Measuring cell | $Al_2O_3$ - 96% |
| • Process connection | Stainless steel, mat. no. 1.4404 (SST 316 L) |
| • Gasket | • FPM (standard)<br>• Neoprene<br>• Perbunan<br>• EPDM |
| Material of non-wetted parts | |
| • Enclosure | Stainless steel, mat. no. 1.4404 (SST 316 L) |
| • Connector housing | Plastic |
| • Cable | PVC |
| **Certificates and approvals** | |
| Classification according to pressure equipment directive (PED 2014/68/EU) | For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice) |

## Overview

The SITRANS P210 pressure transmitter measures the gauge pressure of liquids, gases and vapors.

- Stainless steel measuring cell
- Measuring ranges 100 to 600 mbar (1.45 to 8.7 psi) relative
- For low-pressure applications

## Benefits

- High measurement accuracy
- Rugged stainless steel enclosure
- High overload withstand capability
- For corrosive and non-corrosive media
- For measuring the pressure of liquids, gases and vapors
- Compact design

## Application

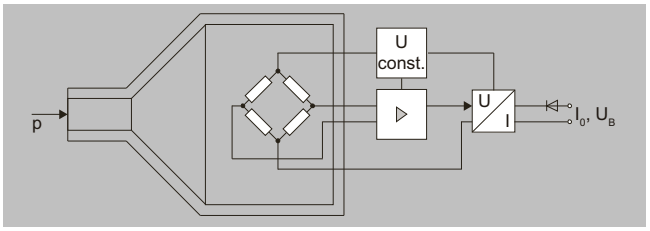
The SITRANS P210 pressure transmitter for gauge pressure is used in the following industrial areas:

- Mechanical engineering
- Shipbuilding
- Energy development
- Chemical industry
- Water supply

## Design

***Device structure without explosion protection***

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm, installed in a stainless steel enclosure. It can be connected electrically with a device plug to EN 175301-803-A (IP65), an M12 device plug (IP67), a cable (IP67) or a Quickon cable quick screw connection (IP67). The output signal is between 4 and 20 mA or 0 and 10 V



***Device structure with explosion protection***

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm, installed in a stainless steel enclosure. It can be connected electrically with a device plug fulfilling EN 175301-803-A (IP65) or an M12 device plug (IP67). The output signal is between 4 and 20 mA.

## Function

The pressure transmitter measures the gauge pressure of liquids and gases as well as the level of liquids.

***Mode of operation***

SITRANS P210 pressure transmitter (7MF1566-...), functional diagram

The stainless steel measuring cell with silicone oil filling has a thin-film resistance bridge to which the operating pressure p is transmitted through a stainless steel diaphragm.

The voltage output from the measuring cell is converted by an amplifier into an output current of 4 to 20 mA or an output voltage of 0 to 10 V DC.

The output current and voltage are linearly proportional to the input pressure.

|---|---|
| **Area of application** | |
| Gauge pressure measurement | Liquids, gases and vapors |
| **Mode of operation** | |
| Measuring principle | Piezoresistive measuring cell (stainless steel diaphragm) |
| Measured variable | Gauge pressure |
| **Input** | |
| Measuring range | |
| • Gauge pressure | 100 ... 600 mbar (1.45 ... 8.7 psi) |
| **Output** | |
| Current signal | 4 ... 20 mA |
| • Load | ($U_B$ - 10 V)/0.02 A |
| • Auxiliary power $U_B$ | 7 ... 33 V DC (10 ... 30 V for Ex) |
| Voltage signal | 0 ... 10 V DC |
| • Load | ≥ 10 kΩ |
| • Auxiliary power $U_B$ | 12 ... 33 V DC |
| • Current consumption | < 7 mA at 10 kΩ |
| Radiometric output | 10 ... 90% |
| • Load | ≥ 10 kΩ |
| • Auxiliary power $U_B$ | DC 5 V ± 10% |
| • Current consumption | < 7 mA at 10 kΩ |
| Characteristic curve | Linear rising |
| **Measuring accuracy** | |
| Measurement deviation at limit setting including hysteresis and reproducibility | • Typical: 0.25% of measuring span<br>• Maximum: 0.5% of measuring span |
| Step response time $T_{99}$ | < 5 ms |
| Long-term stability | |
| • Lower range value and measuring span | 0.25% of measuring span/year |
| Effect of ambient temperature | |
| • Lower range value and measuring span | • 0.25%/10 K of measuring span<br>• 0.5%/10 K of measuring span for a measuring range 100 ... 400 mbar (40 ... 240 in$H_2O$) |
| • Influence of power supply | 0.005%/V |
| **Operating conditions** | |
| Process temperature with gasket made of: | |
| • FPM (standard) | -15 ... +125 °C (5 ... 257 °F) |
| • Neoprene | -35 ... +100 °C (-31 ... +212 °F) |
| • Perbunan | -20 ... +100 °C (-4 ... +212 °F) |
| • EPDM | -40 ... +125 °C (-40 ... +257 °F), usable for drinking water |
| Ambient temperature | -25 ... +85 °C (-13 ... +185 °F) |
| Storage temperature | -50 ... +100 °C (-58 ... +212 °F) |
| Type of protection according to IEC 60529 | • IP65 with plug according to EN 175301-803-A<br>• IP67 with M12 device plug<br>• IP67 with cable<br>• IP67 with cable quick screw connection |
| Electromagnetic compatibility | • According to IEC 61326-1/-2/-3<br>• According to NAMUR NE21 for ATEX devices only, and with a max. measurement error of ≤ 1% |
| Mounting position | Vertical, facing up |
| **Structural design** | |
| Weight | Approx. 0.090 kg (0.198 lbs) |
| Process connections | See dimension drawings |

## Overview

The SITRANS P220 pressure transmitter measures the gauge pressure of liquids, gases and vapors.

- Stainless steel measuring cell, fully welded
- Measuring ranges 2.5 to 1 000 bar (36.3 to 14 500 psi) relative
- For high-pressure applications and refrigeration technology

## Benefits

- High measurement accuracy
- Rugged stainless steel enclosure
- High overload withstand capability
- For corrosive and non-corrosive media
- For measuring the pressure of liquids, gases and vapors
- Compact design
- Gasket-less

## Application

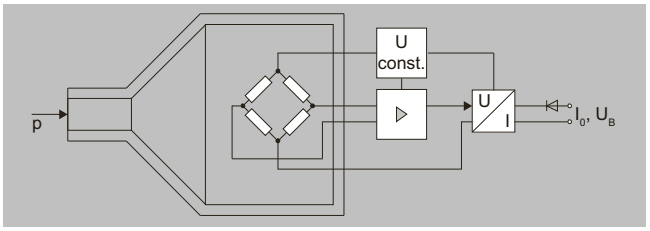
The SITRANS P220 pressure transmitter for gauge pressure is used in the following industrial areas:

- Mechanical engineering
- Shipbuilding
- Energy development
- Chemical industry
- Water supply

## Design

***Device structure without explosion protection***

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm, installed in a stainless steel enclosure. It can be connected electrically with a device plug to EN 175301-803-A (IP65), an M12 device plug (IP67), a cable (IP67) or a Quickon cable quick screw connection (IP67). The output signal is between 4 and 20 mA or 0 and 10 V



***Device structure with explosion protection***

The pressure transmitter consists of a piezoresistive measuring cell with a diaphragm, installed in a stainless steel enclosure. It can be connected electrically with a device plug fulfilling EN 175301-803-A (IP65) or an M12 device plug (IP67). The output signal is between 4 and 20 mA.

## Function

The pressure transmitter measures the gauge pressure of liquids and gases as well as the level of liquids.

***Mode of operation***

SITRANS P220 pressure transmitters (7MF1567-...), functional diagram

The stainless steel measuring cell has a thick-film resistance bridge to which the operating pressure p is transmitted through a stainless steel diaphragm.

The voltage output from the measuring cell is converted by an amplifier into an output current of 4 to 20 mA or an output voltage of 0 to 10 V DC.

The output current and voltage are linearly proportional to the input pressure.

## Overview

The pressure transmitter SITRANS LH100 is a submersible sensor for hydrostatic level measurement.

The pressure transmitter measures the liquid levels in tanks, containers, channels and dams. The SITRANS LH100 pressure transmitters are available for various measuring ranges and with explosion protection as an option.

A cable box and an anchoring clamp are available as accessories for simple installation.

## Benefits

- Compact design
- Simple installation
- Small error in measurement (0.3 %)
- Degree of protection IP68

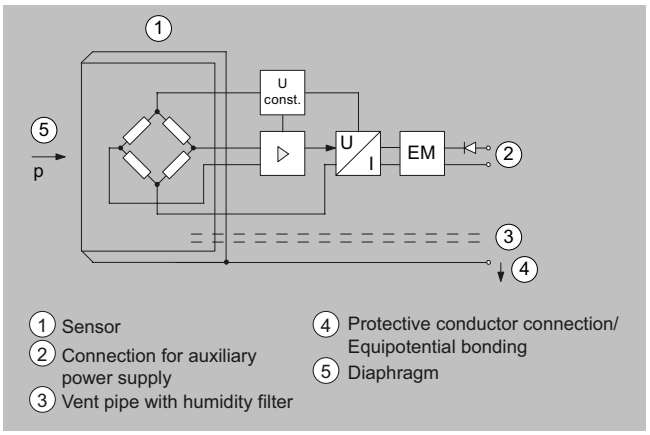
## Application

SITRANS LH100 pressure transmitters are used in the following branches, for example:

- Shipbuilding
- Water/waste water supply
- For use in unpressurized/open vessels and wells

## Design

The pressure transmitter has a built-in ceramic sensor which is equipped with a Wheatstone resistance bridge.



These pressure transmitters are equipped with an electronic circuit fitted together with the sensor in a stainless steel enclosure. In addition, the connecting cable contains a vent pipe which is equipped with a humidity filter to prevent the build-up of condensation.

The diaphragm is protected against external influences by a protective cap.

The sensor, the electronics and the connecting cable are housed in an enclosure with small dimensions.

The pressure transmitter is temperature-compensated for a wide temperature range.

## Function

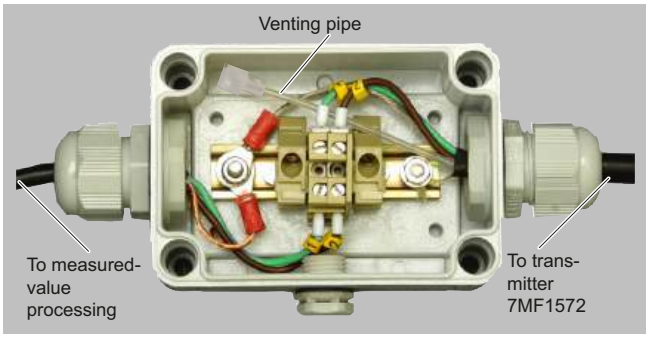
SITRANS LH100 pressure transmitter, mode of operation and connection diagram

On one side of the sensor (1), the diaphragm (5) is exposed to the hydrostatic pressure which is proportional to the submersion depth. This pressure is compared with atmospheric pressure. Pressure compensation is carried out using the vent pipe (3) in the connecting cable. The vent pipe is equipped with a humidity filter which prevents the build-up of condensation in the vent pipe.

The hydrostatic pressure of the liquid column acts on the diaphragm of the sensor and transmits the pressure to the Wheatstone resistance bridge in the sensor.

The output voltage signal of the sensor is applied to the electronic circuit where it is converted into an output current signal of 4 to 20 mA.

The protective conductor connection/equipotential bonding (4) is connected to the enclosure.



© Siemens AG 2024

## Integration

It is generally recommended that the connecting cable of the SITRANS LH100 transmitter is connected to the cable box, which can be ordered separately, and secured with the anchoring clamp, also available separately. The cable box has to be installed near the measuring point.

If the medium is anything other than water, it is also necessary to check compatibility with the specified materials of the transmitter.

Cable box 7MF1572-8AA, open, schematic diagram

## More information

***Establishing the measuring range with water as process medium***

Calculation of the measuring range

***p = ρ x g x H***

with:

ρ = density of medium
g = local gravitational acceleration
H = maximum level

Example:

Medium: Water, ρ = 1 000 kg/m$^3$
Gravitational acceleration: 9.81 m/s$^2$
Lower range value: 0 m
Maximum level: 6.0 m
Cable length: 10 m

Calculation:

p = 1 000 kg/m$^3$ x 9.81 m/s$^2$ x 6.0 m
p = 58 860 N/m$^2$
p = 589 mbar

Transmitter to be ordered:

***7MF1572-1FA10***

Plus, if required, cable box 7MF1572-8AA and anchoring clamp 7MF1572-8AB

## Overview

The pressure transmitter SITRANS LH300 is a submersible sensor for hydrostatic level measurement with a protective capability made of PPE (left), stainless steel (center) and ETFE (right).

The pressure transmitter measures the liquid levels in tanks, containers, channels and dams. The SITRANS LH300 pressure transmitters are available for various measuring ranges and with explosion protection as an option.

A cable box and an anchoring clamp are available as accessories for simple installation.

## Benefits

- Compact design
- Simple installation
- Small error in measurement (typically 0.15%)
- Degree of protection IP68

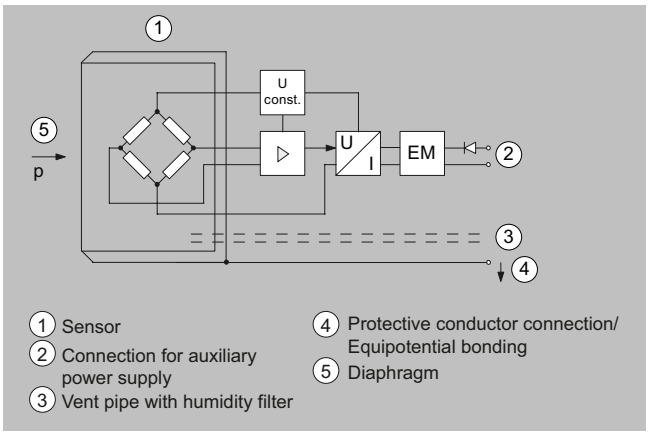
## Application

SITRANS LH300 pressure transmitters are used in the following fields of industry, for example:

- Shipbuilding
- Water/waste water supply
- Drinking water treatment plants
- For use in unpressurized/open vessels and wells
- Desalinization plants

## Design

The pressure transmitter has a built-in ceramic sensor which is equipped with a Wheatstone resistance bridge.



These pressure transmitters are equipped with an electronic circuit fitted together with the sensor in a stainless steel enclosure. In addition, the connecting cable contains a vent pipe which is equipped with a humidity filter to prevent the build-up of condensation.

The diaphragm is protected against external influences by a protective cap.

The sensor, the electronics and the connecting cable are housed in an enclosure with small dimensions.

The pressure transmitter is temperature-compensated for a wide temperature range.

## Function

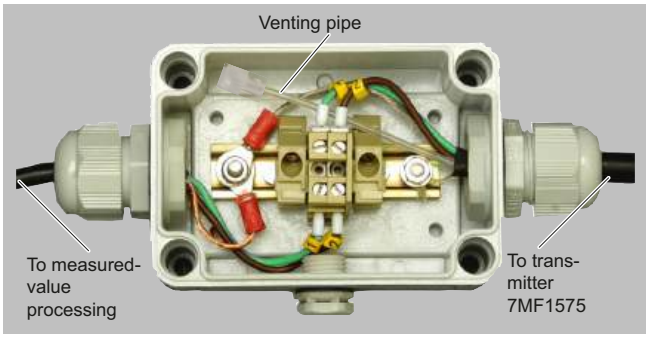
SITRANS LH300 pressure transmitter, mode of operation and connection diagram

On one side of the sensor (1), the diaphragm (5) is exposed to the hydrostatic pressure which is proportional to the submersion depth. This pressure is compared with atmospheric pressure. Pressure compensation is carried out using the vent pipe (3) in the connecting cable. The vent pipe is equipped with a humidity filter which prevents the build-up of condensation in the vent pipe.

The hydrostatic pressure of the liquid column acts on the diaphragm of the sensor and transmits the pressure to the Wheatstone resistance bridge in the sensor.

The output voltage signal of the sensor is applied to the electronic circuit where it is converted into an output current signal of 4 to 20 mA.

The protective conductor connection/equipotential bonding (4) is connected to the enclosure.



© Siemens AG 2024

## Integration

It is generally recommended that the connecting cable of the SITRANS LH300 transmitter is connected to the cable box, which can be ordered separately, and secured with an anchoring clamp, also available separately. The cable box is to be installed near the measuring point, but outside the process medium.

Likewise, in the case of process media other than water, the compatibility with the specified materials of the transmitter, cable and seal must be checked.

## More information

***Determination of the measuring range for water as process medium***

Calculation of the measuring range:

***p = ρ x g x H***

with:

ρ = density of medium
g = local gravitational acceleration
H = maximum level

Example:

Medium: Water, ρ = 1 000 kg/m$^3$
Gravitational acceleration: 9.81 m/s$^2$
Lower range value: 0 m
Maximum level: 6.0 m
Cable length: 10 m

Calculation:

p = 1 000 kg/m$^3$ x 9.81 m/s$^2$ x 6.0 m
p = 58 860 N/m$^2$
p = 589 mbar

Transmitter to be ordered:

***7MF1575-1FA10***

Plus, if required, cable box 7MF1575-8AA and anchoring clamp 7MF1575-8AB

## Overview

The SITRANS P Compact pressure transmitter is designed for the specific requirements of the food, pharmaceuticals and biotechnology industries.

The use of high-quality materials guarantees adherence to hygiene provisions.

Particular importance was placed on high surface quality. In addition, the system can be electropolished.

A further important feature is the hygienic design of the process connection with different aseptic connections.

The fully welded stainless steel enclosure can be designed with degree of protection up to IP67.

By means of corresponding temperature decouplers, the SITRANS P Compact transmitter can be used for temperatures up to 200 °C (392 °F).

## Benefits

- Measuring ranges from 0 to 160 mbar (0 to 2.32 psi) to 0 to 40 bar (0 to 580 psi)
- Linearity error incl. hysteresis < +0.2% of the full-scale value
- Piezo-resistive measurement system, vacuum-proof and overload-proof
- Hygiene-based design according to EHEDG, FDA and GMP recommendations
- Material and surface quality according to hygiene requirements
- Wetted parts made of stainless steel; completely welded
- Signal output 4 to 20 mA (0 to 20 mA as option)
- Stainless steel enclosure with degree of protection IP65 (IP67 as option)
- Process temperature up to 200 °C (392 °F)
- Explosion protection II 2G EEx [ib] IIC T6 to ATEX
- Easy and safe to clean

## Application

The SITRANS P Compact pressure transmitter is designed for the specific requirements of the food, pharmaceuticals and biotechnology industries.

The use of high-quality materials guarantees adherence to hygiene provisions.

The SITRANS P Compact pressure transmitter can be ordered in a large number of different variants. This enables precise adaptation of the pressure transmitter to the conditions of the usage location.

## Design

The electronics are potted for protection against humidity, corrosive atmospheres and vibrations.

***Operating instructions for the pressure transmitter***

Atmospheric internal pressure compensation

The atmospheric internal pressure compensation of the SITRANS P Compact pressure transmitter is designed as follows in the overpressure measuring range:

- With connector designs via plug cable gland (IP65)
- In field enclosures via an integrated sinter filter (IP65) or a ventilated connecting cable (IP67)
- In versions with cable outlet via ventilated connecting cable (IP67)

In the absolute pressure area, no internal pressure compensation to the atmosphere is necessary.

**Note**: The degrees of protection specified above are only achieved under the following conditions:

- Proper mounting of the pressure transmitter
- Firmly tightened plug cable glands
- Cable diameters match nominal diameters of sealing inserts in the enclosure

**Note**: The integrated measures for EMC are only effective with a properly connected ground connection.

CE marking

The CE marking of the pressure transmitter certifies adherence with the guidelines of the European Council (9/336/EEC), the EMC legislation (13 Nov. 1992) and the applicable generic standards.

Problem-free operation in systems and plants is only achieved when the conditions for shielding, grounding, cable routing and electrical isolation are complied with during installation and mounting.

Hazardous areas

**Note**: In hazardous areas, electrical equipment can only be installed and operated by qualified expert personnel.

Changes at devices and connections void the Ex protection and the warranty.

In intrinsically safe circuits, equipotential bonding must be ensured over the entire course of the cable run, within and outside of the hazardous area. The limit values listed in the ATEX approval need to be considered.

## Function

Process pressure acts on a piezo-resistive semi-conductor measuring bridge via a remote seal diaphragm by means of a transfer fluid. The pressure transmitter converts the measured pressure values into a load-independent current signal.

A compensation network achieves a large degree of independence of the output signal from the ambient temperature. With a specially adapted remote seal connection with minimized system volume, the influence of the process temperature on the output signal is reduced significantly as compared to a conventional screw connection.

The pressure transmitters can be supplied with an unregulated DC voltage of 10 to 30 V. The output signals common in measuring technology are available.

## Technical specifications

| Pressure transmitters for food, pharmaceuticals and biotechnology | |
|---|---|
| **Mode of operation** | |
| Measuring principle | Piezo-resistive |
| **Input** | |
| Measured variable | Gauge or absolute pressure |
| Measuring range | 0 ... 160 mbar (0 ... 2.32 psi)<br>...<br>0 ... 40 bar (0 ... 580 psi) |
| **Output** | |
| Output signal | |
| • 2-wire system | 4 ... 20 mA |
| • 3-wire system | 0 ... 20 mA |
| **Measuring accuracy** | According to IEC 62828-1 |
| Measurement deviation at limit setting including hysteresis and reproducibility | ≤ 0.2% of full-scale value |
| Adjustment accuracy | ≤ ±0.2% of full-scale value |
| Step response time | < 20 ms |
| ***Effect of ambient temperature*** | |
| On the enclosure | |
| • Zero point | < 0.2%/10 K of full-scale value |
| • Measuring span | < 0.2%/10 K of full-scale value |
| On the process connection (remote seals) | Zero-point error (dependent on design)[1] |
| • Flange remote seal | |
| - DN 25/1" | 4.8 mbar/10 K (0.069 psi/10 K) |
| - DN 32/1¼" | 2.3 mbar/10 K (0.033 psi/10 K) |
| - DN 40/1½" | 1.6 mbar/10 K (0.023 psi/10 K) |
| - DN 50/2" | 0.6 mbar/10 K (0.009 psi/10 K) |
| • Inline seal | |
| - DN 25/1" | 9.5 mbar/10 K (0.138 psi/10 K) |
| - DN 32/1¼" | 4.1 mbar/10 K (0.060 psi/10 K) |
| - DN 40/1½" | 3.9 mbar/10 K (0.057 psi/10 K) |
| - DN 50/2" | 3.9 mbar/10 K (0.057 psi/10 K) |
| **Operating conditions** | |
| Installation conditions | |
| • Mounting position | Any, vertical as standard |
| Ambient conditions | |
| • Ambient temperature | -10 ... +70 °C (14 ... 158 °F) |
| • Storage temperature | -10 ... +90 °C (14 ... 194 °F) |
| • Process temperature | Max. 200 °C (392 °F), depending on design |
| • Vacuum-resistant | 0 mbar (0 psi) absolute at max. 50 °C. Higher process temperatures on request. |
| • Degree of protection according to IEC 60529 | IP65, optional IP67 |
| • Electromagnetic Compatibility | |
| - Emitted interference | To EN 50081 Part 1, issue 1993 (residential and industrial areas). The device has no own emissions. |
| - Noise immunity to | EN 50082 Part 2, issue March 1995 (industrial areas) |
| **Structural design** | |
| Weight (without remote seal) | |
| • Field enclosure | ≈ 460 G (≈ 1.01 lb) |

## Technical specifications (continued)

## Circuit diagrams

SITRANS P Compact, connection diagram

© Siemens AG 2024

## Overview

The SITRANS P300 is a digital pressure transmitter for relative and absolute pressure. The conventional thread versions are available as process connections, as are flush-mounted versions. A large number of the flush-mounted versions are suitable for food and pharmaceutical applications, and satisfy the EHEDG and 3A hygiene requirements.

The output signal is a load-independent direct current from 4 to 20 mA or a PROFIBUS PA or FOUNDATION Fieldbus signal, which is linearly proportional to the input pressure. Communication is via HART protocol or PROFIBUS PA or FOUNDATION Fieldbus interface. The basic settings of the pressure transmitter can be made easily on-site by means of three buttons.

The SITRANS P300 has a single-chamber stainless steel enclosure. The pressure transmitter is approved for "intrinsically safe" type of protection. It can be used in zone 1 or zone 0.

## Benefits

- High quality and service life
- High reliability even under extreme chemical and mechanical loads
- Extensive diagnostics and simulation functions
- Minimal conformity error
- Small long-term drift
- Wetted parts made of high-grade materials (e.g., stainless steel, Hastelloy)
- Measuring range 0.008 bar to 400 bar (0.1 psi to 5802 psi)
- High measuring accuracy
- Parameterization using control keys and HART and/or PROFIBUS PA or FOUNDATION Fieldbus

© Siemens AG 2024

## Application

The pressure transmitter is available in versions for gauge pressure and for absolute pressure. The output signal is always a load-independent direct current from 4 to 20 mA or a PROFIBUS PA or FOUNDATION Fieldbus signal, which is linearly proportional to the input pressure. The pressure transmitter measures corrosive, non-corrosive and hazardous gases, vapors and liquids.

It can be used for the following measurement types:

- Gauge pressure
- Absolute pressure

With appropriate parameter settings, it can also be used for the following additional measurement types:

- Level
- Volume
- Mass

The "intrinsically safe" Ex ia type of protection version of the transmitter can be installed in hazardous areas (Zone 1). The devices are provided with an EC type-examination certificate and comply with the respective harmonized European standards of ATEX.

***Gauge pressure***

This variant measures the gauge pressure of corrosive, non-corrosive and hazardous gases, vapors and liquids.

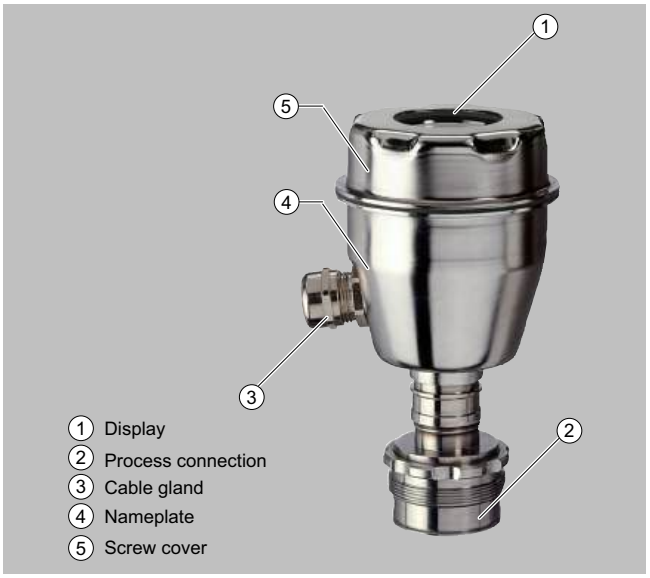
The smallest measuring span is 0.01 bar (0.15 psi), the largest 400 bar (5802 psi).

***Level***

With appropriate parameter settings, the gauge pressure variant measures the level of corrosive, non-corrosive and hazardous liquids.

For level measurement in an open vessel, you require one device; for level measurement in a closed vessel, you require two devices and a process control system.

***Absolute pressure***

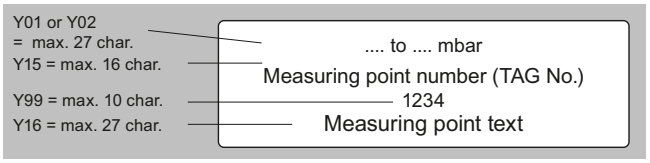


This variant measures the absolute pressure of corrosive, non-corrosive and hazardous gases, vapors and liquids.

The smallest measuring span is 0.008 bar a (0.12 psi a), the largest is 30 bar a (435 psi a).

## Design

The device comprises:



- electronics
- Enclosure
- Measuring cell

Perspective view of SITRANS P300

The enclosure has a screw-on cover (5) and, depending on the version, comes with or without an inspection window. The electrical terminal compartment, the buttons for operation of the device are located under this cover and, depending on the version, the display. The connections for the auxiliary power $U_H$ and the shield are in the terminal compartment. The cable gland is mounted on the side of the enclosure. The measuring cell with the process connection (2) is located on the bottom of the enclosure. The measuring cell with the process connection may differ from the one shown in the diagram, depending on the device version.

***Example of attached measuring points sign***

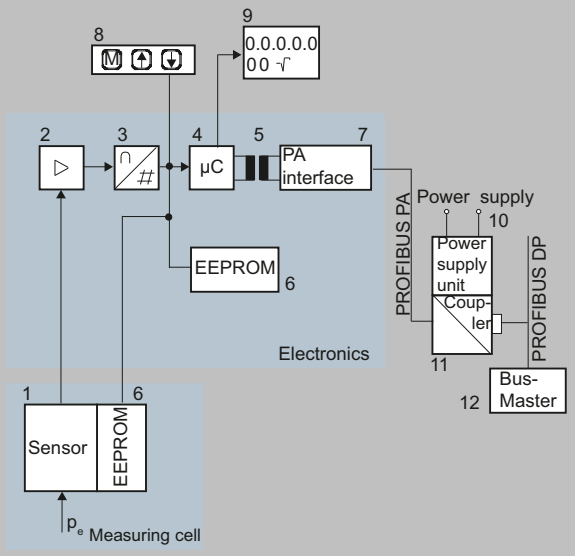
## Function

***Mode of operation of electronics with HART communication***

1 Measuring cell sensor
2 Instrument amplifier
3 Analog-to-digital converter
4 Microcontroller
5 Digital-to-analog converter
6 One non-volatile memory each in the measuring cell and electronics
7 HART interface
8 Three input keys (local operation)
9 Digital display
10 Diode circuit and connection for external ammeter
$I_A$ Output current 4 ... 20 mA
$U_H$ Power supply
$P_e$ Input variable

Function diagram of electronics

The input pressure is converted into an electrical signal by the sensor (1). This signal is amplified by the instrument amplifier (2) and digitalized in an analog-to-digital converter (3). The digital signal is analyzed in a microcontroller (4) and corrected for linearity and temperature response. In a digital-to-analog converter (5) it is then converted into the output current of 4 to 20 mA. A diode circuit provides reverse polarity protection. You can make an uninterrupted current measurement with a low-ohm ammeter at the connection (10). The data specific to the measuring cell, the electronic data and parameter settings are stored in two non-volatile memories (6). The first storage is linked to the measuring cell, the second to the electronics.



The buttons (8) can be used to call up individual functions, so-called modes. If you have a device with a local display (9), you can use this to track mode settings and other messages. The basic mode settings can be changed with a computer via the HART modem (7).

## Function (continued)

***Mode of operation of electronics with FOUNDATION Fieldbus communication***

| | | | |
|---|---|---|---|
| 1 | Measuring cell sensor | 8 | Three input keys (local operation) |
| 2 | Instrument amplifier | 9 | Digital display |
| 3 | Analog-to-digital converter | 10 | Power supply |
| 4 | Microcontroller | | |
| 5 | Electrical isolation | $p_e$ | Input variable |
| 6 | One non-volatile memory each in the measuring cell and electronics | | |
| 7 | FOUNDATION Fieldbus interface | | |

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the instrument amplifier (2) and digitalized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, corrected for linearity and temperature response and made available on the FOUNDATION Fieldbus via an electrically isolated FOUNDATION Fieldbus interface (7).

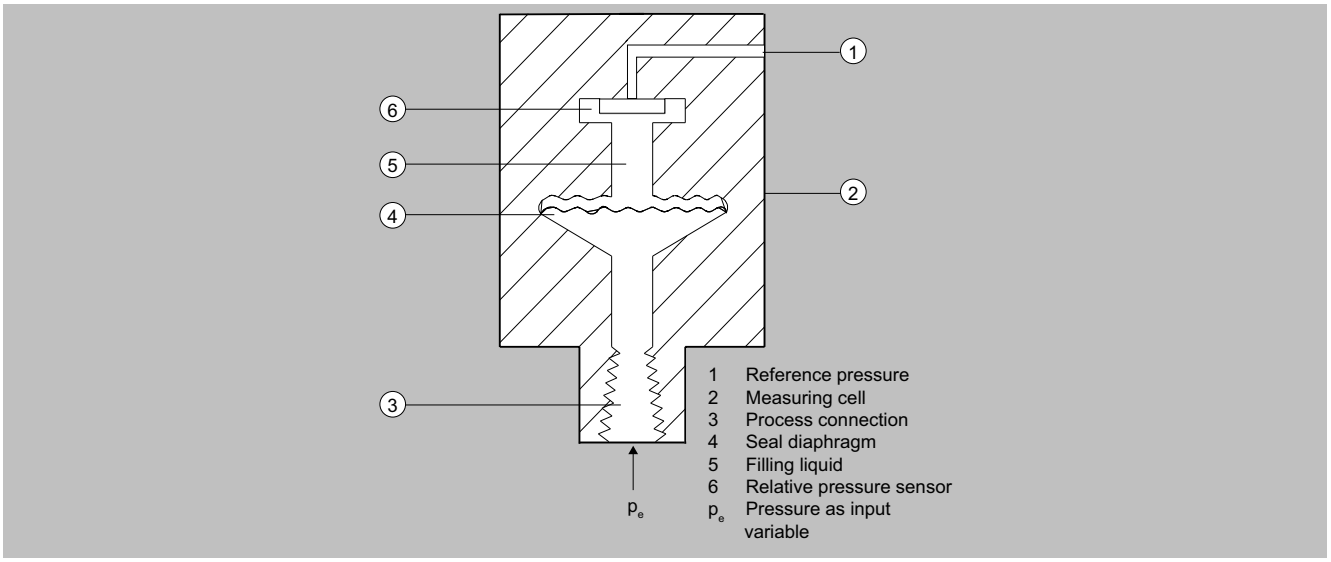
The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). One storage is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input keys (8), you can assign parameters to the pressure transmitter directly at the measuring point. The input keys can also be used to control the view of the measurement results, the error messages and the operating modes on the local display (9).

The results with status values and diagnostics data are transferred by cyclic data transmission on the FOUNDATION Fieldbus. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as National Instruments Configurator is required for this.

***Mode of operation of the measuring cells***

The process connections available include the following:



- G½
- ½-14 NPT
- Flush-mounted diaphragm:
  - Flanges according to EN
  - Flanges according to ASME
  - NuG and pharmaceutical connections

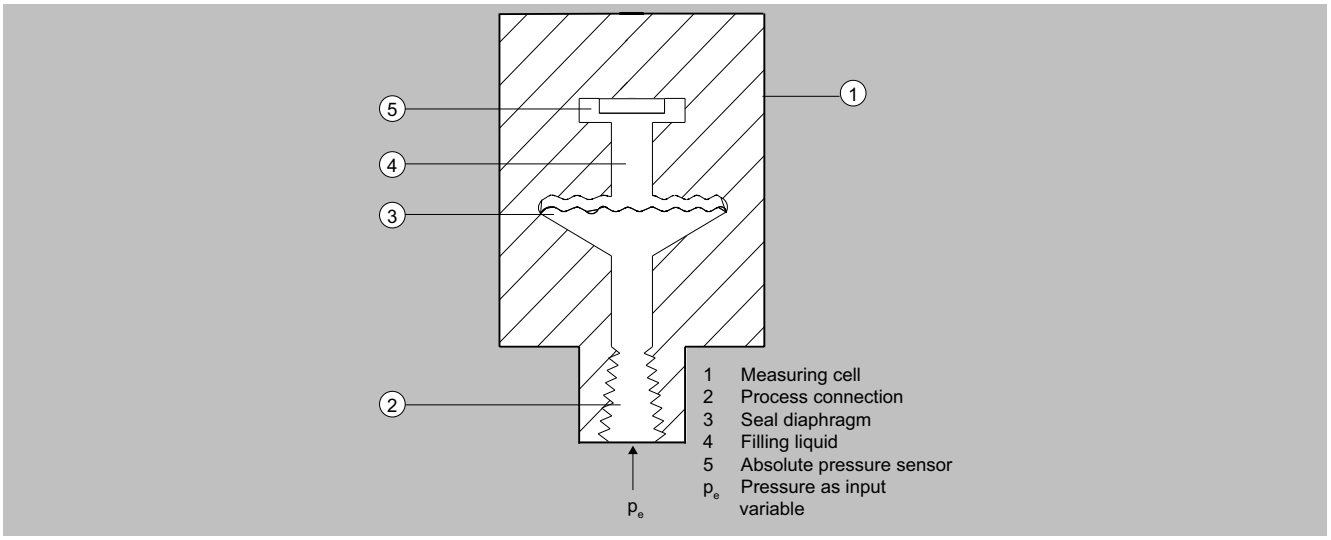
## Function (continued)

Measuring cell for gauge pressure



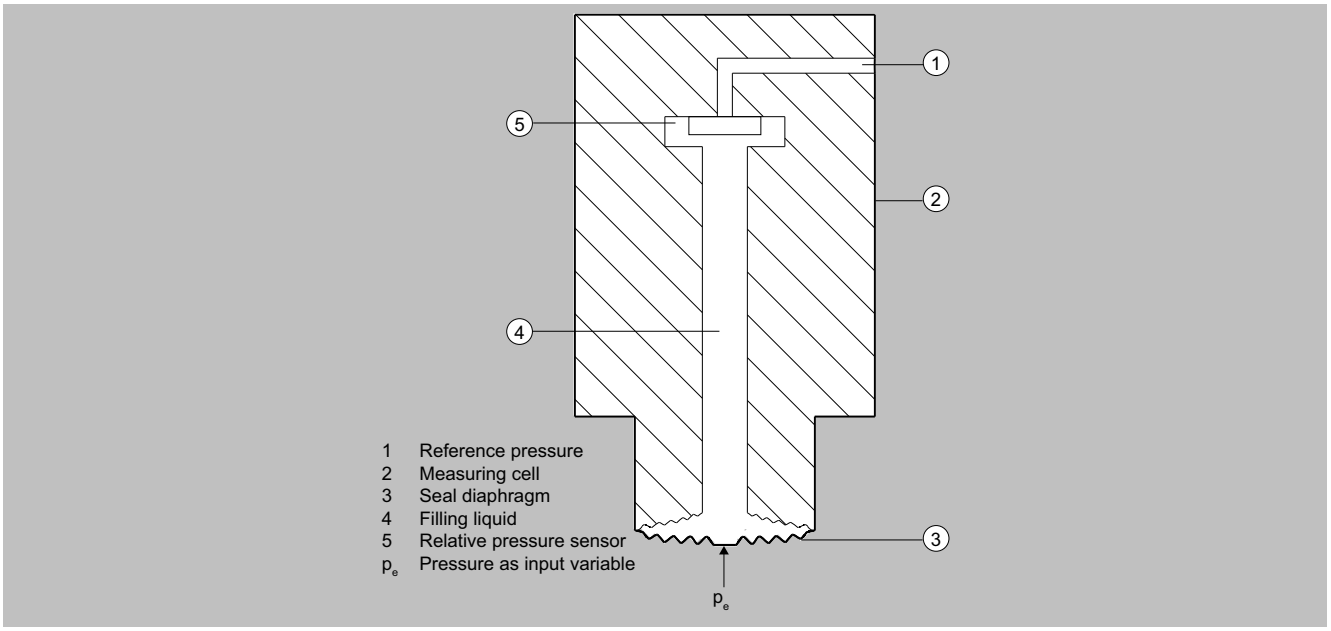
Measuring cell for gauge pressure, function diagram

The input pressure ($p_e$) is transferred via the seal diaphragm (4) and the filling liquid (5) to the gauge pressure sensor (6), displacing its measuring diaphragm. The displacement changes the resistance value of the four piezo resistors in the measuring diaphragm in a bridge circuit. The change in the resistance causes a bridge output voltage proportional to the input pressure.

Transmitters with measuring spans ≤ 63 bar (≤ 926.1 psi) measure the input pressure compared to atmospheric, transmitters with measuring spans of ≥ 160 bar (≥ 2352 psi) compared to a vacuum.

Measuring cell for absolute pressure

Measuring cell for absolute pressure, function diagram



The input pressure ($p_e$) is transferred via the seal diaphragm (3) and the filling liquid (4) to the absolute pressure sensor (5), displacing its measuring diaphragm. The displacement changes the resistance value of the four piezo resistors in the measuring diaphragm in a bridge circuit. The change in the resistance causes a bridge output voltage proportional to the input pressure.

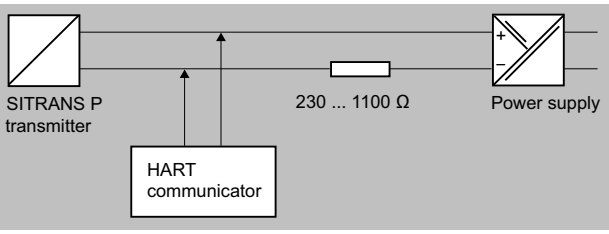
Measuring cell for absolute pressure, flush-mounted diaphragm, function diagram

© Siemens AG 2024

## Function (continued)

The input pressure ($p_e$) is transferred via the seal diaphragm (2) and the filling liquid (3) to the absolute pressure sensor (4), displacing its measuring diaphragm. The displacement changes the resistance value of the four piezo resistors in the measuring diaphragm in a bridge circuit. The change in the resistance causes a bridge output voltage proportional to the input pressure.

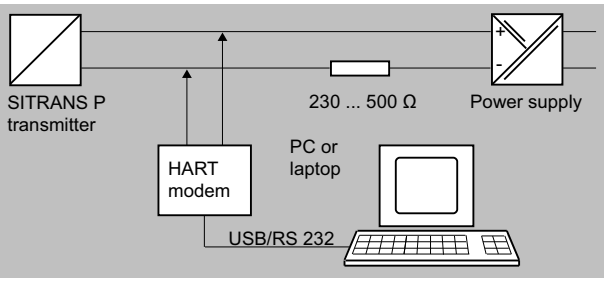
***Parameterization***



Depending on the version, there are a range of options for parameterizing the pressure transmitter and for setting or scanning the parameters.

Parameterization using the input keys (local operation)

With the input keys, you can easily set the most important parameters without any additional equipment.



Parameterization using HART

Parameterization using HART is performed with a HART Communicator or a PC.

Communication between a HART Communicator and a pressure transmitter

When parameterizing with the HART Communicator, the connection is made directly to the 2-wire cable.

HART communication between a PC communicator and a pressure transmitter

When parameterizing with a PC, the connection is made through a HART modem.

The signals needed for communication in conformity with the HART 5.x or 6.x protocols are superimposed on the output current using FSK (Frequency Shift Keying).

Adjustable SITRANS P300 parameters with HART

| Parameters | Input keys | HART |
|---|---|---|
| Lower range value | x | x |
| Upper range value | x | x |
| Electrical damping | x | x |
| Blind adjustment of the lower range value | x | x |
| Blind adjustment of the upper range value | x | x |
| Zero adjustment | x | x |
| Current simulator | x | x |
| Fault current | x | x |
| Disabling of buttons, write protection | x | x [1] |
| Type of unit, unit | x | x |
| Input of characteristic curve | | x |
| Freely-programmable LCD | | x |
| Diagnostic functions | | x |

[1] Except cancel write protection.

Diagnostic functions for SITRANS P300 with HART

- Zero correction display
- Event counter
- Limit transmitter
- Saturation alarm
- Min/max pointer
- Simulation functions
- Maintenance timer

Available physical units of display for SITRANS P300 with HART

| Physical variable | Physical units |
|---|---|
| Pressure (can also be preset in the factory) | Pa, MPa, kPa, bar, mbar, torr, atm, psi, g/cm², kg/cm², in $H_2O$, in $H_2O$ (4 °C), mm$H_2O$, ft$H_2O$ (20 °C), inHg, mmHg |
| Level (height data) | m, cm, mm, ft, in |
| Volume | m³, dm³, hl, yd³, ft³, in³, US gallon, Imp. gallon, bushel, barrel, barrel liquid |
| Mass | g, kg, t, lb, Ston, Lton, oz |
| Temperature | K, °C, °F, °R |
| Other | %, mA |

## Function (continued)

Parameterization through PROFIBUS interface

Fully digital communication through PROFIBUS PA, profile 3.0, is particularly user-friendly. PROFIBUS connects the SITRANS P300 PA to a process control system, e.g. SIMATIC PSC 7. Communication is possible even in a hazardous area.

For parameter assignment via PROFIBUS, you need suitable software, e.g. SIMATIC PDM (Process Device Manager)

Parameterization through FOUNDATION Fieldbus interface

Fully digital communication through FOUNDATION Fieldbus is particularly user-friendly. Through the FOUNDATION Fieldbus the P300 is connected to a process control system. Communication is possible even in a hazardous area.

For parameterization through the FOUNDATION Fieldbus you need suitable software, e.g. National Instruments Configurator.

Adjustable parameters for SITRANS P300 with PROFIBUS PA and FOUNDATION Fieldbus

| Adjustable parameters | Input keys | PROFIBUS PA and FOUNDATION Fieldbus |
|---|---|---|
| Electrical damping | x | x |
| Zero adjustment (correction of position) | x | x |
| Buttons and/or function disabling | x | x |
| Source of measured value display | x | x |
| Physical unit of display | x | x |
| Position of decimal point | x | x |
| Bus address | x | x |
| Adjustment of characteristic curve | x | x |
| Input of characteristic curve | | x |
| Freely-programmable LCD | | x |
| Diagnostic functions | | x |

Diagnostic functions for SITRANS P300 with PROFIBUS PA and FOUNDATION Fieldbus

Hygiene version

In the case of the SITRANS P300 with 7MF812.-... flush-mounted diaphragm, selected connections comply with the requirements of the EHEDG or 3A. You can find further details in the order form. Please note in particular that the seal materials used must comply with the requirements of 3A. Similarly, the filling liquids used must be FDA-compliant.

Note:

See section "Supplementary components" for supply units. A quick-start guide is included in the scope of delivery of the device.

1) If the quality inspection certificate (factory calibration) according to IEC 60770-2 is to be ordered for transmitters with mounted diaphragm seals, it is recommended that this certificate be ordered exclusively for the remote seals. Here, the measuring accuracy of the entire combination is certified.
2) If Inspection Certificate 3.1. is to be ordered for transmitters with mounted diaphragm seals, this certificate must also be ordered with the respective remote seals.
3) The diaphragm seal is to be specified with a separate article number and must be included with the transmitter article number, for example 7MF802.-..Y..-.... and 7MF0810-.....-0...
4) The standard measuring cell filling for configurations with remote seals (Y) is silicone oil.
5) Remote seal for direct mounting only available in combination with process connection ½-14 NPT.
6) M10 fastening thread: Max. measuring span 160 bar (2320 psi) fastening thread $^{7}/_{16}$-20 UNF and M12: Max. measuring span 400 bar (5802 psi)
7) Can only be ordered together with electrical connection option A.
8) Can only be ordered together with electrical connection option B, C or G.
9) Only together with HART electronics.
10) Without cable gland.
11) Local display cannot be rotated.

| **Preset bus address, possible range 1 ... 126**<br>Specify in plain text: Y25: ..... | **Y25** | PQ / FF |

Note:

Factory-mounting of valve manifolds, see Accessories. Only Y01, Y15, Y16, Y17, Y21, Y22 and Y25 are possible as factory preset.

1) If the quality inspection certificate (factory calibration) according to IEC 60770-2 is to be ordered for transmitters with mounted diaphragm seals, it is recommended that this certificate be ordered exclusively for the remote seals. Here, the measuring accuracy of the entire combination is certified.
2) If Inspection Certificate 3.1. is to be ordered for transmitters with mounted diaphragm seals, this certificate must also be ordered with the respective remote seals.
3) Special Viton seal included in scope of delivery (FKM; temperature range -20 ... +200 °C (-4 ... +392 °F))
4) Cannot be combined with order code P00. Can only be ordered together with silicon oil measuring cell filling.
5) Weld-in sockets can be ordered under Accessories.
6) 3A compliance ensured only when 3A compliant sealing rings are used.
7) Conformity according to 3A and EHEDG. The maximum permissible medium temperatures depend on the respective measuring cell fillings (see process conditions).
8) Measuring accuracies for PROFIBUS PA transmitters with option Y01 are calculated in the same way as for HART devices.
9) Preset value can only be change via SIMATIC PDM
10) 20 °C reference temperature.

***Lower measuring limit***

For 250 mbar/25 kPa/3.6 psi measuring cells, the lower measuring limit is 750 mbar a/75 kPa a/10.8 psi a. The measuring cell is vacuum-resistant up to 30 mbar a/3 kPa a/0.44 psi a.

- Measuring cell with silicone oil filling: 30 mbar a/3 kPa a/0.44 psi a
- Measuring cell with inert filling liquid: 30 mbar a/3 kPa a/0.44 psi a

***Upper measuring limit***

100% of the max. measuring span (for oxygen measurement max. 100 bar/10 MPa/1450 psi and 60 °C (140 °F) ambient temperature/medium temperature)

**Absolute pressure input**

Measured variable: Absolute pressure

Measuring span (continuously adjustable) or nominal measuring range, max. permissible operating pressure (in accordance with 2014/68/EU Pressure Equipment Directive) and max. permissible test pressure (pursuant to DIN 16086)

| HART | PROFIBUS PA/FOUNDATION Fieldbus | | |

## Overview

The SITRANS P300 transmitter for gauge and absolute pressure can be delivered factory-fitted with the following valve manifold 7MF9011-4EA and 7MF9011-4FA.

## Design

The 7MF9011-4EA valve manifolds are sealed with PTFE sealings between the transmitter and the valve manifold as standard. Soft iron, stainless steel and copper sealings are also available for sealing purposes if preferred.

The 7MF9011-4FA valve manifolds are sealed with PTFE sealing tape between the transmitter and the valve manifold.

The complete unit is checked for leaks under pressure after assembly (air pressure 6 bar (87 psi)) and certified with a factory certificate according to EN 10204 - 2.2.

All valve manifolds should preferably be secured with the corresponding mounting brackets. The transmitters are mounted on the valve manifold and not on the unit itself.

If you order a mounting bracket when choosing the option "Factory-mounting of valve manifolds", you will receive a mounting bracket for the valve manifold instead of a bracket for mounting the transmitter.

If you order an inspection certificate 3.1 to EN 10204 after choosing the option "Factory-mounting of valve manifolds", a separate certificate is provided for the transmitter and for the valve manifold.

## Overview

SITRANS P300, pressure transmitter with PMC connection for paper industry

The SITRANS P300 pressure transmitter has been fitted with special process connections for the paper industry. With the two process connection threads 1½" and 1" flush at the front, the SITRANS P300 transmitter can be used in all processes of the paper industry.

The SITRANS P300 pressure transmitter is a digital pressure transmitter featuring extensive user-friendliness and high accuracy. The parameterization is performed using control keys or via HART communication or via PROFIBUS PA or FOUNDATION Fieldbus interface.

The comprehensive functionality makes for precise adjustment of the pressure transmitter to the requirements of the plant. Operation is very simple in spite of the numerous setting options.

Pressure transmitters of the "Intrinsic safety" and "Flameproof" type of protection can be installed within hazardous areas (zone 1) or in zone 0. The devices are provided with an EC type-examination certificate and comply with the corresponding harmonized European standards (ATEX).

Various versions of the pressure transmitters are available for measuring:

- Gauge pressure
- Level
- Volume level
- Mass level

## Benefits

- High quality and service life
- High reliability even under extreme chemical and mechanical loads, e.g. abrasion
- For corrosive and non-corrosive gases, vapors and liquids
- Extensive diagnostics and simulation functions
- Minimal conformity error
- Small long-term drift
- Wetted parts made of Hastelloy
- Continuously adjustable measuring spans from 0.03 bar to 16 bar (0.43 psi to 232 psi) with HART interface
- Nominal measuring ranges from 1 bar to 16 bar (14.5 psi to 232 psi) with PROFIBUS PA interface
- High measuring accuracy
- Parameterization using control keys or HART and/or PROFIBUS PA or FOUNDATION Fieldbus

## Application

The SITRANS P300 pressure transmitter for gauge pressure with PMC connection is used in the paper industry.

Pressure transmitters of the "Intrinsic safety" and "Flameproof" type of protection can be installed within hazardous areas (zone 1) or in zone 0. The pressure transmitters are provided with an EC type-examination certificate and comply with the corresponding harmonized European standards (ATEX).

Pressure transmitters with the type of protection "Intrinsic safety" for use in zone 0 may be operated with power supply units of category "ia" and "ib".

The pressure transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

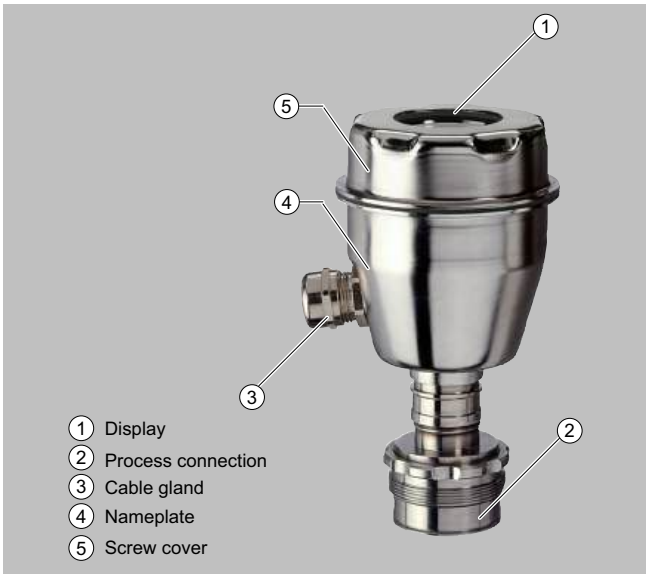
The pressure transmitter can be operated locally over 3 input buttons or programmed externally over HART or over PROFIBUS PA or FOUNDATION Fieldbus interface.

Measuring span (continuously adjustable)

P300 with HART: 0.01 to 16 bar (0.15 to 232 psi)

Nominal measuring range

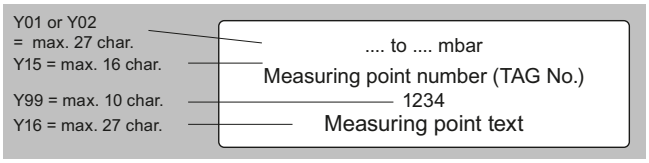
For P300 with PROFIBUS PA and FOUNDATION Fieldbus:
1 to 16 bar (14.5 to 232 psi)



© Siemens AG 2024

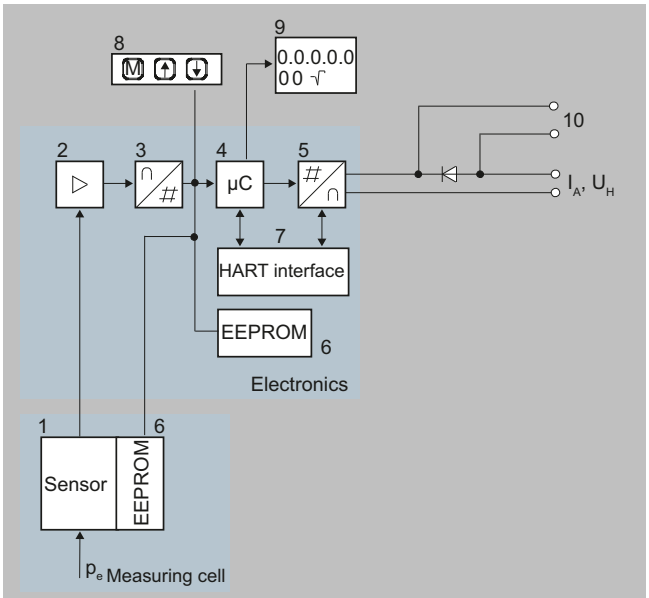
## Design

The SITRANS P300 pressure transmitter consists of:



- electronics
- Enclosure
- Measuring cell

Perspective view of the SITRANS P300



The enclosure has a screw-on cover (5) and, depending on the version, comes with or without an inspection window. The electrical terminal compartment, the buttons for operation of the device and, depending on the version, the display are located under this cover. The connections for the auxiliary power $U_H$ and the shield are in the terminal compartment. The cable gland is on the side of the enclosure. The measuring cell with the process connection (2) is located on the bottom of the enclosure. The measuring cell with the process connection may differ from the one shown in the diagram, depending on the device design.

***Example of attached measuring point label***

## Function

***Operation of electronics with HART communication***

1 Measuring cell sensor
2 Instrument amplifier
3 Analog-to-digital converter
4 Microcontroller
5 Digital-to-analog converter
6 One non-volatile memory each in the measuring cell and electronics
7 HART interface
8 Three input keys (local operation)
9 Digital display
10 Diode circuit and connection for external ammeter
$I_A$ Output current 4 ... 20 mA
$U_H$ Power supply
$P_e$ Input variable

Function diagram of electronics

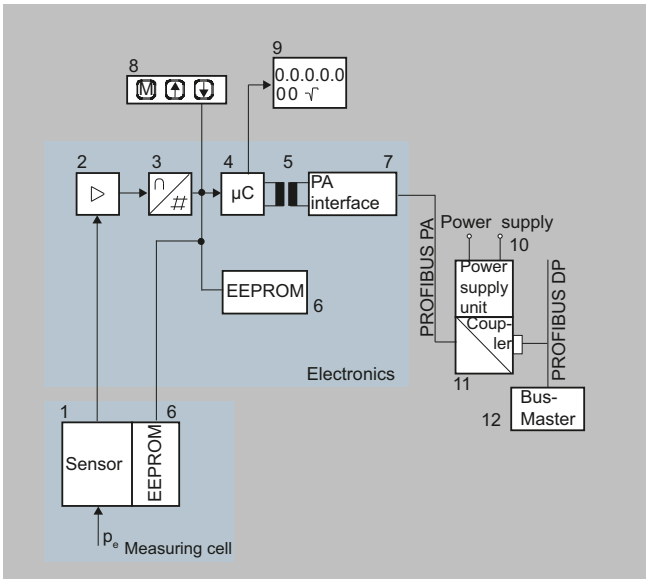
The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the measuring amplifier (2) and digitalized in the analog-to-digital converter (3). The digital information is evaluated in a microcontroller, corrected for linearity and temperature response, and converted in a digital-to-analog converter (5) into an output current of 4 to 20 mA.

The diode circuit (10) protects against incorrect polarity.

The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). One memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the 3 input buttons (8), you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the measurement results, the error messages and the operating modes on the display (9).

The HART modem (7) permits parameterization using a protocol according to the HART specification.



The pressure transmitters with measuring spans ≤ 63 bar measure the input pressure compared to atmosphere, transmitters with spans ≥ 160 bar the input pressure compared to vacuum.

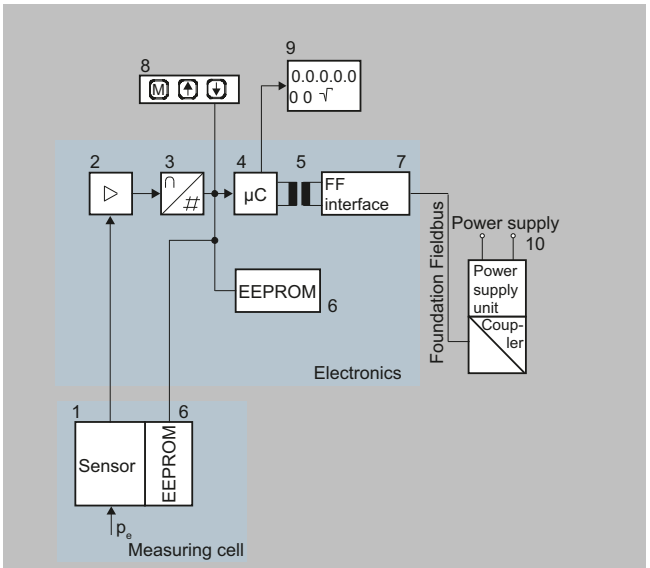
## Function (continued)

***Operation of electronics with PROFIBUS PA communication***

| | | | |
|---|---|---|---|
| 1 | Measuring cell sensor | 8 | Three input keys (local operation) |
| 2 | Instrument amplifier | 9 | Digital display |
| 3 | Analog-to-digital converter | 10 | Power supply |
| 4 | Microcontroller | 11 | DP/PA coupler or link |
| 5 | Electrical isolation | 12 | Bus master |
| 6 | One non-volatile memory each in the measuring cell and electronics | $p_e$ | Input variable |
| 7 | PROFIBUS PA interface | | |

Function diagram of electronics

The bridge output voltage created by the sensor (1, Figure "Function diagram of electronics") is amplified by the measuring amplifier (2) and digitalized in the analog-to-digital converter (3). The digital information is evaluated in the microcontroller, corrected for linearity and temperature response, and made available on the PROFIBUS PA via an electrically isolated PA interface (7).



The data specific to the measuring cell, the electronics data, and the parameter data are stored in the two non-volatile memories (6). One memory is coupled to the measuring cell, the other to the electronics. As the result of this modular design, the electronics and the measuring cell can be replaced separately from each other.

Using the three input buttons (8), you can parameterize the pressure transmitter directly at the measuring point. The input buttons can also be used to control the view of the measurement results, the error messages and the operating modes on the display (9).

The results with status values and diagnostics data are transferred by cyclic data transmission on the PROFIBUS PA. Parameterization data and error messages are transferred by acyclic data transmission. Special software such as SIMATIC PDM is required for this.

## Function (continued)

***Operation of electronics with FOUNDATION Fieldbus communication***

## Function (continued)

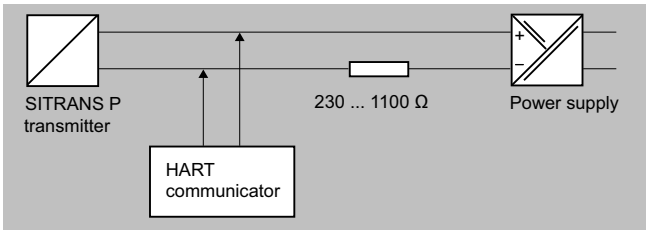
***Mode of operation of the measuring cell***

Measuring cell for gauge pressure with flush-mounted diaphragm

Measuring cell for gauge pressure, with flush-mounted diaphragm for paper industry, function diagram

The pressure $p_e$ is applied through the process connection (2, Figure "Measuring cell for gauge pressure, with flush-mounted diaphragm for paper industry, function diagram") to the measuring cell (1). This pressure is subsequently transmitted further through the seal diaphragm (3) and the filling liquid (4) to the silicon pressure sensor (5) whose measuring diaphragm is then flexed. This changes the resistance of the four piezo-resistors fitted in the diaphragm in a bridge circuit. This change in resistance results in a bridge output voltage proportional to the input pressure.

***Parameterization***

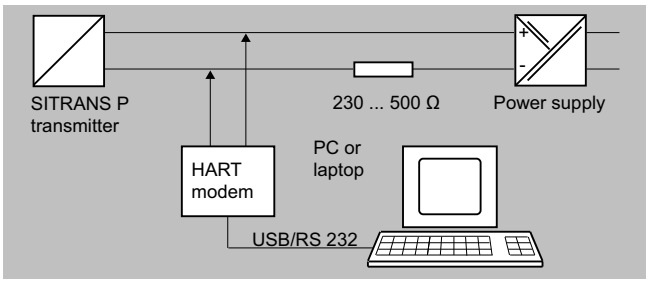


Depending on the version, there are a range of options for parameterizing the pressure transmitter and for setting or scanning the parameters.

Parameterization using the input buttons (local operation)

With the input buttons, you can easily set the most important parameters without any additional equipment.

Parameterization using HART



Parameterization using HART is performed with a HART Communicator or a PC.

Communication between a HART Communicator and a pressure transmitter

When parameterizing with the HART Communicator, the connection is made directly to the 2-wire cable.

## Function (continued)

HART communication between a PC communicator and a pressure transmitter

When parameterizing with a PC, the connection is made through a HART modem.

The signals needed for communication in conformity with the HART 5.x or 6.x protocols are superimposed on the output current using FSK (Frequency Shift Keying).

Adjustable parameters for SITRANS P300 with HART

| Parameters | Input buttons | HART |
|---|---|---|
| Lower range value | x | x |
| Upper range value | x | x |
| Electrical damping | x | x |
| Blind adjustment of the lower range value | x | x |
| Blind adjustment of the upper range value | x | x |

## Function (continued)

Parameterization through PROFIBUS interface

Fully digital communication through PROFIBUS PA, profile 3.0, is particularly user-friendly. Communication is possible even in a hazardous area.

For parameter assignment via PROFIBUS, you need suitable software, e.g. SIMATIC PDM (Process Device Manager)

Parameterization through FOUNDATION Fieldbus interface

Fully digital communication through FOUNDATION Fieldbus is particularly user-friendly. Communication is possible even in a hazardous area.

For parameterization through the FOUNDATION Fieldbus you need suitable software, e.g. National Instruments Configurator.

Adjustable parameters for SITRANS P300 with PROFIBUS PA and FOUNDATION Fieldbus

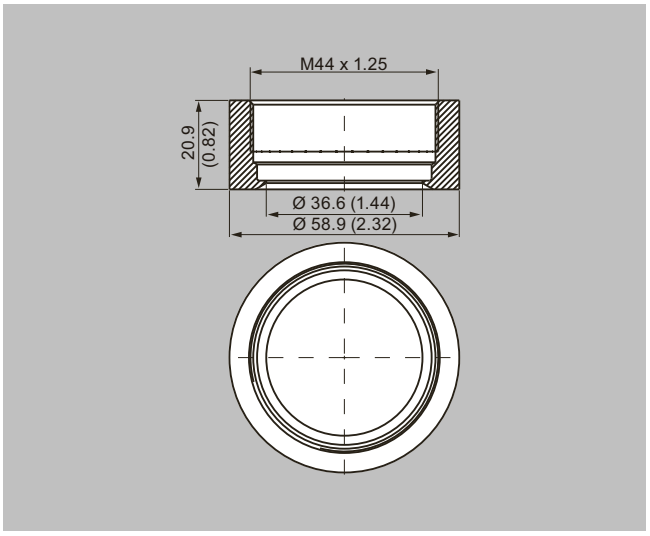
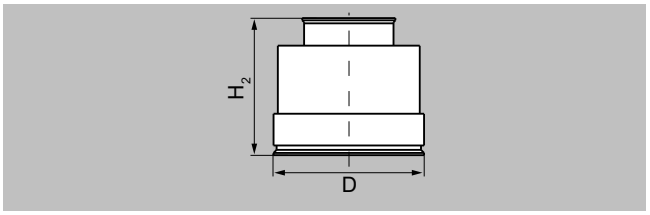
## Dimensional drawings



SITRANS P300 pressure transmitter for gauge pressure, with PMC connection, dimensions in mm (inch)

The figure shows a SITRANS P300 with an example flange. In this drawing, the height is subdivided into $H_1$ and $H_2$:

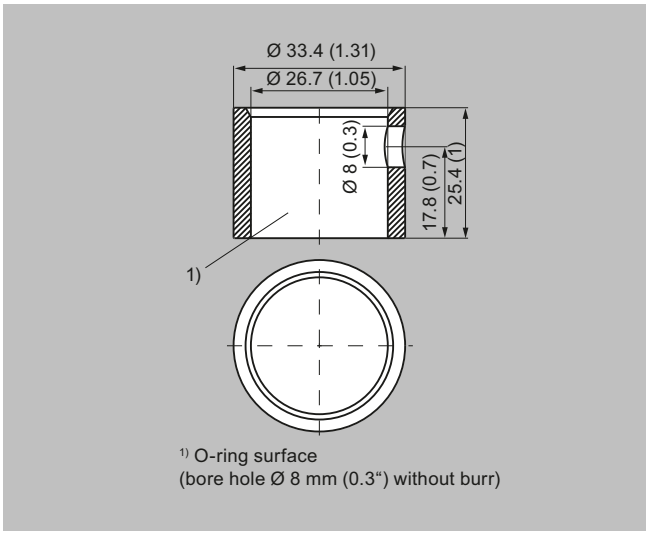


- $H_1$ = Height of the SITRANS P300 up to a defined cross-section
- $H_2$ = Height of the flange up to this defined cross-section

Only the height $H_2$ is indicated in the dimensions of the flanges.

***PMC Style standard weldable sockets***

PMC Style Standard weldable sockets, dimensions in mm (inch)



Material: Stainless steel, mat. no. 1.4404/316L
ØD = 40.9 mm (1.6")
$H_2$ = approx. 36.8 mm (1.4")

## Overview

SITRANS P320/P420 pressure transmitters are available in various versions for measuring:

- Gauge pressure
- Absolute pressure
- Differential pressure
- Level
- Volume flow
- Mass flow

© Siemens AG 2024

## Overview

SITRANS P320/P420 pressure transmitters are digital pressure transmitters featuring extensive user-friendliness and high accuracy. The parameter assignment is performed using input buttons or the HART interface.

The comprehensive functionality makes for precise adjustment of the pressure transmitter to the requirements of the plant. Operation is very user-friendly in spite of the numerous setting options.

Due to their advanced diagnostic functionalities according to NAMUR NE107, the SITRANS P320/P420 pressure transmitters are very suitable for use in chemical plants. Thanks to the advanced diagnostic functions and the process value storage, the SITRANS P420 is "Ready for Digitalization".

The "Remote Safety Handling" function saves customers significant amounts of time and money, because the SIL function can be switched on and validated remotely via SIMATIC PDM. This eliminates travel times and on-site operation via the local display or keyboard.

Parameter assignment using the HART protocol is very easy and quick thanks to the innovative EDD with integrated Quick Start wizard.

The transmitters can be equipped with various types of remote seals for special applications such as the measurement of highly viscous substances.

SITRANS P320/P420 pressure transmitters are available in various versions for measuring:

- Gauge pressure
- Absolute pressure
- Differential pressure
- Level
- Volume flow
- Mass flow

© Siemens AG 2024

## Benefits

- Diagnostic functions in accordance with NAMUR recommendation NE107
- SIL devices developed according to IEC 61508
- SIL validation on the device or remotely with SIMATIC PDM
- Reduction of internal inductance for Ex applications to LI = 0
- Step response time for pressure type T63 = 105 ms and for differential pressure type 135 ms.
- Minimal conformity error
- Very low temperature influence
- Very good long-term stability
- High quality and service life
- High reliability even under extreme chemical and mechanical loads
- For corrosive and non-corrosive gases, vapors and liquids
- Extensive diagnostics and simulation functions
- Separate replacement of measuring cell and electronics without recalibration
- Wetted parts made of high-grade materials (e.g., stainless steel, alloy, gold, Monel, tantalum)
- Infinitely adjustable spans from 0.01 bar to 700 bar (0.15 psi to 10153 psi)
- Convenient parameterization over 4 input buttons and HART interface

## Application

SITRANS P320/P420 pressure transmitters can be used in industrial areas with extreme chemical and mechanical loads.

The pressure transmitters can be used in zone 1 or zone 0 with the corresponding Ex approval.

The pressure transmitters can be equipped with various designs of remote seals for special applications such as the measurement of highly viscous substances.

The pressure transmitter can be operated locally over 4 input buttons or programmed externally over HART interface.

***Pressure transmitters for gauge pressure***

Measured variable:

- Gauge pressure of corrosive and non-corrosive gases, vapors and liquids.

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART: 0.01 bar to 700 bar (0.15 psi to 10153 psi)

There are two series:

- Gauge pressure series
- Differential pressure series

***Pressure transmitters for absolute pressure***

Measured variable:

- Absolute pressure of corrosive and non-corrosive gases, vapors and liquids.

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART: 8.3 mbar a to 160 bar a (0.12 to 2 321 psi a)

There are two series:

- Gauge pressure series
- Differential pressure series

***Pressure transmitters for differential pressure and flow***

Measured variables:

- Differential pressure
- Small positive or negative overpressure
- Flow $q \sim \sqrt{\Delta p}$ (together with a primary differential pressure transducer (see section "Flowmeters"))

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART: 1 mbar to 160 bar (0.0145 to 2 321 psi)

***Pressure transmitters for level***

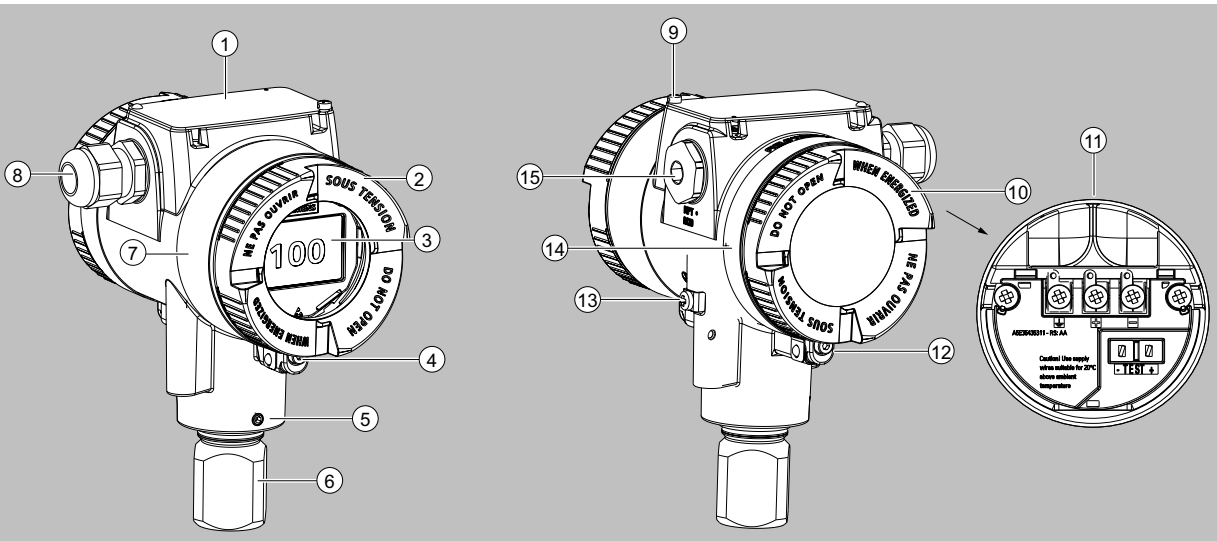
Measured variable:

- Level of corrosive and non-corrosive liquids in open and closed vessels.

Measuring span (infinitely adjustable)

- For SITRANS P320/P420 with HART:
  25 mbar to 5 bar (0.363 to 72.5 psi)

Type of the mounting flange:



- EN 1092-1 flanges
- ASME B16.5 flanges
- J.I.S. flanges
- Diverse range of sealing surface forms available

## Design

Depending on the customer-specific order, the device comprises different parts.

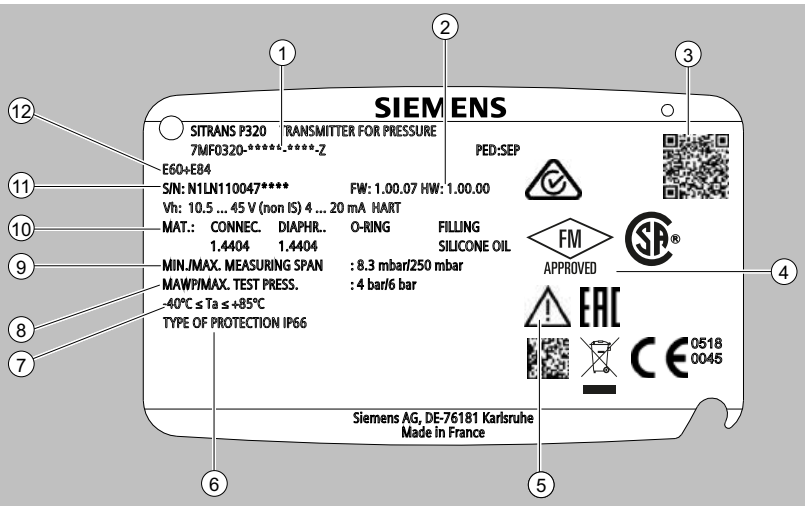
1. Cover over buttons and nameplate with general information
2. Cover (front) with glass pane (optional)
3. Display (optional)
4. Safety catch (front)
5. Locking screw for locking the enclosure
6. Process connection
7. Approval label with approval information
8. Cable inlet, optionally with cable gland
9. Locking screw for the cover over the buttons
10. Cover (rear) for electrical terminal compartment
11. Electrical terminal compartment
12. Safety catch (back)
13. Ground terminal
14. Nameplate with information on the remote seal
15. Blanking plug

Device front view

- The electronics enclosure is made of die cast aluminum or precision cast stainless steel.
- The enclosure has a removable cover at the front and the back.
- Depending on the device design, the front cover (2) may be designed with a glass pane.
- The cable inlet (8) to the electrical terminal compartment is at the side; either the left or right-hand one can be used. The unused opening is closed with a blanking plug (15).
- The ground terminal (13) is located on the side.
- The electrical terminal compartment (11) for the auxiliary power and shield is accessible when you remove the back cover (10).
- The measuring cell with process connection (6) is located in the bottom part of the enclosure.

  The measuring cell is prevented from rotating by a locking screw (5).
- Thanks to the modular design of the pressure transmitter, the measuring cell and application electronics or terminal compartment can be replaced if required.
- The button cover (1) is located on the upper face of the enclosure. The nameplate with general information is located on the cover over the buttons.

***Nameplates***



Nameplate

The nameplate with the article no. and other important information, such as design details and technical data, is located on the cover over the buttons.

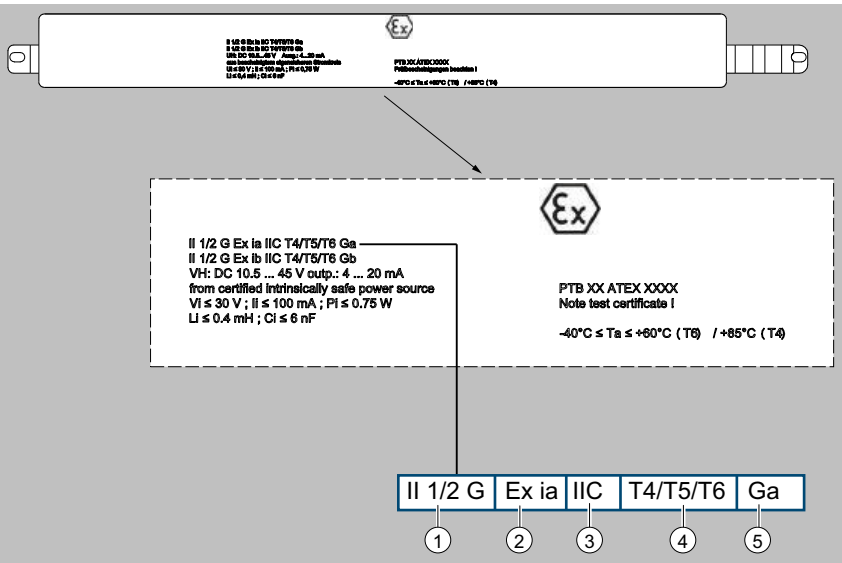
## **Design** (continued)

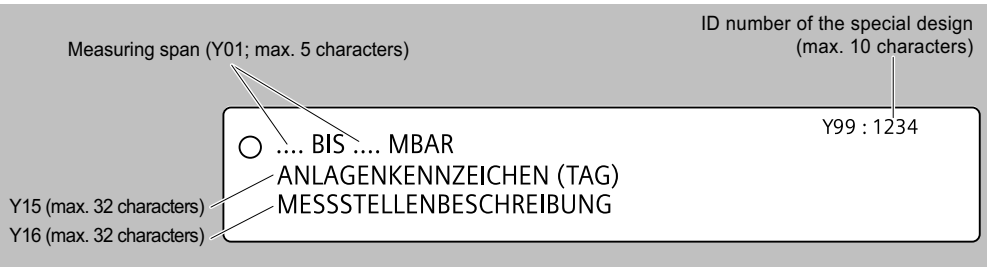
1. Article number
2. Firmware and hardware identification
3. QR code to the mobile website with device-specific information
4. Conformity with country-specific directives
5. Note operating instructions, certificates and approvals
6. Protection class
7. Permitted ambient temperature for the hazardous area of the corresponding temperature class
8. Maximum allowable operating pressure / maximum allowable test pressure
9. Minimum/maximum measuring span
10. Material: connection, diaphragm, O-ring, oil
11. Serial number
12. Order supplement (options, order code)



Certification label with approval information

The certification label with approval information is located on the front of the enclosure.

© Siemens AG 2024

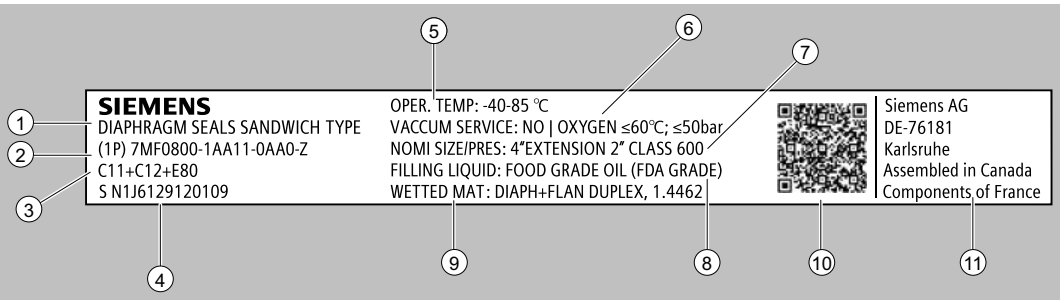


## Design (continued)

1. Characteristics of the hazardous area
2. Type of protection
3. Group (gas, dust)
4. Maximum surface temperature (temperature class)
5. Device protection level

Tag plate

The tag plate is fastened with a wire under the front cover.



Nameplate with information on the remote seals

The nameplate with information on the remote seals is located on the back of the enclosure.

## Design (continued)

1. Diaphragm seals of sandwich type
2. Article number
3. Order supplement (options, order code)
4. Serial number
5. Operating temperature
6. Vacuum pressure service: No, oxygen ≤ 60 °C; ≤ 50 bar
7. Nominal diameter/pressure: 4 inch, 50 mm tube length, CLASS 600
8. Filling liquid: Food grade oil (FDA-compliant)
9. Wetted materials: Diaphragm duplex, 1.4462
10. QR code to mobile website with device-specific information
11. Assembly and manufacturing location

1) Han 8D is identical to Han 8U.

| Communication | |
|---|---|
| **HART** | |
| HART | 230 ... 1 100 Ω |
| Protocol | HART 7 |
| Software for computer | SIMATIC PDM |
| **PROFIBUS PA** | |
| Simultaneous communication with master class 2 (max.) | 4 |
| The address can be set using | Configuration tool or local operation (default setting address 126) |
| Cyclic data usage | |
| • Output byte | ≤ 35 (7 measured values) |
| • Input byte | 0, 1, or 2 (register operation mode and reset function for dosing) |
| Internal preprocessing | |
| Device profile | PROFIBUS PA Profile Version 4.01 Class B. Cyclic data usage compatible with version 3.XX |
| Number of function blocks | 7 |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| • Register (totalizer) | Can be reset, preset, optional direction of counting, simulation function of register output |
| - Limit monitoring | One upper and lower warning limit and one alarm limit respectively |
| • Physical block | 1 |
| Transducer blocks | 1 |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |

| Communication | |
|---|---|
| - Specification of a vessel characteristic curve with | Max. 30 nodes |
| - Square-rooted characteristic curve for flow measurement | Yes |
| - Tank characteristic curve for volume measurement | Yes |
| - Low flow cut-off and implementation point of square-root extraction | Parameterizable |
| - Simulation function for measured pressure value and sensor temperature | Constant value or by means of parameterizable ramp function |
| **FOUNDATION Fieldbus** | |
| Device profile | FF ITK 6 |
| Function blocks | 3 function blocks analog input, 1 function block PID |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input (can be locked within the device with a bridge) |
| - Failure mode | Parameterizable (last good value, substitute value, incorrect value) |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| - Square-rooted characteristic curve for flow measurement | Yes |
| • PID | Standard FOUNDATION Fieldbus function block |
| • Physical block | 1 resource block |
| Transducer blocks | 1 transducer block Pressure with calibration, 1 transducer block LCD |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |

## Technical specifications (continued)

| Communication | |
|---|---|
| - Monitoring of sensor limits | Yes |
| - Simulation function: pressure measurement, sensor temperature and electronics temperature | Constant value or by means of parameterizable ramp function |

## Dimensional drawings

1. Electronics side, local display (longer overall length for cover with glass pane)[1]
2. Connection side
3. Electrical connection:
   - M20 x 1.5[3] screw gland
   - ½-14 NPT screw gland
   - Han 7D/Han 8D[2][3] device plug
   - M12 device plug[2][3]
4. Harting adapter
5. Cover over buttons and nameplate with general information
6. Blanking plug
7. Safety catch (only for "flameproof enclosure" type of protection)
8. Process connection: G½B connection pin or oval flange
9. Mounting bracket (optional)

[1] In addition, allow approx. 22 mm (0.87 inch) for the thread length when removing the covers
[2] Not with "flameproof enclosure" type of protection
[3] Not with type of protection "FM + CSA [is + XP]"

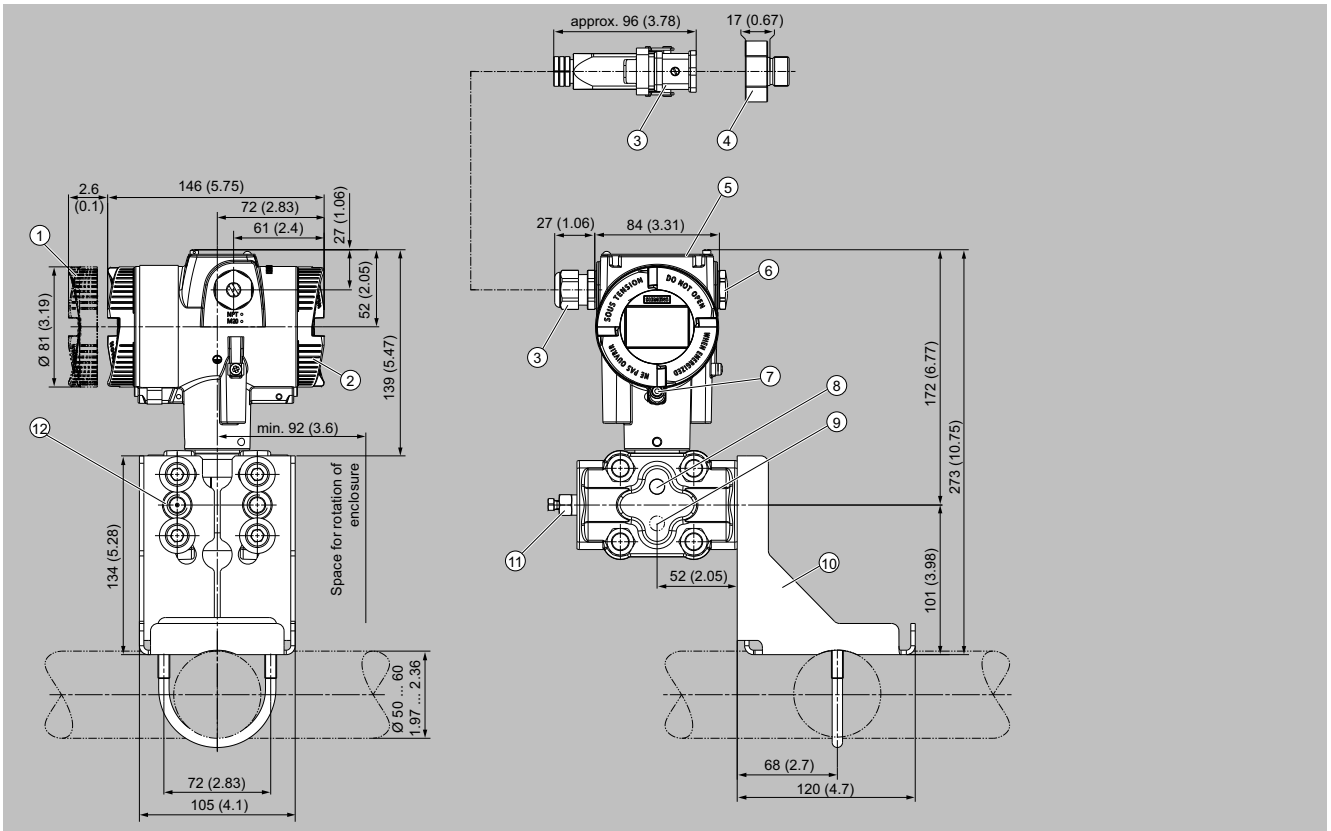
[1] Han 8D is identical to Han 8U.



| Communication | |
|---|---|
| **HART** | |
| HART | 230 ... 1 100 Ω |
| Protocol | HART 7 |
| Software for computer | SIMATIC PDM |
| **PROFIBUS PA** | |
| Simultaneous communication with master class 2 (max.) | 4 |
| The address can be set using | Configuration tool or local operation (default setting address 126) |
| Cyclic data usage | |
| • Output byte | ≤ 35 (7 measured values) |
| • Input byte | 0, 1, or 2 (register operation mode and reset function for dosing) |
| Internal preprocessing | |
| Device profile | PROFIBUS PA Profile Version 4.01 Class B. Cyclic data usage compatible with version 3.XX |
| Number of function blocks | 7 |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| • Register (totalizer) | Can be reset, preset, optional direction of counting, simulation function of register output |
| - Limit monitoring | One upper and lower warning limit and one alarm limit respectively |
| • Physical block | 1 |
| Transducer blocks | 1 |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |

| Communication | |
|---|---|
| - Specification of a vessel characteristic curve with | Max. 30 nodes |
| - Square-rooted characteristic curve for flow measurement | Yes |
| - Tank characteristic curve for volume measurement | Yes |
| - Low flow cut-off and implementation point of square-root extraction | Parameterizable |
| - Simulation function for measured pressure value and sensor temperature | Constant value or by means of parameterizable ramp function |
| **FOUNDATION Fieldbus** | |
| Device profile | FF ITK 6 |
| Function blocks | 3 function blocks analog input, 1 function block PID |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input (can be locked within the device with a bridge) |
| - Failure mode | Parameterizable (last good value, substitute value, incorrect value) |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| - Square-rooted characteristic curve for flow measurement | Yes |
| • PID | Standard FOUNDATION Fieldbus function block |
| • Physical block | 1 resource block |
| Transducer blocks | 1 transducer block Pressure with calibration, 1 transducer block LCD |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Simulation function: pressure measurement, sensor temperature and electronics temperature | Constant value or by means of parameterizable ramp function |

## Dimensional drawings

1. Electronics side, local display (longer overall length for cover with glass pane)[1]
2. Connection side
3. Electrical connection:
   - M20 x 1,5[2] screw gland
   - ½-14 NPT screw gland
   - Han 7D/Han 8D[2][3] device plug
   - M12 device plug[2][3]
4. Harting adapter
5. Cover over buttons and nameplate with general information
6. Blanking plug
7. Safety catch (only for "flameproof enclosure" type of protection)
8. Lateral ventilation for liquid measurement (Standard)
9. Lateral ventilation for gas measurement (order option K85)
10. Mounting bracket (optional)
11. Sealing plug with valve (optional)
12. Process connection: ¼-18 NPT (IEC 61518)

[1] In addition, allow approx. 22 mm (0.87 inch) for the thread length when removing the covers
[2] Not with "flameproof enclosure" type of protection
[3] Not with type of protection "FM + CSA" [is + XP]"

1) The MAWP value of the pressure transmitter can be lower than the PN value of the mounting flange and vice versa.
To determine the maximum permissible operating pressure and the maximum permissible test pressure, use the lowest value as reference.
2) Observe the temperature limits in the process connection standards (e.g. DIN 32676 and DIN 11851) for the maximum medium temperature for flush-mounted process connections.
3) Han 8D is identical to Han 8U.

| Communication | |
|---|---|
| **HART** | |
| HART | 230 ... 1 100 Ω |
| Protocol | HART 7 |
| Software for computer | SIMATIC PDM |
| **PROFIBUS PA** | |
| Simultaneous communication with master class 2 (max.) | 4 |
| The address can be set using | Configuration tool or local operation (default setting address 126) |
| Cyclic data usage | |
| • Output byte | ≤ 35 (7 measured values) |
| • Input byte | 0, 1, or 2 (register operation mode and reset function for dosing) |

| Communication | |
|---|---|
| Internal preprocessing | |
| Device profile | PROFIBUS PA Profile Version 4.01 Class B. Cyclic data usage compatible with version 3.XX |
| Number of function blocks | 7 |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| • Register (totalizer) | Can be reset, preset, optional direction of counting, simulation function of register output |

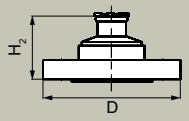
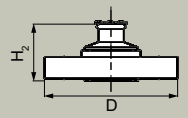
## Dimensional drawings

1. Electronics side, local display (longer overall length for cover with glass pane)[1]
2. Connection side
3. Electrical connection:
   - M20 x 1,5[3] screw gland
   - ½-14 NPT screw gland
   - Han 7D/Han 8D[2][3] device plug
   - M12 device plug[2][3]
4. Cover over buttons and nameplate with general information
5. Blanking plug
6. Safety catch (only for "flameproof enclosure" type of protection)
7. Process connection

1) In addition, allow approx. 22 mm (0.87 inch) for the thread length when removing the covers
2) Not with "flameproof enclosure" type of protection
3) Not with type of protection "FM + CSA" [is + XP]"

SITRANS P320/P420 pressure transmitter, with flush-mounted diaphragm, dimensions in mm (inch)



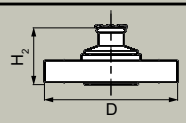


This figure consists of a SITRANS P320/P420 with an example flange. In this figure, the height is divided into $H_1$ and $H_2$.

$H_1$ = Height of the SITRANS P320/P420 up to a defined cross-section

$H_2$ = Height of the flange up to this defined cross-section

Only the height $H_2$ is indicated in the dimensions of the flanges.



***Flanges according to EN and ASME***

| Flange | Order code | DN | PN | ØD | $H_2$ |
|---|---|---|---|---|---|
| **EN 1092-1** | | | | | |
|  | M03 | 50 | 16 | 165 mm (6.5 inches) | Approx. 52 mm (2 inches) |
| | M05 | 80 | 16 | 200 mm (7.9 inches) | |
| | M10 | 25 | 40 | 115 mm (4.5 inches) | |
| | M12 | 40 | 40 | 150 mm (5.9 inches) | |
| | M13 | 50 | 40 | 165 mm (6.5 inches) | |

## Technical specifications (continued)

| Communication | |
|---|---|
| Cyclic data usage | |
| • Output byte | ≤ 35 (7 measured values) |
| • Input byte | 0, 1, or 2 (register operation mode and reset function for dosing) |
| Internal preprocessing | |
| Device profile | PROFIBUS PA Profile Version 4.01 Class B. Cyclic data usage compatible with version 3.XX |
| Number of function blocks | 7 |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| • Register (totalizer) | Can be reset, preset, optional direction of counting, simulation function of register output |
| - Limit monitoring | One upper and lower warning limit and one alarm limit respectively |
| • Physical block | 1 |
| Transducer blocks | 1 |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Specification of a vessel characteristic curve with | Max. 30 nodes |
| - Square-rooted characteristic curve for flow measurement | Yes |
| - Tank characteristic curve for volume measurement | Yes |

| Communication | |
|---|---|
| - Low flow cut-off and implementation point of square-root extraction | Parameterizable |
| - Simulation function for measured pressure value and sensor temperature | Constant value or by means of parameterizable ramp function |
| **FOUNDATION Fieldbus** | |
| Device profile | FF ITK 6 |
| Function blocks | 3 function blocks analog input, 1 function block PID |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input (can be locked within the device with a bridge) |
| - Failure mode | Parameterizable (last good value, substitute value, incorrect value) |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| - Square-rooted characteristic curve for flow measurement | Yes |
| • PID | Standard FOUNDATION Fieldbus function block |
| • Physical block | 1 resource block |
| Transducer blocks | 1 transducer block Pressure with calibration, 1 transducer block LCD |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Simulation function: pressure measurement, sensor temperature and electronics temperature | Constant value or by means of parameterizable ramp function |

## Dimensional drawings

1. Electronics side, local display (longer overall length for cover with glass pane)[1]
2. Connection side
3. Electrical connection:
   - M20 x 1.5[3] screw gland
   - ½-14 NPT screw gland
   - Han 7D/Han 8D[2][3] device plug
   - M12 device plug[2][3]
4. Harting adapter
5. Cover over buttons and nameplate with general information
6. Blanking plug
7. Safety catch (only for "flameproof enclosure" type of protection)
8. Process connection: G½B connection pin or oval flange
9. Mounting bracket (optional)

[1] In addition, allow approx. 22 mm (0.87 inch) for the thread length when removing the covers
[2] Not with "flameproof enclosure" type of protection
[3] Not with type of protection "FM + CSA" [is + XP]"

## Technical specifications (continued)

| Communication | |
|---|---|
| Cyclic data usage | |
| • Output byte | ≤ 35 (7 measured values) |
| • Input byte | 0, 1, or 2 (register operation mode and reset function for dosing) |
| Internal preprocessing | |
| Device profile | PROFIBUS PA Profile Version 4.01 Class B. Cyclic data usage compatible with version 3.XX |
| Number of function blocks | 7 |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| • Register (totalizer) | Can be reset, preset, optional direction of counting, simulation function of register output |
| - Limit monitoring | One upper and lower warning limit and one alarm limit respectively |
| • Physical block | 1 |
| Transducer blocks | 1 |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Specification of a vessel characteristic curve with | Max. 30 nodes |
| - Square-rooted characteristic curve for flow measurement | Yes |
| - Tank characteristic curve for volume measurement | Yes |

| Communication | |
|---|---|
| - Low flow cut-off and implementation point of square-root extraction | Parameterizable |
| - Simulation function for measured pressure value and sensor temperature | Constant value or by means of parameterizable ramp function |
| **FOUNDATION Fieldbus** | |
| Device profile | FF ITK 6 |
| Function blocks | 3 function blocks analog input, 1 function block PID |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input (can be locked within the device with a bridge) |
| - Failure mode | Parameterizable (last good value, substitute value, incorrect value) |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| - Square-rooted characteristic curve for flow measurement | Yes |
| • PID | Standard FOUNDATION Fieldbus function block |
| • Physical block | 1 resource block |
| Transducer blocks | 1 transducer block Pressure with calibration, 1 transducer block LCD |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Simulation function: pressure measurement, sensor temperature and electronics temperature | Constant value or by means of parameterizable ramp function |

## Dimensional drawings

1. Electronics side, local display (longer overall length for cover with glass pane)[1]
2. Connection side
3. Electrical connection:
   - M20 x 1,5[2] screw gland
   - ½-14 NPT screw gland
   - Han 7D/Han 8D[2][3] device plug
   - M12 device plug[2][3]
4. Harting adapter
5. Cover over buttons and nameplate with general information
6. Blanking plug
7. Safety catch (only for "flameproof enclosure" type of protection)
8. Lateral ventilation for liquid measurement (Standard)
9. Lateral ventilation for gas measurement (order option K85)
10. Mounting bracket (optional)
11. Sealing plug with valve (optional)
12. Process connection: ¼-18 NPT (IEC 61518)

[1] In addition, allow approx. 22 mm (0.87 inch) for the thread length when removing the covers
[2] Not with "flameproof enclosure" type of protection
[3] Not with type of protection "FM + CSA" [is + XP]"

## Technical specifications (continued)

| Communication | |
|---|---|
| - Simulation function | Output/input |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| • Register (totalizer) | Can be reset, preset, optional direction of counting, simulation function of register output |
| - Limit monitoring | One upper and lower warning limit and one alarm limit respectively |
| • Physical block | 1 |
| Transducer blocks | 1 |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Specification of a vessel characteristic curve with | Max. 30 nodes |
| - Square-rooted characteristic curve for flow measurement | Yes |
| - Tank characteristic curve for volume measurement | Yes |
| - Low flow cut-off and implementation point of square-root extraction | Parameterizable |
| - Simulation function for measured pressure value and sensor temperature | Constant value or by means of parameterizable ramp function |
| **FOUNDATION Fieldbus** | |
| Device profile | FF ITK 6 |
| Function blocks | 3 function blocks analog input, 1 function block PID |

| Communication | |
|---|---|
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input (can be locked within the device with a bridge) |
| - Failure mode | Parameterizable (last good value, substitute value, incorrect value) |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| - Square-rooted characteristic curve for flow measurement | Yes |
| • PID | Standard FOUNDATION Fieldbus function block |
| • Physical block | 1 resource block |
| Transducer blocks | 1 transducer block Pressure with calibration, 1 transducer block LCD |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Simulation function: pressure measurement, sensor temperature and electronics temperature | Constant value or by means of parameterizable ramp function |

## Technical specifications

| SITRANS P320 / SITRANS P420 for level | | | |
|---|---|---|---|
| **Input** | | | |
| Measured variable | Level | | |
| Measuring span (continuously adjustable) or measuring range and max. permissible operating pressure (pursuant to Pressure Equipment Directive 2014/68/EU) | Measuring span | Max. permissible operating pressure MAWP (PS) | Maximum permissible test pressure |
| | 25 ... 250 mbar<br>2.5 ... 25 kPa<br>10 ... 100.5 in$H_2O$ | See "Mounting flange" | |
| | 25 ... 600 mbar<br>2.5 ... 60 kPa<br>10 ... 241 in$H_2O$ | | |
| | 53 ... 1 600 mbar<br>5.3 ... 160 kPa<br>21 ... 643 in$H_2O$ | | |
| | 166 ... 5 000 mbar<br>16.6 ... 500 kPa<br>2.41 ... 72.5 psi | | |
| Measuring limits | | | |
| • Lower measuring limit | | | |
| - Measuring cell with silicone oil filling | -100% of max. measuring range or 30 mbar a/3 kPa a/0.44 psi a depending on the mounting flange | | |
| - Measuring cell with inert oil | -100% of max. measuring range or 30 mbar a/3 kPa a/0.44 psi a depending on the mounting flange | | |
| - Measuring cell with FDA-compliant oil | -100% of max. measuring range or 100 mbar a/10 kPa a/1.45 psi a | | |
| • Upper measuring limit | 100% of max. measuring span | | |
| • Lower range value | Between the measuring limits (continuously adjustable) | | |
| **Output** | **HART** | | |
| Output signal | 4 ... 20 mA | | |
| • Lower saturation limit (continuously adjustable) | 3.55 mA, factory set to 3.8 mA | | |
| • Upper saturation limit (continuously adjustable) | 22.8 mA, factory-set to 20.5 mA or optionally 22.0 mA | | |
| • Ripple (without HART communication) | $I_{pp} \leq 0.5\%$ of max. output current | | |
| Adjustable damping | 0 ... 100 s, continuously adjustable over remote operation<br>0 ... 100 s, in increments of 0.1 s, adjustable over display | | |
| • Current simulator | 3.55 ... 22.8 mA | | |
| • Failure signal | 3.55 ... 22.8 mA | | |
| Load | Resistance R [Ω] | | |
| • Without HART communication | $R = (U_H - 10.5\ V) / 22.8\ mA$,<br>$U_H$: Auxiliary power in V | | |
| • With HART communication | R = 230 ... 1100 Ω | | |
| Characteristic curve | • Linearly increasing or linearly decreasing<br>• Linear increase or decrease or according to the square root (only for differential pressure and flow) | | |
| Physical bus | - | | |
| Polarity-independent | - | | |
| **Measuring accuracy** | | | |
| Reference conditions | • According to IEC 62828-1<br>• Rising characteristic curve<br>• Lower range value 0 bar/kPa/psi<br>• Seal diaphragm stainless steel<br>• Measuring cell with silicone oil filling<br>• Room temperature 25 °C (77 °F) | | |
| Conformity error at limit point setting, including hysteresis and repeatability | | | |
| Measuring span ratio r (spread, Turn-Down) | r = maximum measuring span/set measuring span or nominal measuring range | | |
| • Linear characteristic curve | | | |
| | r ≤ 5: | ≤ 0.125% | |

## Technical specifications (continued)

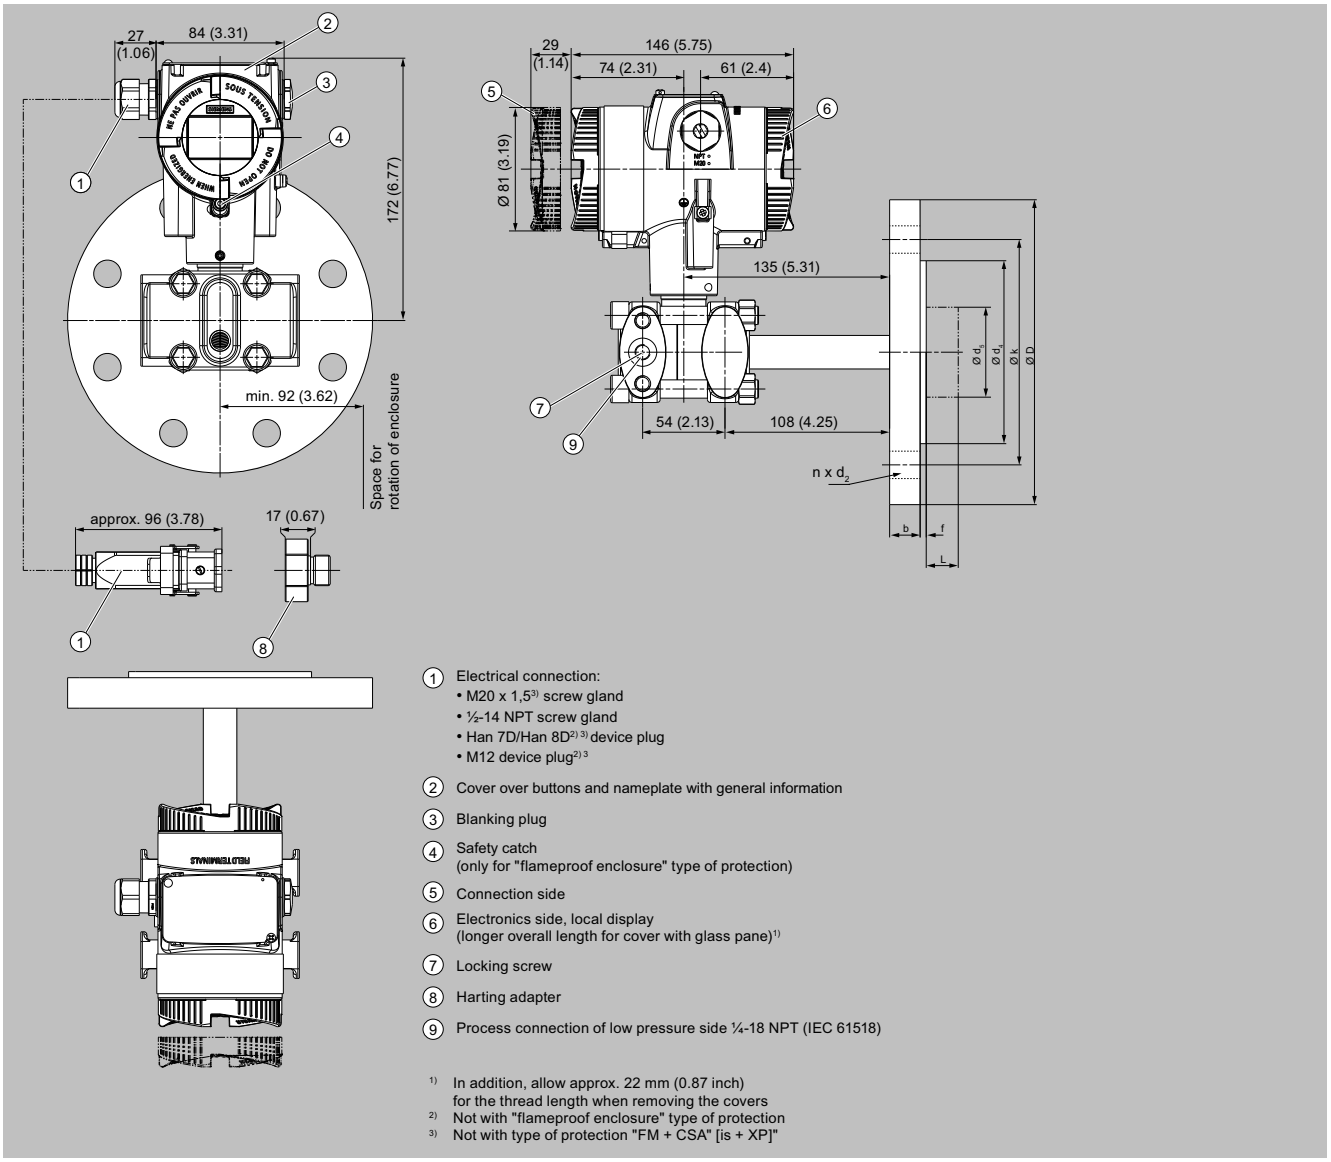
| Mounting flange | |
|---|---|
| Nominal diameter | Nominal pressure |
| • According to EN 1092-1 | |
| - DN 80 | PN 40 |
| - DN100 | PN 16, PN 40 |
| • According to ASME B16.5 | |
| - 3 inches | Class 150, Class 300 |
| - 4 inches | Class 150, Class 300 |



| Communication | |
|---|---|
| **HART** | |
| HART | 230 ... 1 100 Ω |
| Protocol | HART 7 |
| Software for computer | SIMATIC PDM |
| **PROFIBUS PA** | |
| Simultaneous communication with master class 2 (max.) | 4 |
| The address can be set using | Configuration tool or local operation (default setting address 126) |
| Cyclic data usage | |
| • Output byte | ≤ 35 (7 measured values) |
| • Input byte | 0, 1, or 2 (register operation mode and reset function for dosing) |
| Internal preprocessing | |
| Device profile | PROFIBUS PA Profile Version 4.01 Class B. Cyclic data usage compatible with version 3.XX |
| Number of function blocks | 7 |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| • Register (totalizer) | Can be reset, preset, optional direction of counting, simulation function of register output |
| - Limit monitoring | One upper and lower warning limit and one alarm limit respectively |
| • Physical block | 1 |
| Transducer blocks | 1 |

| Communication | |
|---|---|
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Specification of a vessel characteristic curve with | Max. 30 nodes |
| - Square-rooted characteristic curve for flow measurement | Yes |
| - Tank characteristic curve for volume measurement | Yes |
| - Low flow cut-off and implementation point of square-root extraction | Parameterizable |
| - Simulation function for measured pressure value and sensor temperature | Constant value or by means of parameterizable ramp function |
| **FOUNDATION Fieldbus** | |
| Device profile | FF ITK 6 |
| Function blocks | 3 function blocks analog input, 1 function block PID |
| • Analog input | |
| - Adaptation to user-specific process variable | Yes, linearly rising or falling characteristic curve |
| - Electrical damping adjustable | 0 ... 100 s |
| - Simulation function | Output/input (can be locked within the device with a bridge) |
| - Failure mode | Parameterizable (last good value, substitute value, incorrect value) |
| - Limit monitoring | Yes, one upper and lower warning limit and one alarm limit respectively |
| - Square-rooted characteristic curve for flow measurement | Yes |
| • PID | Standard FOUNDATION Fieldbus function block |
| • Physical block | 1 resource block |
| Transducer blocks | 1 transducer block Pressure with calibration, 1 transducer block LCD |
| • Pressure transducer block | |
| - Can be calibrated by applying two pressures | Yes |
| - Monitoring of sensor limits | Yes |
| - Simulation function: pressure measurement, sensor temperature and electronics temperature | Constant value or by means of parameterizable ramp function |

## More information

***Specification of process conditions for selection and ordering data***

Ambient temperature range

The standard remote seal systems are optimized for an ambient temperature range of -10 to +50 °C (14 to +122 °F). Therefore, in the ordering options, the **order code "D66" is** preset.

If the range of the ambient temperature deviates from this, you have the possibility to choose other ambient temperature ranges:

- With the **order code D67**, a range from -40 to +50 °C (-40 to +122 °F)
- With the **order code D68**, a range from -10 to +85 °C (14 to +185 °F)

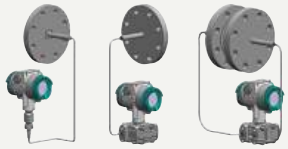
In the case of a **special design**, which you can select with the **order option Y99** in the device settings, it is possible to enter the ambient temperature as a numerical value.

Process temperature

The standard optimization for the process temperature depends on the filling liquid used:

| Filling liquid | Code | Optimized temperature range as standard |
|---|---|---|
| **Silicone M50** | B | -10 ... +200 °C (14 ... +392 °F) |
| **High-temperature oil** | C | -10 ... +300 °C (14 ... +572 °F) |
| **Silicone oil M5** | A | -40 ... +140 °C (-40 ... +284 °F) |
| **Food oil (FDA-listed)** | E | -10 ... +140 °C (14 ... +284 °F) |
| **Halocarbon oil** | D | -20 ... +60 °C (-4 ... +140 °F) |
| **Neobee M20 (FDA-listed)** | R | -10 ... +140 °C (14 ... +284 °F) |

- **If the process temperatures** deviate from the temperature ranges mentioned in the table above, we ask you to send the process temperature with the **order code Y50** along with the order.
- If the remote seal has a small diameter (< DN 50/2") or a long capillary (> 4 m), we also ask you to provide the process data with the **following order code** when ordering.



These entries are transmitted and ensure the correct functioning of the remote seal systems.

| | Order code |
|---|---|
| **Ambient temperature range** | |
| • -10 ... +50 °C (14 ... +122 °F) preset | **D66** |
| • -40 ... +50 °C (-40 ... +122 °F) | **D67** |
| • -10 ... +85 °C (14 ... +185 °F) | **D68** |
| **Process temperature min. ... °C/(°F)/max. ... °C/(°F)** | **Y50** |

## Overview

In many cases, the pressure transmitter and the measured medium have to be physically separated. It is then necessary to use a remote seal.

The remote seals can be used with the following SITRANS P320/420 pressure transmitter series:

- Gauge pressure
- Absolute pressure
- Differential pressure and flow

***Note***

When configuring your remote seal, be sure to read the information about transmission response, temperature error and response time to be found in the sections "Function" and "Technical specification". Only then will the remote seal work to optimum effect.

## Benefits

- No direct contact between pressure transmitter and medium
- Individual configuration of the pressure transmitter for perfect adaptation to the operating conditions
- Available in many versions
- Specially designed for difficult operating conditions
- Quick-release versions available for the food industry

## Application

Remote seal systems should be used when it is necessary or expedient to separate the medium and measuring instrument.

Some examples of such cases:

- The medium temperature is outside the limits specified for the pressure transmitter.
- The medium is corrosive and requires diaphragm materials that are not available for the pressure transmitter.
- The medium is highly viscous or has a high solids content and would block the sample chambers of the pressure transmitter.
- The medium could freeze in the sample chambers or the pulse cable.
- The medium is heterogeneous or fibrous.
- The medium has a tendency towards polymerization or crystallization.
- The process requires quick-release remote seals, as required in the food & beverages industry for fast cleaning, for example.
- The process requires cleaning of the measuring point, like in a batch process, for example.

## Design

A remote seal system consists of the following components.

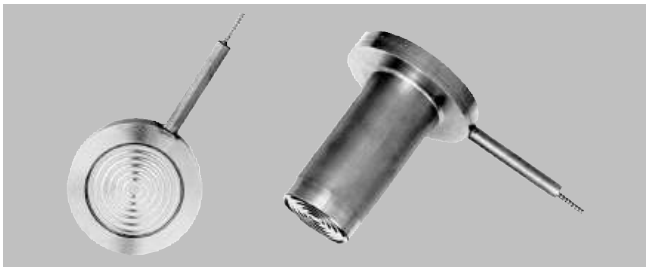
- Pressure transmitter
- One or two remote seals
- Filling liquid
- Connection between the pressure transmitter and remote seal (direct mounting or via a capillary)

The space for the medium is sealed off with a flat embedded elastic diaphragm. Between the diaphragm and the pressure transmitter is the filling liquid.

In many cases, a capillary must be connected between the remote seal and the pressure transmitter in order, for example, to reduce the temperature effects on the pressure transmitter when the measured medium is hot.

However, the capillary influences the response time and the temperature response of the overall remote seal system. When capillaries are used to connect a remote seal to a pressure transmitter for differential pressure, two capillaries of equal length must always be used.

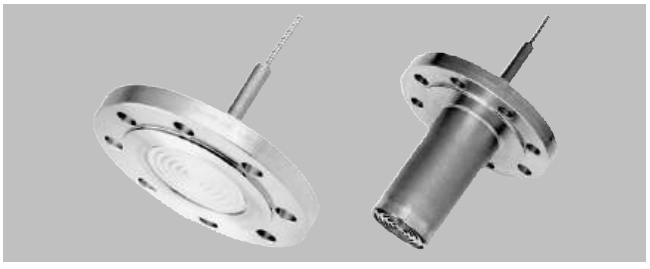
Optionally, the remote seal with diaphragm extension (tube) can be ordered.



The remote seals in sandwich design are secured with a blank flange.

***Designs***

Diaphragm seal



With diaphragm seals, the pressure is sensed by a flat embedded diaphragm.

Diaphragm seals are differentiated as follows:

Diaphragm seal in sandwich design without (left) and with diaphragm extension (tube)

- Sandwich design
- Sandwich design with diaphragm extension (tube) according to EN or ASME and secured with a blank flange

Diaphragm seal in flange design without (left) and with diaphragm extension (tube)

- Flange design

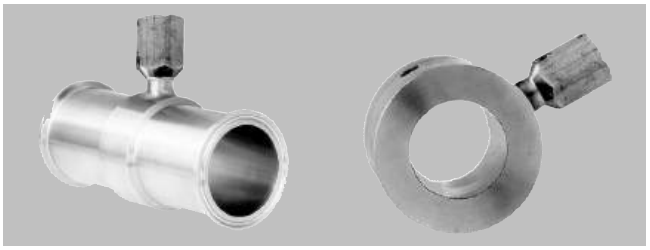
© Siemens AG 2024

## Design (continued)

- Flange design with diaphragm extension (tube) according to EN or ASME and secured using holes on the flange

Quick-release diaphragm seal

- Remote seal with quick release, e.g., according to DIN 11851, SMS Standard, IDF Standard, APV-RJF Standard, clamp connection, etc.
- Miniature remote seal with male thread for screwing into threaded holes
- Remote seal with customer-specific process connections



Miniature diaphragm seal with flush-mounted diaphragm

- Miniature diaphragm seal

Remote seals with quick release are used mainly in the food industry. Their design means that the medium cannot accumulate in dead volumes. The remote seal's quick release mechanism enables fast disassembly for cleaning.

Inline seal

Quick-release inline seal (left) and for flange mounting

With inline seals, the pressure is sensed using a cylindrical diaphragm inside the pipe and then transmitted with the filling liquid to the pressure transmitter.

## Design (continued)

The inline seal is a special design for flowing media. It consists of a cylindrical pipe in which a cylindrical diaphragm is embedded. Because it is completely integrated in the process line, there are no turbulences, dead spaces or other obstacles in the flow direction. The inline seal is also piggable.

Inline seals are differentiated as follows:

- Quick-release inline seal, e.g., according to DIN 11851, SMS Standard, IDF Standard, APV/RJF Standard, clamp connection, etc. The remote seal's quick release mechanism enables fast disassembly for cleaning.
- Inline seal for flange mounting according to EN or ASME
- Inline seal with customer-specific process connections

***Note:***

The pressure information on the transmitter and the remote seal must be observed in accordance with the pressure-temperature relationship.

© Siemens AG 2024

## Function

The measured pressure is transferred to the filling liquid by the diaphragm and enters the measuring chamber of the pressure transmitter through the capillary. The filling liquid completely fills the inside of the diaphragm seal, the capillary and the measuring chamber of the pressure transmitter so that it is free of gas.

***Transmission response***

The transmission response of a remote seal is characterized by the following variables:

- Temperature error
- Adjustment time

Temperature error

Temperature errors are caused by changes in the volume of the filling liquid as a result of temperature fluctuations. To select the right remote seal, you must calculate the temperature error.

Below is an overview of the factors which affect the extent of the temperature error, and information on how to calculate the temperature error.

The temperature error depends on the following variables:

- Rigidity of the diaphragm used
- Filling liquid used
- Effect of the filling liquid underneath the process flanges or in the connection shank of the pressure transmitter
- Inside diameter of the capillary: The greater the inside diameter, the greater the temperature error
- Capillary length: The longer the capillary, the greater the temperature error

Diaphragm rigidity

The rigidity of the diaphragm is extremely important. The greater the diameter of the diaphragm, the softer the diaphragm and the more sensitive it is to temperature-induced changes in the volume of the filling liquid.

Large-diameter diaphragms are therefore always required for small measuring ranges.

Apart from diaphragm rigidity, the following factors are also important:

- Diaphragm thickness
- Diaphragm material
- Any coatings

Filling liquid

Temperature fluctuations cause volume changes in all filling liquids. Choosing the right filling liquid can minimize the temperature error; however, the filling liquid must be appropriate for the temperature limits and operating pressure. The filling liquid must also be harmless to health.

There is filling liquid underneath the diaphragm, in the capillary and under the process flange of the pressure transmitter (or in the connection shank). The temperature error must therefore be calculated separately for each combination.

**Note**:

A vacuum-resistant remote seal is recommended for continuous negative pressure operation at 500 mbar a or below, including during commissioning (see ordering data).

You can find an example of how to calculate the temperature error in "Technical specifications".

Adjustment time

The adjustment time depends on the following factors:

- Inside diameter of the capillary: The greater the inside diameter, the shorter the adjustment time.
- Filling liquid viscosity: The greater the viscosity, the longer the adjustment time.
- Capillary length: The longer the capillary, the longer the adjustment time.
- Pressure in the pressure measurement system: The higher the pressure, the shorter the adjustment time.

***Recommendations***

For the best possible pressure transmitter and remote seal combination, please note the following:

- Use a diameter as large as possible for the remote seal. This makes the effective diameter of the remote seal diaphragms larger and reduces the temperature error.
- Use a capillary as short as possible. This reduces the adjustment time and the temperature error.
- Use the filling liquid with the lowest viscosity and smallest coefficients of expansion. Make sure, however, that the filling liquid meets the high-pressure, low-pressure and temperature process requirements. The filling liquid and the medium must also be compatible.
- Please note the following points for operation in the negative pressure range:
  - The pressure transmitter must always be positioned below the lowest shank.
  - The operating range of some filling liquids may be extremely limited in terms of the permissible temperature of the medium.
  - A vacuum-resistant remote seal is required for continuous operation in the low-pressure range.
- You can find recommendations for the minimum measuring span in "Technical specifications".

***Note***

The remote seals listed here are merely a selection of the most common remote seals. As there is a wide range of process connections, this list may not include all remote seals available.

Other versions may include:

- Different process connections and standards
- Aseptic or sterile screw glands
- Different dimensions
- Different nominal pressures
- Special diaphragm materials and coatings
- Different sealing surfaces
- Different filling liquids
- Different capillary lengths
- Capillary sheathed in protective tubing
- Calibration at higher/lower temperatures, etc.

***Please contact your local Siemens office for further information.***

***Negative pressure service***

Filling liquids, such as silicone oils, inert or those suitable for food, are used in remote seal systems for transmission of the process pressure to the pressure transmitter.

© Siemens AG 2024

## Function (continued)

In each liquid, particles have the tendency to leave the liquid compound with increasing temperature (transition from liquid to gaseous aggregate state). This means the vapor pressure increases with increasing temperature and is dependent on the substance or mixture present.

The higher the temperature and the lower the associated process pressure in the liquid, the more difficult it is to guarantee the desired transmission properties of the remote seal's filling liquid and therefore the measuring arrangement.

In addition, the sealing elements at the transmitter must be designed so that a diffusion of molecules from the atmosphere into the remote seal system is prevented due to the constantly occurring negative pressure.

In addition to the influencing variables process pressure and process temperature, the vapor pressure curve of the filling liquid at the remote seal end and the stiffness of the remote seal membrane impact the functionality of the remote seal in the negative pressure range.

This means you have to pay special attention to the physical properties of filling liquids with applications in the negative pressure range.

There are three stages for the negative pressure resistance:

- **Standard version** of the remote seal without additional protective measures, suitable for the overpressure range and low negative pressure range. This design is identified with (1) in the diagrams below.
- **Negative pressure service** with suitable seals and treated filling liquid, identified with (2) in the diagrams below. Here you select the order codes D81 or D83, depending on the mounting type.
- **Extended negative pressure service** with more extended treatment of the filling liquid and the remote seals, identified in the diagrams below with (3). Here you select the order codes D85 or D88, depending on the mounting type.

There are two more areas in the charts. The area (4) identifies an area that has to be clarified with Technical Support prior to placing the order. The area (5) describes the area in which the remote seal filling liquid is permanently destroyed and the entire remote seal is therefore without function.

Technical specifications of the remote seal filling liquids

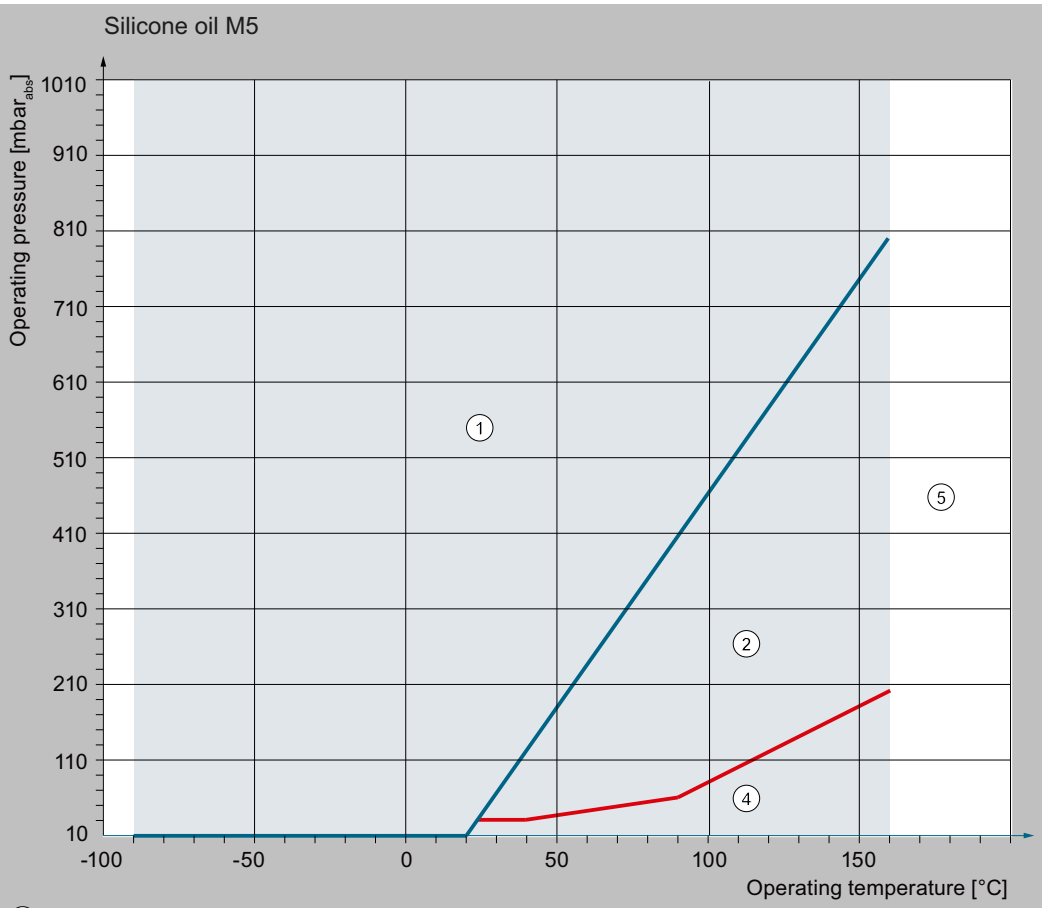
| Filling liquid | Reference in the article no. | Density at 20 °C (68 °F) [kg/dm³] | Viscosity at 20 °C (68 °F) [mm²/s] | Suitable for negative pressure service | Suitable for extended negative pressure service |
|---|---|---|---|---|---|
| Silicone oil M5 | A | 0.914 | 4 | x | - |
| Silicone oil M50 | B | 0.966 | 50 | x | x |
| High-temperature oil | C | 1.079 | 57 | x | x |
| Halocarbon oil | D | 1.968 | 14 | x | - |
| Food oil (FDA-listed) | E | 0.920 | 10 | x | x |
| Neobee M20 | R | 0.921 | 10 | x | x |

The suitable negative pressure service is specified with the pressure/temperature curves of the respective liquids described below.

**Note:** For reasons of operational safety, the transmitter must not exceed the height of the remote seal - with differential pressure applications, the height of the bottom remote seal - for measurements in the negative pressure range. The associated mounting types B, C1, C2 or H are described at the end of this section under the topic "Measuring arrangements".

***Selection of the required negative pressure service***

The procedure for determining the required negative pressure service is described below using the silicone oil M5 as filling liquid. The minimum existing process pressure of a fictitious process is 200 $mbar_{abs}$ (2.9 psi) (at a maximum process temperature of 150 °C (302 °F). This intersection is identified by an "X" in the chart below. This means the negative pressure service D81 or D83 (depending on the application) is sufficient in this example.



The suitable negative pressure resistance is determined this way for all other filling liquids also.

***Note:***
***Note the response times according to the table "Response times" (see Technical specifications).***

(2) Operating range for which the **negative pressure service D81 or D83** is required.

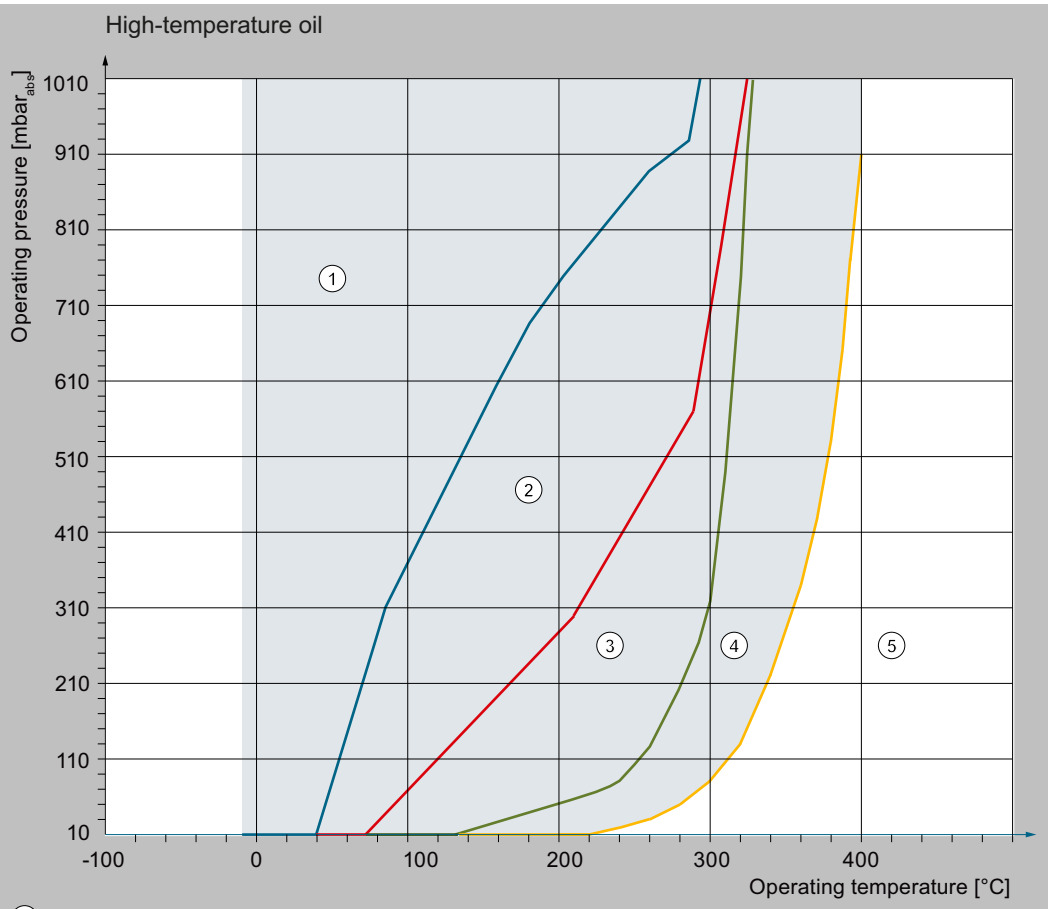
(3) Operating range for which the **extended negative pressure service D85 or D88** is required

(4) Please contact Technical Support for applications in this area.
Detailed information regarding application, process and ambient data are necessary.

(5) Area in which you have to expect the destruction of the fill fluid.
A function of the remote seal is not specified here.



Permissible operating range:
Max. temperature limit: 230 °C
Min. temperature limit: -15 °C

Negative pressure applications with food oil (FDA-listed)

© Siemens AG 2024

## Function (continued)

(1) Operating range of the standard remote seal design without special measures.

(2) Operating range for which the **negative pressure service D81 or D83** is required.

(3) Operating range for which the **extended negative pressure service D85 or D88** is required

(4) Please contact Technical Support for applications in this area.
Detailed information regarding application, process and ambient data are necessary.

(5) Area in which you have to expect the destruction of the fill fluid.
A function of the remote seal is not specified here.

Permissible operating range:
Max. temperature limit: 260 °C
Min. temperature limit: -35 °C

Negative pressure applications with Neobee M20 (FDA-listed)

## Technical specifications

***Diaphragm seal temperature error***

Temperature errors of diaphragm seals when connected to pressure transmitters for gauge pressure, absolute pressure, differential pressure (single-sided) and level

Notes

Table values apply to:

- The filling liquids silicone oil M5, silicone oil M50, high-temperature oil, halocarbon oil and food oil (FDA listed), Neobee M20
- Diaphragm material stainless steel

With selected order code W01:

- The values listed in the table for "High-temperature oil" filling liquid and for the wetted parts made of stainless steel 316L, mat no. 1.4404/1.4435, apply.
- For the other filling liquids, the following supplements must be applied to the determined table values for the temperature errors[1]:
  - For "FDA oil": 5%
  - For "Silicone oil M5": 35%
  - For "Silicone oil M50": 35%
  - For "Halocarbon oil": 20%
  - For "Neobee M20": 20%

[1] The specified surcharges for the various wetted parts are unaffected. They still need to be included in the calculation.

## Technical specifications (continued)

***Temperature errors of diaphragm seals with connection to differential pressure transmitters (double-sided)***

Notes

Table values apply to:

- The filling liquids silicone oil M5, silicone oil M50, high-temperature oil, halocarbon oil and food oil (FDA listed), Neobee M20
- Diaphragm material stainless steel

With selected order code W01:

- The values listed in the table for "High-temperature oil" filling liquid and for the wetted parts made of stainless steel 316L, mat no. 1.4404/1.4435, apply.
- For the other filling liquids, the following supplements must be applied to the determined table values for the temperature errors[1]:
  - For "FDA oil": 5%
  - For "Silicone oil M5": 35%
  - For "Silicone oil M50": 35%
  - For "Halocarbon oil": 20%
  - For "Neobee M20": 20%

1) The specified surcharges for the various wetted parts are unaffected. They still need to be included in the calculation.

## Technical specifications (continued)

### *Calculation of the temperature error*

The following equation is used to calculate the temperature error:

$dp = (\vartheta_{RS} - \vartheta_{Cal}) \cdot f_{RS} + (\vartheta_{Cap} - \vartheta_{Cal}) \cdot l_{Cap} \cdot f_{Cap} + (\vartheta_{MU} - \vartheta_{Cal}) \cdot f_{PF}$

| Legend: | |
|---|---|
| dp | Additional temperature error (mbar) |
| $\vartheta_{RS}$ | Temperature on remote seal diaphragm (generally corresponds to temperature of medium) |
| $\vartheta_{Cal}$ | Calibration/reference temperature (20 °C (68 °F)) |
| $f_{DM}$ | Temperature error of remote seal |
| $\vartheta_{Cap}$ | Ambient temperature on the capillaries |
| $l_{Cap}$ | Capillary length |
| $f_{Cap}$ | Temperature error of capillaries |
| $\vartheta_{TR}$ | Ambient temperature on pressure transmitter |
| $f_{PF}$ | Temperature error of the oil filling in the process flanges of the pressure transmitter |

### *Example of temperature error calculation*

What are you looking for?

We are looking for an additional temperature error of the remote seals (**dp**).

Prevailing values:

| | |
|---|---|
| SITRANS P pressure transmitter for differential pressure, 250 mbar, set to 0 ... 100 mbar, with DN 100 diaphragm seals without tube, diaphragm made of stainless steel, mat. no. 1.4404/316L | $f_{DM}$ = 0.05 mbar/10 K (0.039 $inH_2O$/10 K) |
| Capillary length | $l_{Cap}$ = 6 m (19.7 ft) |
| Capillaries fitted on both sides | $f_{Cap}$ = 0.07 mbar/(10 K · $m_{Cap}$) 0.028 $inH_2O$/(10 K · $m_{Cap}$) |
| Filling liquid silicone oil M5 | $f_{PF}$ = 0.07 mbar/10 K (0.028 $inH_2O$/10 K) |
| Medium temperature | ***$\vartheta_{DM}$ = 100 °C (212 °F)*** |
| Temperature on the capillaries | ***$\vartheta_{Cap}$ = 50 °C (122 °F)*** |
| Temperature on pressure transmitter | ***$\vartheta_{MU}$ = 50 °C (122 °F)*** |
| Calibration temperature | ***$\vartheta_{Cal}$ = 20 °C (68 °F)*** |

Calculation in mbar:

dp = (100 °C – 20 °C) · 0.05 mbar/10 K + (50 °C – 20 °C) · 6 m · 0.07 mbar/(10 K · m) + (50 °C – 20 °C) · 0.07 mbar/10 K

Calculation in $inH_2O$:

dp = (212 °F – 68 °F) · 0.039 $inH_2O$/10 K + (112 °F – 68 °F) · 19.7 ft · 0.028 $inH_2O$/(10 K · 3.28 ft) + (112 °F – 68 °F) · (0.028 $inH_2O$/10 K)

dp = 0.16 $inH_2O$ + 0.51 $inH_2O$ + 0.08 $inH_2O$

Result:

***dp = 1.87 mbar (0.75 $inH_2O$)***

(corresponds to 2.27% of set measuring span)

Note:

The determined temperature error only applies to the error resulting from connection of the remote seal.

The transmission response of the respective pressure transmitter is not taken into account here!
The transmission response must be calculated separately, and the resulting measuring error added to the temperature error determined above from connection of the remote seal.

### *Dependence of temperature error on diaphragm material*

The temperature errors listed in the previous table are based on the use of stainless steel as the diaphragm material. If other diaphragm materials are used, the temperature errors change as follows:

| Diaphragm material | Change in temperature error of remote seal |
|---|---|
| | ***Increase in values by:*** |
| Stainless steel, duplex, ... | See previous tables |
| Hastelloy C4, mat. no. 2.4610 | 50% |
| Hastelloy C276, mat. no. 2.4819 | 50% |
| Monel 400, mat. no. 2.4360 | 60% |
| Tantalum | 50% |
| Titanium | 50% |
| PTFE coating on stainless steel diaphragm | 80% |
| ECTFE coating or PFA coating on stainless steel diaphragm | 100% |
| Gold coating on stainless steel diaphragm | 40% |
| Inconel | 50% |
| Incoloy | 50% |

### *Maximum medium temperature*

Note

When taking into account the maximum medium temperature, the application limits of the filling liquids and gaskets used as well as the pressure/temperature limits of the respective process connections must also be taken into consideration.

The following maximum medium temperatures apply depending on the material of wetted parts.

| Material | Max. medium temperature | Min./max. Pressure |
|---|---|---|
| **Stainless steel, mat. no. 1.4404/316L** | 400 °C (752 °F) | No restrictions |
| **PTFE coating** | 200 °C (392 °F) | < 0 bar (0 psi); gauge pressure |
| | 260 °C (500 °F) | 0 bar (0 psi) ... 25 bar (363 psi); gauge pressure |
| | 150 °C (302 °F) | 25 bar (363 psi) ... 40 bar (580 psi); gauge pressure |
| | 50 °C (302 °F) | 40 bar (580 psi) ... 60 bar (870 psi); gauge pressure |
| **ECTFE coating** | 150 °C (302 °F) | For pressures < 1 bar (14.5 psi) on request |
| **PFA coating** | 200 °C (392 °F) | < 0 bar (0 psi); gauge pressure |
| | 260 °C (500 °F) | 0 bar (0 psi) ... 25 bar (363 psi); gauge pressure |
| | 150 °C (302 °F) | 25 bar (363 psi) ... 40 bar (580 psi); gauge pressure |
| | 50 °C (302 °F) | 40 bar (580 psi) ... 100 bar (1450 psi); gauge pressure |

| DN 125 | (5") | 15 | (49.1) | - | - | - | - | - | - |

***Response times***

The response times specified in the following table (in seconds per meter length of the capillary) apply to a change in pressure which corresponds to the set measuring span.

The listed values must be multiplied by the respective length of the capillary, or with pressure transmitters for differential pressure and flow by the total length of both capillaries.

The response times are independent of the set measuring span within the range of the respective pressure transmitter. The response times are of insignificant importance for measuring spans above 10 bar (145 psi). The response times of the pressure transmitters are not considered in the table.

| Filling liquid | Density | | Temperature on capillary | | Response time in s/m (s/ft) with max. measuring span of pressure transmitter | | | | | |

## More information

***Specification of process conditions for selection and ordering data***

Ambient temperature range

The standard remote seal systems are optimized for an ambient temperature range of -10 to +50 °C (14 to +122 °F). Therefore, in the ordering options, the **order code "D66" is** preset.

If the range of the ambient temperature deviates from this, you have the possibility to choose other ambient temperature ranges:

- With the **order code D67**, a range from -40 to +50 °C (-40 to +122 °F)
- With the **order code D68**, a range from -10 to +85 °C (14 to +185 °F)

In the case of a **special design**, which you can select with the **order option Y99** in the device settings, it is possible to enter the ambient temperature as a numerical value.

Process temperature

The standard optimization for the process temperature depends on the filling liquid used:

| Filling liquid | Code | Optimized temperature range as standard |
|---|---|---|
| **Silicone M50** | B | -10 ... +200 °C (14 ... +392 °F) |
| **High-temperature oil** | C | -10 ... +300 °C (14 ... +572 °F) |
| **Silicone oil M5** | A | -40 ... +140 °C (-40 ... +284 °F) |
| **Food oil (FDA-listed)** | E | -10 ... +140 °C (14 ... +284 °F) |
| **Halocarbon oil** | D | -20 ... +60 °C (-4 ... +140 °F) |
| **Neobee M20 (FDA-listed)** | R | -10 ... +140 °C (14 ... +284 °F) |

- **If the process temperatures** deviate from the temperature ranges mentioned in the table above, we ask you to send the process temperature with the **order code Y50** along with the order.
- If the remote seal has a small diameter (< DN 50/2") or a long capillary (> 4 m), we also ask you to provide the process data with the **following order code** when ordering.

These entries are transmitted and ensure the correct functioning of the remote seal systems.

| | Order code |
|---|---|
| **Ambient temperature range** | |
| • -10 ... +50 °C (14 ... +122 °F) preset | **D66** |
| • -40 ... +50 °C (-40 ... +122 °F) | **D67** |
| • -10 ... +85 °C (14 ... +185 °F) | **D68** |
| **Process temperature min. ... °C/(°F)/max. ... °C/(°F)** | **Y50** |

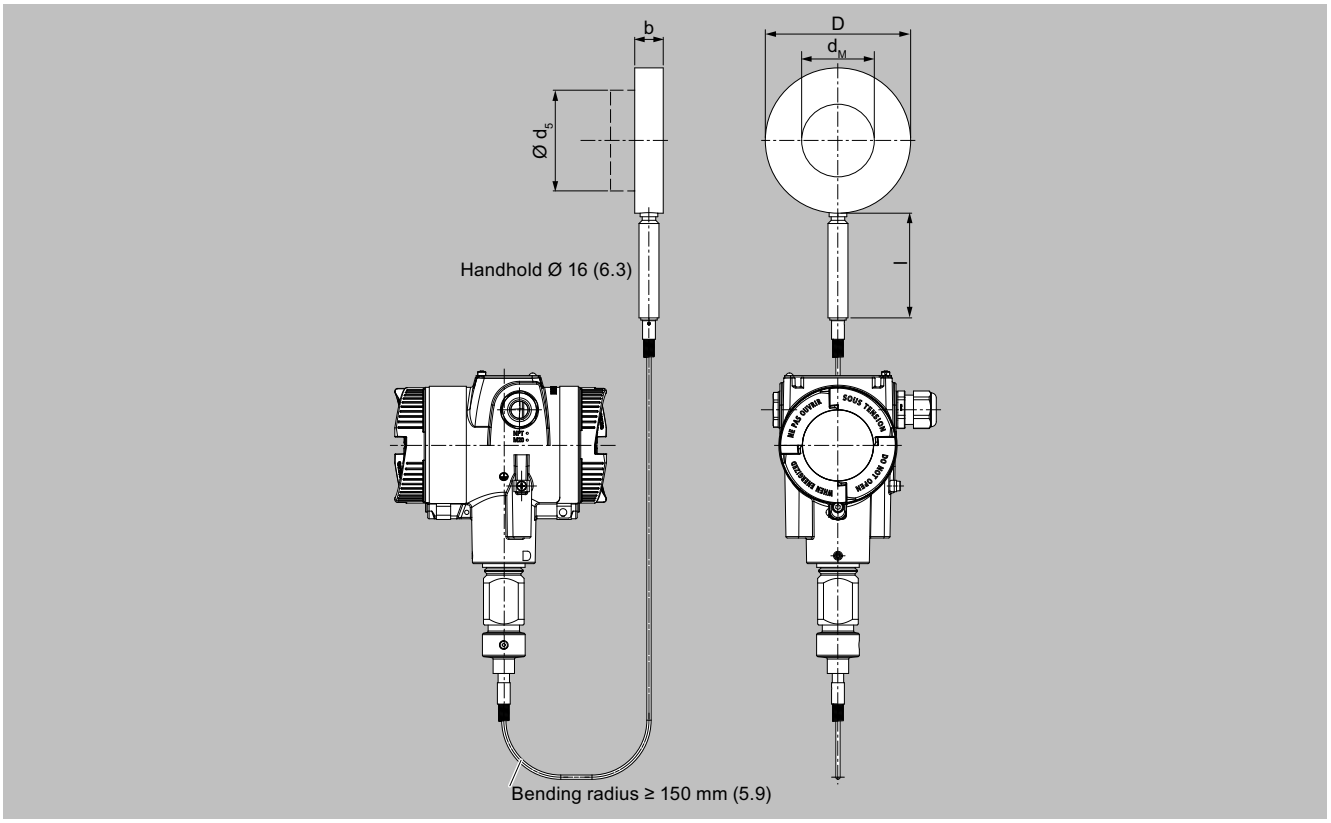
## Technical specifications

| SITRANS P320/P420 diaphragm seals in sandwich design with flexible capillary | |
|---|---|
| **Nominal diameter** | **Nominal pressure** |
| Standard of process connection EN 1092-1 | |
| • DN 25, DN 40, DN 50, DN 65, DN 80, DN 100, DN 125 | PN 16 ... PN 400 |
| Standard of process connection ASME B16.5 | |
| • 1 inch, 1½ inch, 2 inch, 2½ inch, 3 inch, 4 inch, 5 inch | Class 150 ... Class 2500 |
| Process connection standard J.I.S. | |
| • DN 25, DN 40, DN 50, DN 65, DN 80, DN 100, DN 125 | 10K ... 63K |
| **Sealing surface** | |
| • For stainless steel mat. no. 1.4404/316L | According to EN 1092-1, form B1 or ASME B16.5 RF 125 ... 250 AA |
| • For the other materials | According to EN 1092-1, form B2 or ASME B16.5 RFSF |
| **Materials** | |
| • Main body | Stainless steel, mat. no. 1.4404/316L |
| • Wetted parts | Stainless steel, mat. no. 1.4404/316L<br>• Without coating<br>• PTFE coating<br>• ECTFE coating (for negative pressure on request)<br>• PFA coating<br>Monel 400, mat. no. 2.4360<br>Hastelloy C276, mat. no. 2.4819<br>Hastelloy C4, mat. no. 2.4610<br>Hastelloy C22, mat. no. 2.4602<br>Tantalum<br>Titanium, mat. no. 3.7035<br>Nickel 201<br>Duplex 2205, mat. no. 1.4462<br>Stainless steel 316L, gold plated, layer thickness approx. 25 µm |
| • Capillary | Stainless steel, mat. no. 1.4571/316Ti (with options W01 and E50 ... E58) or mat. no. 1.4301/304 |
| • Sheath | Flexible spiral coiled tube made of stainless steel, mat. no. 1.4404/316L |
| **Gasket material in the process flanges** | |
| • For gauge pressure transmitters, absolute pressure transmitters and negative pressure applications | Copper |
| • For other applications | Viton |
| **Permissible pressure load** | See above and the technical specifications of the pressure transmitters |
| **Tube length** | Without tube as standard.<br>A custom tube length can be selected as an order code. |
| **Capillary** | |
| • Length | ≤ 10 m (32.8 ft), longer lengths on request |
| • Inside diameter | ≤ 1.3 mm (0.051 inch) |
| • Minimum bending radius | 150 mm (5.9 inches) |
| **Filling liquid** | • Silicone oil M5<br>• Silicone oil M50<br>• High-temperature oil<br>• Halocarbon oil (for measuring $O_2$)<br>• Food oil (FDA-listed)<br>• Neobee M20 (FDA-listed) |



## Technical specifications (continued)

| SITRANS P320/P420 diaphragm seals in sandwich design with flexible capillary | |
|---|---|
| **Permissible ambient temperature** | Dependent on the pressure transmitter and the filling liquid of the remote seal.<br>**More information**<br>In the technical specifications of the pressure transmitters and in the sections in the technical reference of the remote seals:<br>• "Function" - "Technical specifications of the remote seal filling liquids"<br>• "More information" - "Specification of process conditions for selection and ordering data" |
| **Weight** | Approx. 4 kg (8.82 lbs) |
| **Certificates and approvals** | |
| Classification according to pressure equipment directive (PED 2014/68/EU) | For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice) |

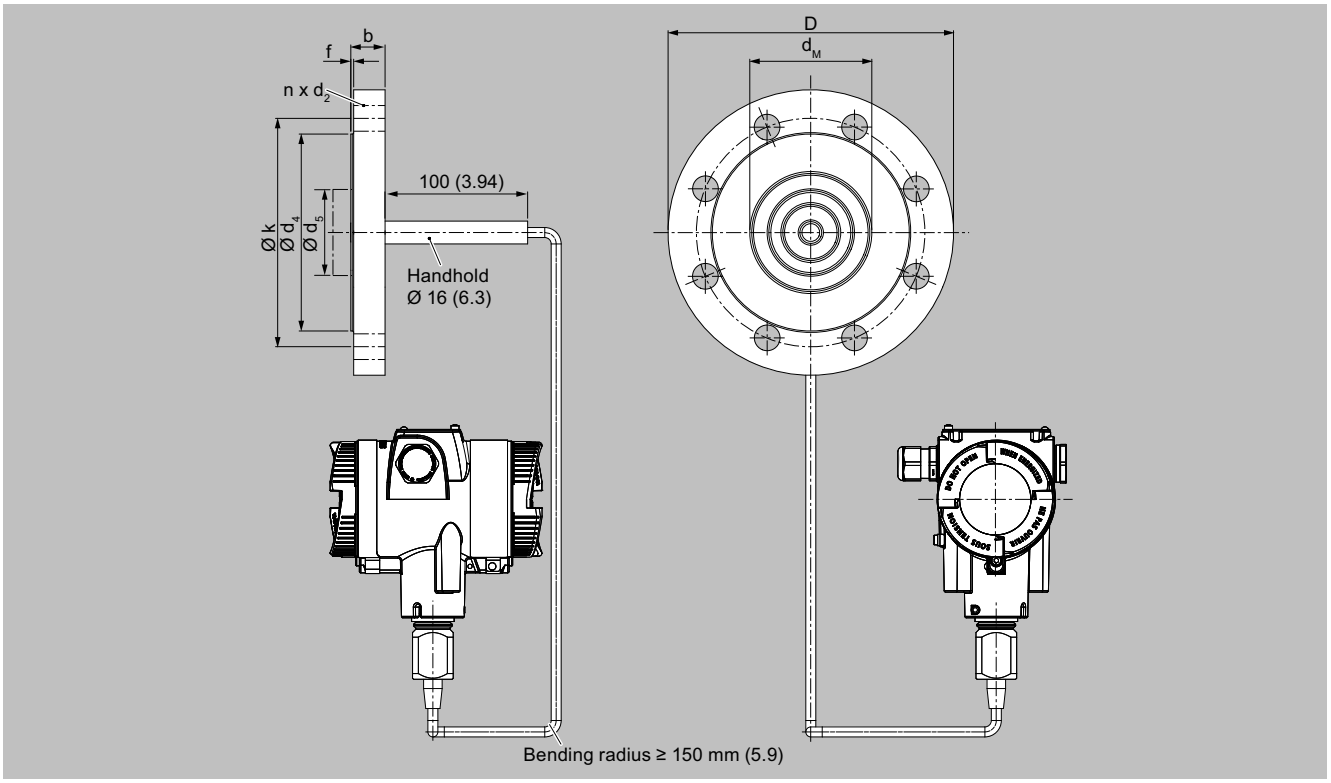
## Technical specifications

| SITRANS P320/P420 diaphragm seals in flange design with flexible capillary | |
|---|---|
| **Nominal diameter** | **Nominal pressure** |
| Standard of process connection EN 1092-1 | |
| • DN 25 | PN 10/16/25/40/63/100/160/250 |
| • DN 40 | PN 10/16/25/40/63/100/160 |
| • DN 50 | PN 10/16/25/40/63/100 |
| • DN 80 | PN 10/16/25/40/100 |
| • DN 100 | PN 10/16/25/40 |
| • DN 125 | PN 16/40 |
| Process connection standard ASME B16.5 | |
| • 1 inch | Class 150/300/600/1500 |
| • 1½ inches | Class 150/300/400/600/900/1500 |
| • 2 inches | Class 150/300/400/600/900/1500 |
| • 3 inches | Class 150/300/600/1500 |
| • 4 inches | Class 150/300/400/1500 |
| • 5 inches | Class 150/300/400 |
| Process connection standard J.I.S. | |
| • DN 50 | 10K |
| • DN 80 | 20K |
| • DN 100 | 40K |
| **Sealing surface** | |
| • For stainless steel mat. no. 1.4404/316L | According to EN 1092-1, form B1 or ASMR B16.5 RF 125 ... 250 AO |
| • For other materials | According to EN 1092-1, form B2 or ASME B16.5 RFSF |
| **Materials** | |
| • Main body | Stainless steel, mat. no. 1.4404/316L |
| • Wetted parts | Stainless steel, mat. no. 1.4404/316L<br>• Without coating<br>• PTFE coating<br>• ECTFE coating (for negative pressure on request)<br>• PFA coating<br>Monel 400, mat. no. 2.4360<br>Hastelloy C276, mat. no. 2.4819<br>Hastelloy C4, mat. no. 2.4610<br>Hastelloy C22, mat. no. 2.4602<br>Tantalum<br>Titanium, mat. no. 3.7035<br>Nickel 201<br>Duplex 2205, mat. no. 1.4462<br>Stainless steel 316L, gold plated, layer thickness approx. 25 µm |
| • Capillary | Stainless steel, mat. no. 1.4571/316Ti (with options W01 and E50 to E58) or mat. no. 1.4301/304 |
| • Sheath | Flexible spiral coiled tube made of stainless steel mat. no. 1.4404/316L |
| **Gasket material in the process flanges** | |
| • For pressure transmitters, absolute pressure transmitters and negative pressure applications | Copper |
| • For other applications | Viton |
| **Permissible pressure load** | See above and the technical specifications of the pressure transmitter |
| **Tube length** | Without tube as standard.<br>A custom tube length can be selected as an order code. |



## Technical specifications (continued)

| SITRANS P320/P420 diaphragm seals in flange design with flexible capillary | |
|---|---|
| **Capillary** | |
| • Length | ≤ 10 m (32.8 ft), longer lengths on request |
| • Inside diameter | ≤ 1.3 mm (0.051 inch) |
| • Minimum bending radius | 150 mm (5.9 inches) |
| **Filling liquid**<br>(for remote seals of sandwich and flange type) | • Silicone oil M5<br>• Silicone oil M50<br>• High-temperature oil<br>• Halocarbon oil (for measuring $O_2$)<br>• Food oil (FDA-listed)<br>• Neobee M20 (FDA-listed) |
| **Permissible ambient temperature** | Dependent on the pressure transmitter and the filling liquid of the remote seal.<br>**More information**<br>In the technical specifications of the pressure transmitters and in the sections in the technical reference of the remote seals:<br>• "Function" - "Technical specifications of the remote seal filling liquids"<br>• "More information" - "Specification of process conditions for selection and ordering data" |
| **Weight** | Approx. 4 kg (8.82 lb) |
| **Certificates and approvals** | |
| Classification according to pressure equipment directive (PED 2014/68/EU) | For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice) |

## Overview

Quick-release diaphragm seals, acc. to DIN 11851 with slotted union nut

Quick-release diaphragm seals, with clamp connection

Quick-release diaphragm seals can be supplied for the pressure transmitters of the SITRANS P320/420 series.

The quick-release remote seals are common designs in the food industry. Their design means that the medium cannot accumulate in dead volumes. The remote seal's quick release mechanism enables fast disassembly for cleaning.

$d_M$ effective diaphragm diameter

© Siemens AG 2024

## Overview

The miniature diaphragm seals are available for the pressure transmitters of the SITRANS P320/420 series.

For high pressures, contaminated, fibrous and viscous media in the chemical, paper, food and drink industries.

## Design

The miniature diaphragm seals consist of a flush diaphragm, a fixed threaded pin and are free of dead space.

## Overview

Inline seals for flange-mounting

The inline seal is fully integrated into the process control. It is especially suitable for flowing and high-viscosity media.

The inline seal consists of a cylindrical jacket into which a thin-walled tube is welded. It is clamped directly between two flanges in the pipeline.

## Design

- Inline seals for flange-mounting (flange design) according to EN/ASME for SITRANS P320/420 pressure transmitters
  - For gauge and absolute pressure (only in connection with negative pressure service)
  - For differential pressure and flow
- Sealing surface according to EN 1092-1 or ASME B16.5
- Connection to the pressure transmitter directly or by means of a flexible capillary (max. 10 m long)
- See Technical specifications for details of materials used for the wetted parts
- Material used for the capillary, the protective jacket, the remote seal's main body and the measuring cell: Stainless steel, mat. no. 1.4571
- Filling liquid: Silicone oil, high-temperature oil, halocarbon oil, food oil (FDA-listed) vegetable oil or glycerin/water (not suitable for applications in negative pressure range).

## Function

The measured pressure is transferred to the filling liquid by the diaphragm and enters the sample chamber of the pressure transmitter either directly or through the capillary. The filling fluid completely fills the inside of the diaphragm seal, the capillary and the sample chamber of the pressure transmitter so that it is free of gas.

**Note**:

A vacuum-resistant remote seal is recommended for low-pressure operation, including during commissioning (see ordering data).

## Overview

Quick-release inline seal, according to DIN 11851 with screwed connector

Quick-release inline seal, with clamp connection

Quick-release inline seals are available for pressure transmitters of the SITRANS P320/420 series.

## Application

The quick-release inline seal is a special design for flowing and high-viscosity media. Because it is completely integrated in the process line, there are no turbulences, dead spaces or other obstacles in the flow direction. The medium flows almost unhindered through the inline seal and causes self-cleaning of the sample chamber. The inline seal is also piggable.

## Design

The quick-release lock is available in two versions:

- DIN 11851 with threaded socket
- Clamp connection

The inline seal is connected to the pressure transmitter either directly or via a capillary tube.

## Function

The measured pressure is transferred to the filling liquid by the measuring diaphragm located around the circumference inside the inline seal and enters the sample chamber of the pressure transmitter through the capillary. The filling fluid completely fills the inside of the inline seal, the capillary and the sample chamber of the pressure transmitter so that it is free of gas.

**Note**:

A vacuum-resistant remote seal is recommended for low-pressure operation, including during commissioning (see ordering data).

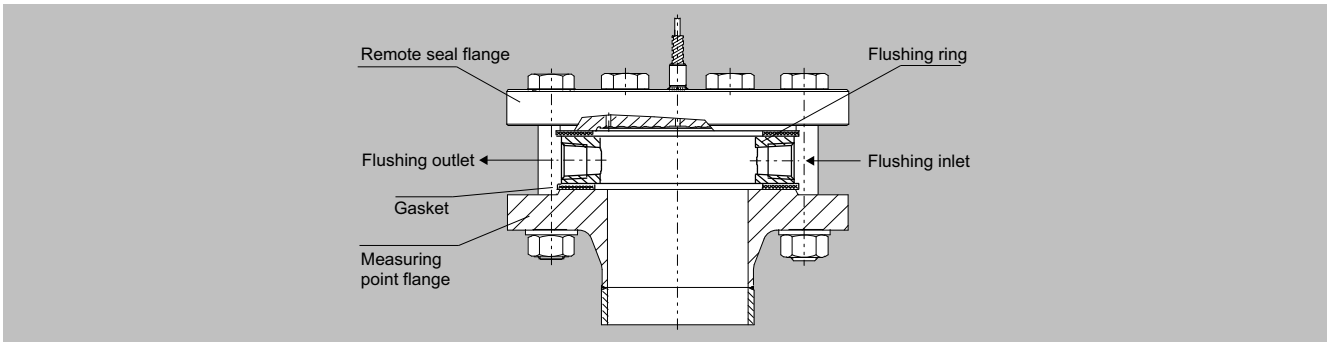
## Overview

Flushing rings are required for remote seals in flange and sandwich design (article numbers 7MF0800 ... 7MF0814) when the medium has a tendency to form deposits or blockages due to the process conditions and the geometry of the connection.

The ferrule is clamped in between the process flange and the remote seal.

Due to the lateral flushing holes, particles accumulated in front of the membrane can be washed away and the pressure space can be vented. Different nominal diameters and forms enable adaption to the relevant process flange.



***Process connection***

For flanges according to EN and ASME:
DN 50, 80, 100, 125; PN 16 ... 100 or
DN 2 inch, 3 inch, 4 inch, 5 inch; Class 150 ... 600

***Standard version***

Material: CrNi steel, mat. no. 1.4404/316L
Sealing surfaces and flushing holes: See ordering data

## Dimensional drawings

### *Mounting types for gauge pressure and level measurements (open vessels)*

Installation type A

Pressure transmitter
above the measuring point

Installation type B

Pressure transmitter
below the measuring point

$H_1 \leq 7$ m (23 ft), with halocarbon oil as filling liquid only $H_1 \leq 4$ m (13.1 ft)

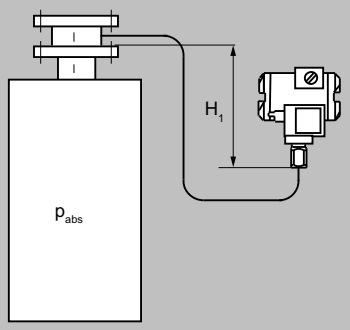
Installation type A

Lower range value: $p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{Oil} \cdot g \cdot H_1$

Upper range value: $p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{Oil} \cdot g \cdot H_1$

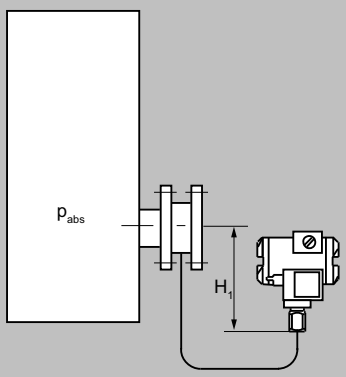
Installation type B

Lower range value: $p_{MA} = \rho_{FL} \cdot g \cdot H_U + \rho_{Oil} \cdot g \cdot H_1$



Upper range value: $p_{ME} = \rho_{FL} \cdot g \cdot H_O + \rho_{Oil} \cdot g \cdot H_1$

Legend



| | |
|---|---|
| $p_{MA}$ | Lower range value to be set |
| $p_{ME}$ | Upper range value to be set |
| $\rho_{FL}$ | Density of medium in vessel |
| $\rho_{Oil}$ | Density of filling oil in the capillary to the remote seal |
| g | Local acceleration due to gravity |
| $H_U$ | Lower range value |
| $H_O$ | Upper range value |
| $H_1$ | Distance between vessel flange and pressure trans. |

### *Mounting type for absolute pressure measurements (closed vessels)*

Installation type $C_1$

Installation type $C_2$

Pressure transmitter for absolute pressure always below the measuring point: $H_1 \geq 200$ mm (7.9 inch)

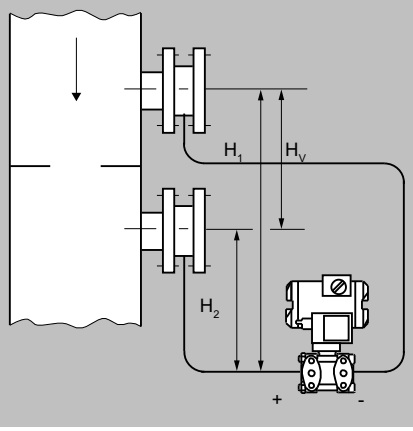
Installation type $C_1$ and $C_2$

Lower range value: $p_{MA} = p_{START} + \rho_{Oil} \cdot g \cdot H_1$

Upper range value: $p_{ME} = p_{END} + \rho_{Oil} \cdot g \cdot H_1$

Legend

| | |
|---|---|
| $p_{MA}$ | Lower range value to be set |
| $p_{ME}$ | Upper range value to be set |
| $p_{START}$ | Lower range value |
| $p_{END}$ | Upper range value |
| $\rho_{Oil}$ | Density of filling oil in the capillary to the remote seal |
| g | Local acceleration due to gravity |
| $H_1$ | Distance between vessel flange and pressure trans. |



© Siemens AG 2024

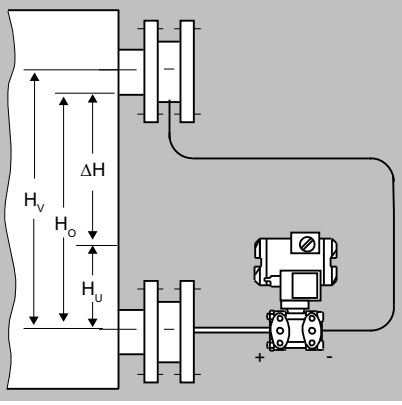
## Dimensional drawings (continued)

### *Mounting types for differential pressure and flow measurements*

Installation type D Filter monitoring

Installation type D

Lower range value: $p_{MA} = p_{START} - \rho_{Oil} \cdot g \cdot H_V$



Upper range value: $p_{ME} = p_{END} - \rho_{Oil} \cdot g \cdot H_V$

Legend

| | |
|---|---|
| $p_{MA}$ | Lower range value to be set |
| $p_{ME}$ | Upper range value to be set |
| $p_{START}$ | Lower range value |
| $p_{END}$ | Upper range value |
| $\rho_{Oil}$ | Density of filling oil in the capillary to the remote seal |
| g | Local acceleration due to gravity |
| $H_V$ | Distance between the measuring points (spigots) |

### *Mounting type for level measurements (closed vessels)*

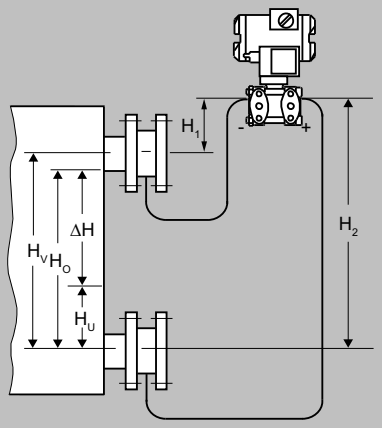
Installation type E

Installation type E

Lower range value: $p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{Oil} \cdot g \cdot H_V$

Upper range value: $p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{Oil} \cdot g \cdot H_V$

Legend



| | |
|---|---|
| $p_{MA}$ | Lower range value to be set |
| $p_{ME}$ | Upper range value to be set |
| $\rho_{FL}$ | Density of medium in vessel |
| $\rho_{Oil}$ | Density of filling oil in the capillary to the remote seal |
| g | Local acceleration due to gravity |
| $H_U$ | Lower range value |
| $H_O$ | Upper range value |
| $H_V$ | Distance between the measuring points (spigots) |

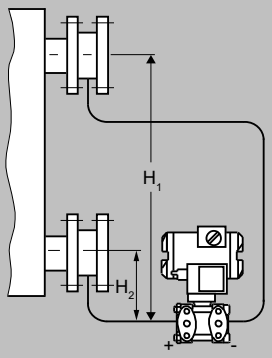
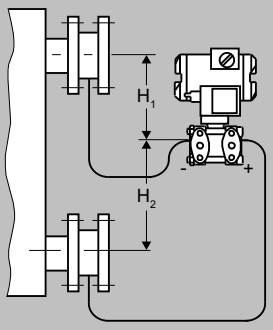
## Dimensional drawings (continued)



Installation type G

Pressure transmitter for differential pressure above the upper measuring point, no vacuum

$H_2$ ≤ 7 m (23 ft), with halocarbon oil as filling liquid only $H_1$ ≤ 4 m (13.1 ft)



Installation type H

below the lower measuring point

Installation type for vacuum applications

Installation type J

between the measuring points, no vacuum

$H_2$ ≤ 7 m (23 ft), with halocarbon oil as filling liquid only $H_2$ ≤ 4 m (13.1 ft)

Installation type G, H and J

Lower range value:
$p_{MA} = \rho_{FL} \cdot g \cdot H_U - \rho_{Oil} \cdot g \cdot H_V$

Upper range value:
$p_{ME} = \rho_{FL} \cdot g \cdot H_O - \rho_{Oil} \cdot g \cdot H_V$

Legend

| | | | |
|---|---|---|---|
| $p_{MA}$ | Lower range value to be set | g | Local acceleration due to gravity |
| $p_{ME}$ | Upper range value to be set | $H_U$ | Lower range value |
| $\rho_{FL}$ | Density of medium in vessel | $H_O$ | Upper range value |
| $\rho_{Oil}$ | Density of filling oil in the capillary to the remote seal | $H_V$ | Distance between the measuring points (spigots) |

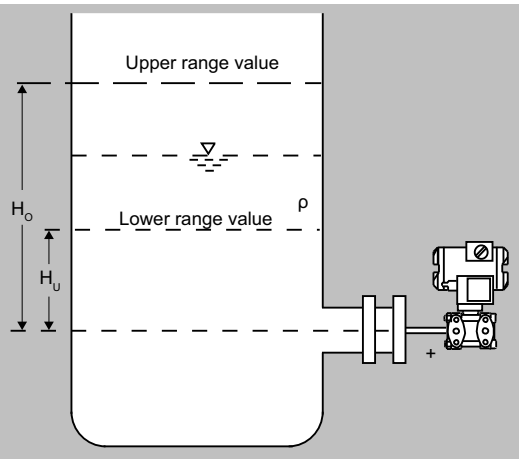
## Overview



***Notes***

- For interface measurements, the interface must be located between the two nozzles. In addition, the fill level of the container must always be above the top nozzle.
- A constant level of the process medium is required for density measurement. The level should be above the top nozzle.

## Dimensional drawings

## Overview

All shut-off fittings can be secured onto walls, racks (72 mm grid size) and vertical and horizontal pipes.

This offers the advantage when assembling a plant that the shut-off fittings can be secured first and the lines for the medium and differential pressure lines connected to them. It is then possible to check all connections for leaks and to blow out or flush the pipes in order to remove dirt (welding residues, shavings etc.).

Finally, when all piping is completed, the measuring instruments are screwed onto the shut-off fittings.

If a measuring instrument has to be removed for maintenance, the fittings and pipes remain intact. Only the valves have to be closed. The measuring instrument can then be detached and re-installed after maintenance.

***Classification according to pressure equipment directive (PED 2014/68/EU):***

For gasses of fluid group 1 and liquids of fluid group 1; compliance with requirements of article 4, paragraph 3 (sound engineering practice).

***Norm IEC 61518/EN 61518***

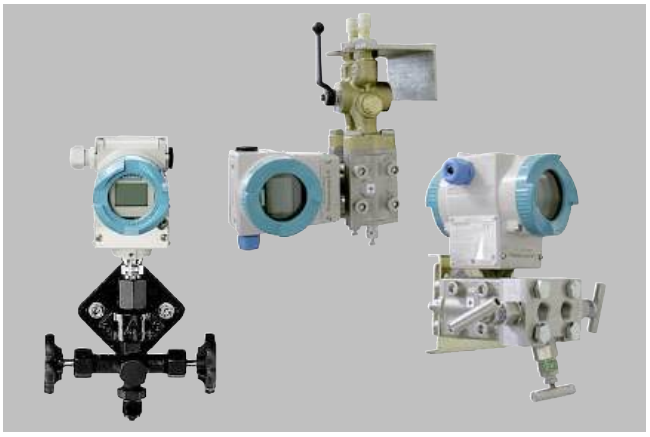
The flange connection between pressure transmitter and valve manifold was modified in the standard IEC 61518/EN 61518. The only connection thread approved for use in the process flanges of the pressure transmitter is $^{7}/_{16}$-20 UNF.

The valve manifolds for M12 screws, including the accessory sets, have therefore been deleted.

***Material inspection certificate to EN 10204-3.1***

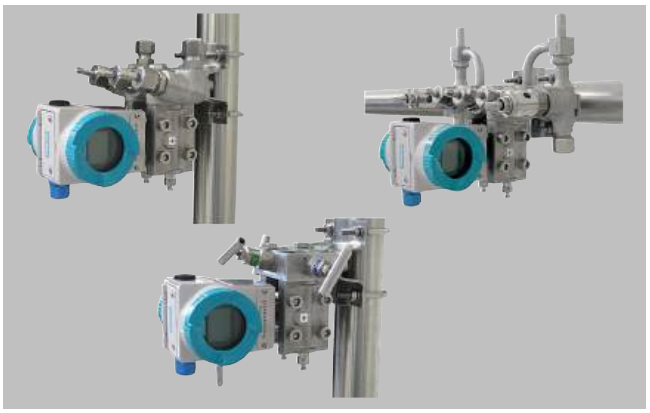
If a material inspection certificate according to EN 10204-3.1 is required for ordering valve manifolds or shut-off fittings, be aware that one certificate is sufficient for each valve type ordered. This means that you will only be charged for one certificate in the cost calculations.

***Minimum/maximum operating temperatures***



The maximum operating temperatures are given for each value or valve manifold.

The minimum operating temperatures depend on the material used for the valves or valve manifold. They are:



| Material | Minimum operating temperature |
|---|---|
| Brass | -10 °C (+14 °F) according to EN 12516-4 |
| Steel | -10 °C (+14 °F) according to AD200-W10 |
| Stainless steel | -40 °C (-40 °F) |

## Overview

Pressure transmitters with double shut-off valve 7MF9401-...

The shut-off valves for pressure gauges are used to shut off the measured medium line for corrosive and non-corrosive gases, vapors and liquids.

## Design

A siphon is installed in front of the shutoff value for measured materials with temperatures above 120 °C. The form B shut-off valves have a shaft with which a measuring instrument holder can be attached. No adapter is therefore required for fastening these valves. With double shut-off valves DN 5, the air-release/test connection can be shut off. This enables a zero point check on the pressure gauge. In addition, a characteristic curve test can be conducted on the pressure gauge using an external pressure sensor. The valve packing material is PTFE.

## Overview

The 2-spindle, 3-spindle and 5-spindle valve manifolds 7MF9411-5.. are for pressure transmitters for absolute pressure or gauge pressure.

The valve manifolds are used to shut off the differential pressure lines and to check the transmitter zero point.

The 2-spindle and the 5-spindle valve manifolds also enable venting on the transmitter side and checking of the pressure transmitter characteristic.

## Benefits

- Max. operating overpressure 420 bar (6092 psi)
- Each available in version for oxygen

## Application

The spindle valve manifolds DN 5 are designed for liquids and gases.

A version for oxygen is also available on request.

## Design

All versions of the valve manifolds have a process connection ½-14 NPT. The connection for the pressure transmitter is always designed as a flange connection according to IEC 61518/EN 61518, Form A. The 2-spindle and the 5-spindle valve manifold have a vent and test connection ¼-18 NPT in addition.

The valves have an external spindle thread.

***Materials used***

| Component | Material | Mat. no. |
|---|---|---|
| Enclosure | X 2 CrNiMo 17 13 2 | 1.4404/316L |
| Cones | X 6 CrNiMoTi 17 12 2 | 1.4571/316Ti |
| Spindles | X 2 CrNiMo 18 10 | 1.4404/316L |
| Head parts | X 5 CrNiMo 18 10 | 1.4401/316 |
| Packings | PTFE | - |

## Function

Functions of all valve manifolds:

- Shutting off the differential pressure lines
- Monitoring of pressure transmitter zero point

Additional functions of the 2-spindle or 5-spindle valve manifolds via the venting and test connection:

- Venting on transmitter side
- Monitoring of the pressure transmitter characteristic

## Accessories

***Accessory set for 2-, 3- and 5-spindle valve manifolds***

***2-spindle valve manifold DN 5***

- K35: 2 screws $^{7}/_{16}$-20 UNF x 1¾ inch to ASME B18.2.1, 1 flat gasket
- K15: 2 screws M10x45 according to EN 24 014, 2 washers, 1 flat gasket

***3-spindle and 5-way valve manifold DN 5***

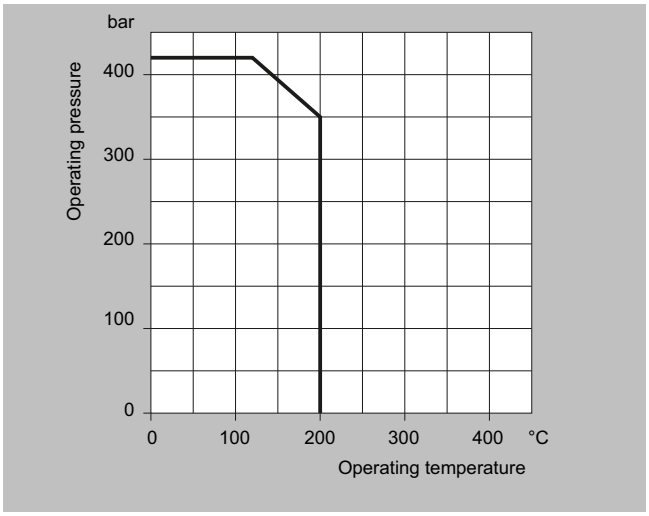
- K36: 4 screws $^{7}/_{16}$-20 UNF x 1¾ inch to ASME B18.2.1, 2 flat gaskets
- K16: 4 screws M10x45 according to EN 24 014, 4 washers, 2 flat gaskets

Washers Ø 10.5 according to DIN 125

Flat gaskets made of PTFE, max. permissible 420 bar (6092 psi), 80 °C (176 °F)

**Note**: Flange connection with M10 screws only permissible up to PN 160!

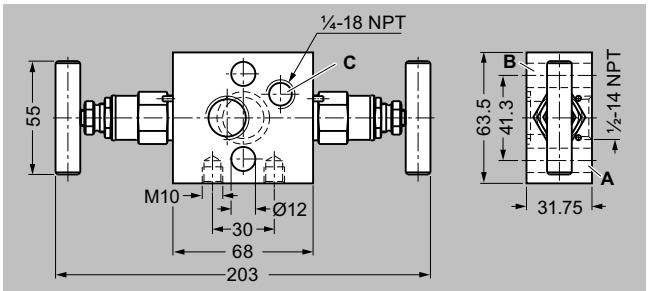
***Mounting plate***



Made of electrogalvanized sheet-steel

- M11: For wall mounting or for securing on rack (72 mm grid)
  Scope of delivery:
  - 1 mounting plate with bolts for mounting on valve manifold
- M12: For pipe mounting
  Scope of delivery:
  - 1 mounting plate M11
  - 2 pipe brackets with nuts and washers for pipes with max. Ø 60.3 mm

***Valve manifold 100 bar, suitable for oxygen***



- S12: For 2-way valve manifold
- S13: For 3-way valve manifold
- S14: For 5-way valve manifold

## Overview

The multiway cock PN 100 (1450 psi) can be flanged to pressure transmitters for differential pressure.

## Benefits

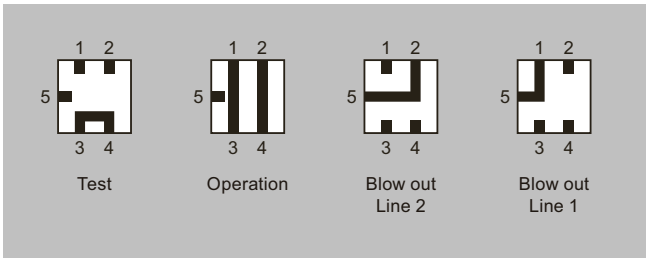
- Version for corrosive liquids, gases and vapors available
- Robust design
- Oil- and grease-free variant possible
- One-hand operation

## Application

The PN 100 (1450 psi) multiway cock is available in versions for corrosive and non-corrosive liquids, gases and vapors.

## Design

The multiway cock can be flanged with four screws to pressure transmitters for differential pressure.



The PN 100 (1450 psi) has 2 process connections and one blow-out connection. A steel version of the multiway cock is available for non-corrosive media, and a stainless steel version for corrosive media. The enclosure is forged in one piece. The switching lever is removable.

Sealing can be improved during operation.

**Note**: An accessory set is always required for flanging of the multiway cock to a differential pressure transmitter:

## Function

- Shutting off the differential pressure lines
- Blowing out differential pressure lines
- Checking the zero point of the pressure transmitter.

Cock settings, the symbols are on the cock

## Overview

The 3-way and 5-way valve manifolds DN 5 (7MF9410-1../-3..) are used to shut off the differential pressure lines and to check the transmitter zero point.

The 5-way valve manifold also enables blowing out of differential pressure lines.

## Benefits

- Available for corrosive and non-corrosive liquids and gases
- Max. working pressure 420 bar (6092 psi), with version for oxygen max. 100 bar (1450 psi)

## Application

The 3-way and 5-way valve manifolds are available in versions for corrosive and non-corrosive liquids and gases.

Wall mounting, securing on rack and tube mounting are possible with the appropriate mounting plate.

## Design

The process connection of the 3-way and 5-way valve manifolds is a pipe union with cutting ring.

Both valve manifolds have 2 flange connections for connecting a pressure transmitter.

The 5-way valve manifold also has 2 blowout connections.

Depending on the version, the valve manifold has 3 or 5 valves, each with an internal spindle thread.

## Circuit diagrams

3-way and 5-way valve manifolds, schematic diagram

© Siemens AG 2024

## Overview

The 3-way valve manifold DN 8 (7MF9416-1../-2..) is for pressure transmitters for differential pressure. It is used to shut off the differential pressure lines and to check the transmitter zero point.

In the versions with test connection, a test device can be connected to check the characteristic of the pressure transmitter.

## Benefits

- For corrosive and non-corrosive liquids and gases
- The maximum working pressure is 420 bar (6092 psi).

## Application

The 3-way valve manifold is available in versions for corrosive and non-corrosive liquids and gases.

Wall mounting, securing on rack and tube mounting are possible with the appropriate mounting plate.

## Design

In the version for non-corrosive measured mediums, you can choose between a pipe union with cutting ring and welding pins for the process connection.

The version for corrosive measuring media always has a pipe union with cutting ring.

The two versions are optionally available with a test connection M20x1.5.

The valves have an internal spindle thread.

***Materials used***

| | For non-corrosive liquids and gases | | For corrosive liquids and gases | |
|---|---|---|---|---|
| **Component** | **Material** | **Mat. no.** | **Material** | **Mat. no.** |

| Valve seats | X 6 CrNiMoTi 17 12 2 | 1.4571/316Ti | | |
| Packings | PTFE | - | PTFE | - |

## Function

The 3-way valve manifold DN 8 fulfills two functions as standard:

- Shutting off the differential pressure lines
- Monitoring of pressure transmitter zero point

All versions are also available with test connection to which the test device can be connected to check the characteristic of the transmitter.

## Accessories

***Accessory set for 3-way valve manifold DN 8 for flanging***

- B31: 4 screws $^{7}/_{16}$-20 UNF x $2^{1}/_{8}$ inches to ASME B 18.2.1, 2 flat gaskets
- B34: 4 screws $^{7}/_{16}$-20 UNF x $2^{1}/_{8}$ inches to ASME B 18.2.1, 2 O-rings (FPM 90)
- B11: 4 screws M10x55 according to EN 24014, 4 washers, 2 flat gaskets
- B16: 4 screws M10x55 according to EN 24014, 4 washers, 2 O-rings (FPM 90)

Washers Ø 10.5 according to DIN 125

Flat gaskets made of PTFE, max. permissible 420 bar (6092 psi), 80 °C (176 °F)

O-ring acc. to DIN 3771, 20 × 2.65 – S – FPM90, max. permissible 420 bar (6092 psi), 120 °C (248 °F)

**Note**: M10 screws only permissible up to PN 160 (2320 psi)!

***Mounting plate***

Made of electrogalvanized sheet-steel

- M11: For wall mounting or for securing on rack (72 mm grid)

  Scope of delivery:

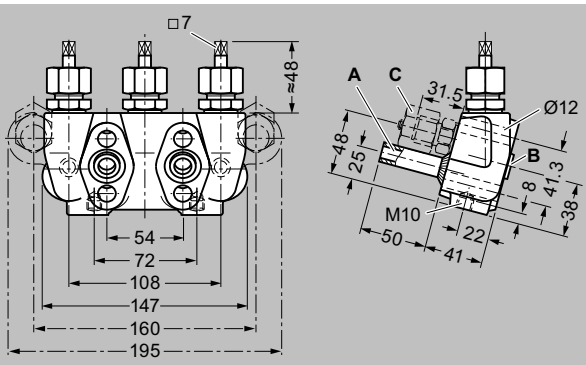
  - 1 mounting plate with bolts for mounting on valve manifold

- M12: For pipe mounting

  scope of delivery:

  - 1 mounting plate M11
  - 2 pipe brackets with nuts and washers for pipes with max. Ø 60.3 mm

## Characteristic curves

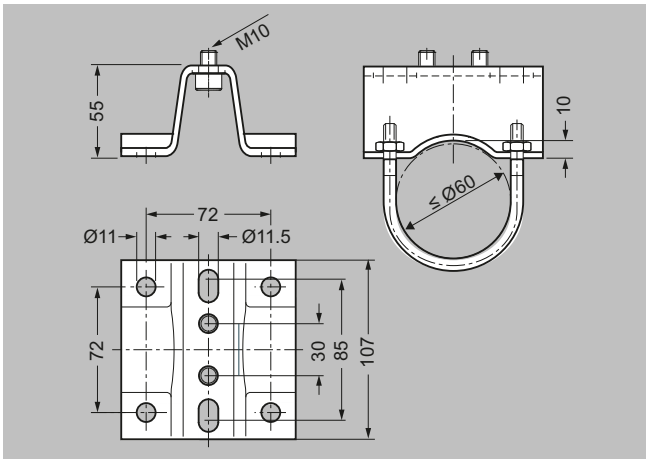


3-way valve manifold DN 8, permissible operating overpressure depends on the permitted operating temperature

## Dimensional drawings

A Process connection (e.g. on primary device):
Pipe union with ferrule, diameter 12 mm, S series to DIN 2353
B Transmitter connection: Flange connection to IEC 61518, form A
C Test connection: M20 x 1.5
Valve design: internal spindle thread

3-way valve manifold DN 8 (7MF9416-1..) with pipe union, dimensions in mm



A Process connection (e.g. on primary device):
Welding pin, diameter 14 x 2.5
B Transmitter connection: Flange connection to IEC 61518, form A
C Test connection: M20 x 1.5
Valve design: internal spindle thread

## Overview

The valve manifold combination DN 5/DN 8 (7MF9416-6..) is for pressure transmitters for differential pressure.

The combination is used to shut off and blow out the differential pressure lines and to check the transmitter zero point.

In the versions with test connection, a test device can be connected to check the characteristic of the pressure transmitter.

## Benefits

Max. operating overpressure 420 bar (6092 psi)

## Application

The valve manifold combination DN 5/DN 8 is designed for vapors.

## Design

The valve manifold combination DN 5/DN 8 has a process connection with welding pins.

The connection for the pressure transmitter is designed as a flange connection, the blowout connection as a pipe union with cutting ring.

The block valves have an internal spindle thread, the blowout valves have an external spindle thread.

The optional test connections are M20x1.5.

## Shut-off valves for differential pressure / DN 8 valve manifold combination

### Overview

The valve manifold combination DN 8 (7MF9416-4..) is for pressure transmitters for differential pressure.

They are used to shut off and blow out the differential pressure lines and to check the transmitter zero point.

In the versions with test connection, a test device can be connected to check the characteristic of the pressure transmitter.

### Benefits

Max. operating overpressure 420 bar (6092 psi)

### Application

The valve manifold combination DN 8 is designed for vapors.

### Design

The valve manifold combination DN 8 has a process connection with welding pins.

The connection for the pressure transmitter is designed as a flange connection, the blowout connection as a pipe union with cutting ring.

The block valves have an internal spindle thread, the blowout valves have an external spindle thread.

The optional test connection is M20x1.5.

The valve manifold combination DN 8 is supplied with a mounting plate.

# Shut-off valves for differential pressure / 2-, 3- and 5-spindle valve manifold for protective casing

## Overview

The 2-spindle, 3-spindle and 5-spindle valve manifolds (7MF9412-1..) are used to shut off the differential pressure lines and to check the pressure transmitter zero point.

The 2-spindle and the 5-spindle valve manifolds also enable venting on the transmitter side and checking of the pressure transmitter characteristic.

These valve manifolds are designed for installation in protective boxes. However, using a mounting bracket, they can also be used for wall, frame or pipe mounting.

## Application

The DN 5 valve manifolds are designed for liquids and gases and for installation in protective boxes.

A version for oxygen is also available on request.

## Design

All versions of the spindle valve manifolds have a process connection ½-14 NPT.

The connection for the pressure transmitter is always designed as a flange connection according to IEC 61518/EN 61518, Form A.

The 2-spindle and the 5-spindle valve manifold have a vent and test connection ¼-18 NPT in addition.

The valves have an external spindle thread.

Materials used:

| Component | Material | Mat. no. |
|---|---|---|
| Enclosure | X 2 CrNiMo 17 13 2 | 1.4404/316L |
| Cones | X 6 CrNiMoTi 17 12 2 | 1.4571/316Ti |
| Spindles | X 2 CrNiMo 18 10 | 1.4404/316L |
| Head parts | X 5 CrNiMo 18 10 | 1.4401/316 |
| Packings | PTFE | - |

## Function

Functions of all valve manifolds:

- Shutting off the differential pressure lines
- Monitoring of pressure transmitter zero point

Additional functions of the 2-spindle or 5-spindle valve manifolds via the venting and test connection:

- Venting on transmitter side
- Monitoring of the pressure transmitter characteristic

# Shut-off valves for differential pressure / 3- and 5-spindle valve manifold for vertical differential pressure lines

## Overview

These 3-spindle and 5-spindle valve manifolds 7MF9413-1.. were developed specifically for vertical differential pressure lines.

The valve manifolds are used to shut off the differential pressure lines and to check the transmitter zero point.

The 5-spindle valve manifold also enables venting on the transmitter side and checking of the pressure transmitter characteristic.

## Benefits

- For vertical differential pressure lines
- Max. operating overpressure 420 bar (6092 psi)

## Application

The 3-spindle and 5-spindle valve manifolds for vertical differential pressure lines are for liquids and gases. The valve manifolds are flanged to the pressure transmitter.

## Design

All versions of the spindle valve manifolds have a process connection ½-14 NPT.

The connection for the pressure transmitter is always designed as a flange connection according to IEC 61518/EN 61518, Form A.

The 2-spindle and the 5-spindle valve manifold have a vent and test connection ¼-18 NPT in addition.

Materials used:

| Component | Material | Mat. no. |
|---|---|---|
| Enclosure | X 2 CrNiMo 17 13 2 | 1.4404/316L |
| Cones | X 6 CrNiMoTi 17 12 2 | 1.4571/316Ti |
| Spindles | X 2 CrNiMo 18 10 | 1.4404/316L |
| Head parts | X 5 CrNiMo 18 10 | 1.4401/316 |
| Packings | PTFE | - |

## Function

Functions of all valve manifolds:

- Shutting off the differential pressure lines
- Monitoring of pressure transmitter zero point

Additional functions of the 2-spindle or 5-spindle valve manifolds via the venting and test connection:

- Venting on transmitter side
- Monitoring of the pressure transmitter characteristic

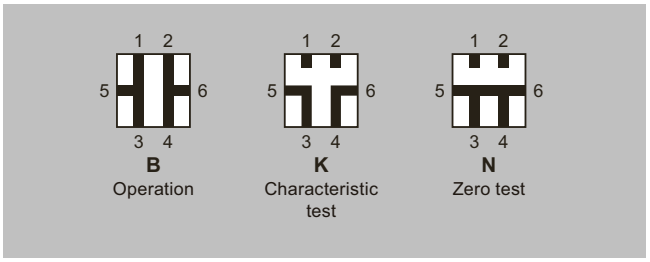
## Overview

The low-pressure multiway cock can be flanged to pressure transmitters for differential pressure.

## Benefits

- Robust design
- For liquids and gases
- One-hand operation



## Design

The multiway cock has two process connections and two test connections which are available in two versions ($G^3/_8$ sealing screws or quick-release couplings). The enclosure is made of pressed brass CuZn39Pb3, CW 614N. Test connections with screw plugs or with self-sealing quick-release couplings.

**Note:** An accessory set is always required for flanging of the multiway cock to a differential pressure transmitter.

## Function

- Shutting off the differential pressure lines
- Checking the zero point of the pressure transmitter.
- Checking the characteristic of the pressure transmitter.

Cock settings, the symbols are on the cock

## Overview

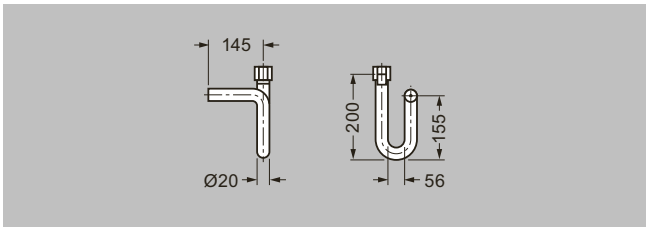
Water traps protect pressure measuring devices and shut-off fittings from heating up (e.g. by steam) by the water column produced by the water trap.

The max. operating temperature is 120 °C (248 °F) at 100 bar (1450 psi), 300 °C (572 °F) at 80 bar (1160 psi), 400 °C (752 °F) at 63 bar (914 psi). If the temperature of the measured medium is higher, a sufficiently long line has to be connected upstream of the trap to enable heat dissipation.

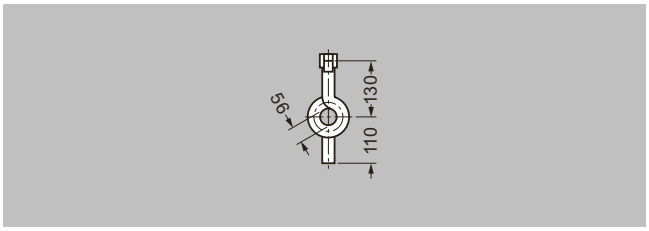
## Design

The water traps are available in U form (type B) or in circular form (type D) according to DIN 16282. On the measuring cell side, they consist of a weld-in end Ø 20 mm × 2.6 mm. The connection on the device side is a clamping sleeve G½ to DIN 16283.



The water traps are made of steel (P250GH) or stainless steel (X 6 CrNiMoTi 17 12 2)

Water traps are designed as standard for max. operating temperature 120 °C (248 °F) at a max. operating pressure of 100 bar (1450 psi) (300 °C (572 °F) at 80 bar (1160 psi), 400 °C (752 °F) at 63 bar (914 psi)). Water traps for higher operating pressures and temperatures are available on request.



## Selection and ordering data

## Overview

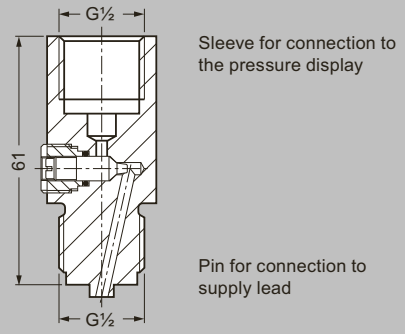
The pressure surge reducer protects the pressure gauge from damage, premature wear-and-tear, and an imprecise or vibrating display.

## Application

The pressure reducer is used when pulsations of the measured medium occur (e.g. in slow-running steam engines, piston pumps and compressors) or when sudden pressure increases and drops of the measured medium can be expected (e.g. in hydraulic presses and tensile testing machines).



## Design

- Brass or stainless steel enclosure (mat. no. 1.4571)
- Adjustable nozzle
- Sleeve for connection to the pressure gauge
- Shank for connection to the supply line

## Selection and ordering data

| | | | Article No. |

## Overview

The primary shut-off valves are available in the following versions:

- For non-corrosive liquids, gases and vapors
- For corrosive liquids and gases
- Grease-free for oxygen

The shut-off valves are available in different materials and with different connections (see ordering data).

## Overview

The compensation vessels prevent the level difference in the differential pressure lines on a change in pressure, which corrupts the measurement result.

According to DIN 19211, for calculating the wall thickness, the prevailing temperature in the compensation vessel should be assumed to be 50 K lower than the steam temperature in the pipeline. The reason is that the temperature in the condensate vessels during operation can rise no higher than the saturated steam temperature.

There is a material inspection certificate A according to EN 10204-3.1 for materials from which the compensation vessels are manufactured.

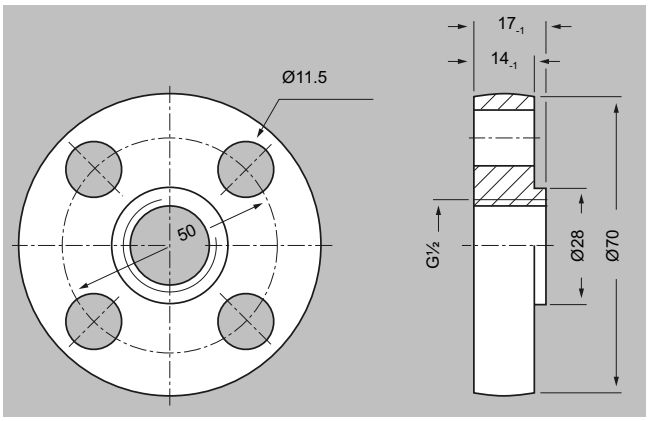
## Overview

Connection parts are available in the following versions:



- G½ threaded flange pair with stainless steel gasket
- G½ nipple connection, form V to DIN 19207
- G½ C 35 union nut to DIN 16284
- B½ sealing ring (grooved) to DIN 19207

All connection parts are also available grease-free for oxygen.

***Supplied product documentation on DVD and safety notes***

The scope of delivery of the Siemens products for process instrumentation includes a multilingual instruction sheet with **safety notes** as well as a uniform **mini DVD – Process Instrumentation and Weighing Systems**.

This DVD contains the most important manuals and certificates for the Siemens process instrumentation and weighing technology portfolio. The delivery may also contain product-specific or order-specific printed materials.

For more information, refer to section 10 "Appendix".

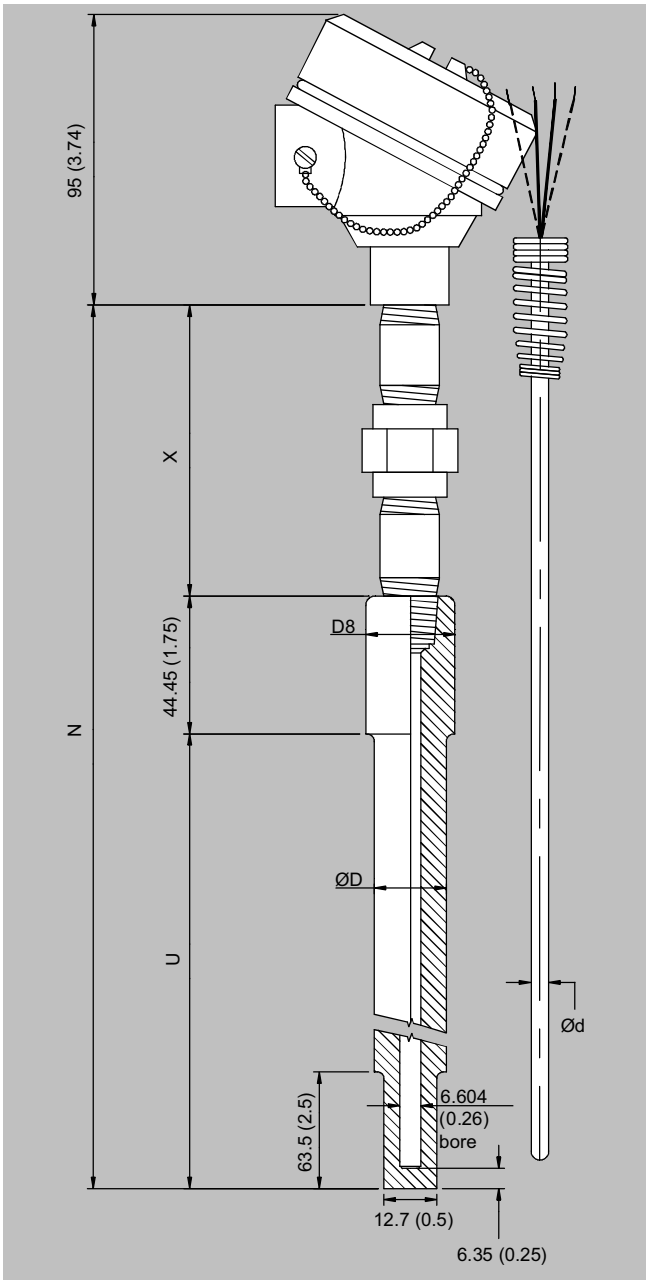
## Overview

Temperature sensors of the SITRANS TS500 product family are used to measure temperatures in industrial equipment.

## Benefits



The modular design makes it possible to customize the temperature sensor for most applications, while still being able to use many standardized individual components.

***SITRANS TS500 Temperature sensors as a modular system***

Due to their modular design, temperature sensors of the SITRANS TS500 series are well suited to a large number of applications. The replaceable measuring insert makes it possible to conduct maintenance work even during ongoing operations. These devices are used particularly frequently in vessels and pipelines of the following industries:

- Power plants
- Chemical industry
- Petrochemical industry
- General process engineering
- Water, waste water

## Design

SITRANS TS500, type SWR, socket reduced well, dimensions in mm (inch)

The temperature sensors of the SITRANS TS500 series are available in four different designs:

- General Purpose without Thermowell
- Threaded Thermowell
- Flanged Thermowell
- Socket Thermowell

© Siemens AG 2024

## Design (continued)

***Configuration components***

***Process connections***

Flanges

The different properties of the flanges are as follows:

- Standard series EN 1092, ASME 16.5,..
- Nominal pressure
- Nominal diameter
- Sealing face

This information is stamped into the flange, as well as the material code and batch number for "3.1 Material".

***Thermowell***

Thermowells fulfill two basic functions:

- They protect the measuring insert from aggressive media
- They make it possible to replace units during ongoing operations

This catalog is limited to the standard versions. Special versions are available on request.

- Barstock thermowells
  - Where process loads are too high, or where thermowells with welded seams are not allowed, deep hole drilled barstock thermowells are used.

***Extension (neck tube)***

The extension is the section from the lower edge of the connection head to the fixed point of the process connection or thermowell. There is a variety of terms for this components, e.g. neck tube. For this reason the term extension has been selected as a standardized term for the different designs. Function is the deciding factor:

- Thermal decoupling of connection head from process temperature
- Installation of connection head over existing insulation
- Simple standardization of measuring inserts: In general, the length of the extension may be freely selected. However, when using standardized insertion lengths ensures that measuring inserts are quickly available can be used.
- The extension takes the spring load of the sensor.
- Depending on the design, the extension can also be used to achieve an alignment of the connection head.

***Connection head***

The connection head protects the wiring connections. The connection head features sufficient room for mounting a terminal block or transmitter.

Different connection heads are used depending on the application and preference.

***Measuring insert***

Measuring inserts feature a large spring range. These measuring inserts are ideal for use with NPT threads with the typical loose tolerances. In this configuration, the extension function is partially or fully integrated (nipple-union-nipple). Moreover it is also possible to directly attach field devices, e.g. SITRANS TF.

***Transmitters***

SITRANS TH head transmitters process the weak non-linear sensor signals and transmit a stable and temperature-linear standard signal, thereby minimizing sensor signal disruptions.

The transmitters constantly monitor the temperature sensors and transmit diagnostic data to superordinate systems.

## Design (continued)

Because of the low energy feed of the SITRANS TH head transmitters, self-heating of the temperature sensors can be maintained at minimal levels.

The electrical isolation and integrated cold junction ensure that temperature sensors with thermocouples provide reliable measurements at a low cost.

SITRANS TH product family

For detailed technical data on the SITRANS TH transmitters, please refer to the catalog FI 01.

- TH100 - the basic device
  - Output 4 to 20mA
  - for Pt100
  - can be configured using simple software
- TH320 - the universal device
  - Output 4 ... 20 mA or:
  - Output 4 ... 20 mA/HART
  - 1 x input resistance thermometer, thermocouples
  - Can be configured using simple software
- TH420 - Twice as safe
  - Output 4 ... 20 mA/HART
  - 2 x input resistance thermometer, thermocouples, hot backup, drift detection, etc. can be achieved as a result
  - Extended diagnostics functions

© Siemens AG 2024

## Function

A complete measuring point consists of a measuring insert which contains the basic sensors, the protective fitting and an optional transmitter.

The basic sensors are:

- Resistance thermometers:
  - Temperature measurement is based on the temperature dependency of the installed measuring resistor.
- Thermocouples:
  - Temperature measurement is based on the Seebeck effect. A thermocouple which subjected to a temperature drop produces thermoelectric voltage that can be measured.

Transmitters:

The optional Siemens transmitters assume the following functions:

- Optimum measurement processing
- Strengthening of weak sensor signals directly on site
- Transmits standardized signals
- Protects against electromagnetic interferences
- Support enhanced diagnosis options

The resistance thermometer is intended for installation in containers and pipelines.

- Modular design consisting of thermowell, measuring insert, connection head and optional transmitter.
- Transmitter can be integrated (4 to 20 mA, PROFIBUS PA or FOUNDATION Fieldbus)

## Technical specifications

***Measuring technology: Sensor elements***

The diverse application spectrum for industrial temperature measuring technology requires different sensor technologies.

Resistance thermometer

Sensor elements made of other basic materials with different nominal resistances or different underlying standards are available on request. Resistance thermometers can be classified as follows:

- Basic design:
  - The sensor element is built with thin layer technology. The resistance material is applied in the form of a thin layer on a ceramic carrier material.
- Versions featuring increased vibration-resistance:
  - In addition to the basic design, the vibration resistance is improved through extra measures.
- Versions with expanded measuring range:
  - Elements in wire-wound design. The wire winding is embedded in a ceramic body.

Thermocouples

Other thermocouples based on other thermo couples or underlying standards are available upon request.

The most common base metal thermocouples include:

- Type K (NiCr-Ni) more stable than type J, but drifts in upper range.
- Type J (Fe-CuNi) narrow application band

***Measuring technology: Measuring range***

The measuring range describes the temperature limits within which the thermometer can be used in a way that is meaningful for measurement purposes. Depending on the loads present, the thermowell materials and the desired accuracy levels, the actual application range for the thermometer may be smaller.

| Resistance thermometer [°C (°F)] | |
|---|---|
| Basic version and increased vibration resistance | -50 ... +400 (-58 ... +752) |
| Expanded measuring range | -196 ... +600 (-320.8 ... +1112) |

| Thermocouple [°C (°F)] | |
|---|---|
| Type K | -40 ... +1000 (-40 ... +1132) |
| Type J | -40 ... +750 (-40 ... +1382) |

***Measuring technology: Measuring accuracy***

Resistance thermometer

The tolerance classes of the resistance thermometers correspond with IEC 751/EN 60751:

| Tolerance | Δt |
|---|---|
| Basic accuracy, Class B | ±(0.30 °C +0.0050\|t[°C]\|)<br>±(0.54 °F +0.0050\|t [°F]-32\|) |
| Increased accuracy, Class A | ±(0.15 °C +0.0020\|t[°C]\|)<br>(±(0.27 °F +0.0020\|t [°F]-32\|)) |
| High degree of accuracy, Class A+ (1/3 B) | ±(0.10 °C +0.0017\|t[°C]\|)<br>(±(0.18 °F +0.0017\|t [°F]-32\|)) |

The following tables provide an overview of the scope of these tolerances. If you exceed the specified limits with a resistance thermometer, the values of the next lower accuracy class apply:

| Resistance thermometer<br>Basic version [°C (°F)] | |
|---|---|
| **Tolerance** | **Range** |
| Basic accuracy, Class B | -50 ... +400 (-58 ... +752) |
| Increased accuracy, Class A | -30 ... +300 (-22 ... +572) |
| High degree of accuracy, Class A+ (1/3 B) | 0 ... 150 (32 ... 302) |

| Resistance thermometer<br>Increased vibration-resistance [°C (°F)] | |
|---|---|
| **Tolerance** | **Range** |
| Basic accuracy, Class B | -50 ... +400 (-58 ... +752) |
| Increased accuracy, Class A | -30 ... +300 (-22 ... +572) |
| High degree of accuracy, Class A+ (1/3 B) | 0 ... 150 (32 ... 302) |

| Resistance thermometer<br>Expanded measuring range [°C (°F)] | |
|---|---|
| **Tolerance** | **Range** |
| Basic accuracy, Class B | -196 ... +600 (-321 ... +1112) |
| Increased accuracy, Class A | -100 ... +450 (-148 ... +842) |

Thermocouples

The tolerance classes of the thermocouples correspond with IEC 584/EN 60584.

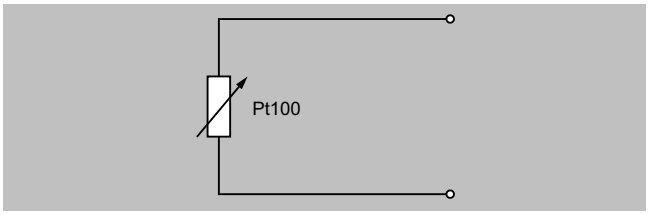
***Measuring technology: Connection types***

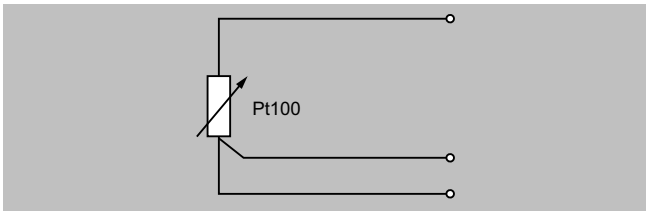
In the case of resistance thermometers, the type of sensor connection directly affects the level of accuracy:



Two-wire system

The resistance of sensor lines are included in the measurement result as an error. Adjustments are recommended in this case.

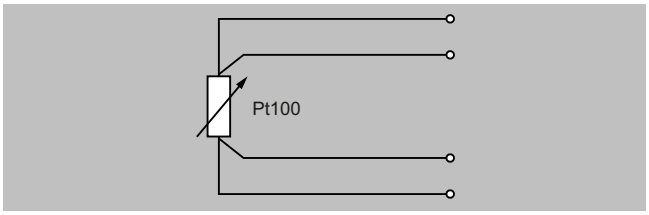
© Siemens AG 2024



## Technical specifications (continued)

Pt100 Two-wire system

Three-wire system



Line resistance is not included in the measurement result. Requirements: all terminal and line resistances (corrosion) are at the same level, and terminals are at the same temperature level.

Pt100 Three-wire system

Four-wire system

Line resistance is not included in the measurement result. This type of connection is the most secure and most accurate.

Pt100 Four-wire system

Siemens measuring inserts can be used to implement all types of connections for 1 x Pt100 devices. In the case of 2 x Pt100 versions, two- and three-wire systems are also possible. For measurement-related reasons, we always recommend a 1 x four-wire or 2 x 3-wire connection.

Thermowell calculation

Properly applied load diagrams will provide a sufficient degree of safety for the most common thermowell configurations.

However, there are cases in which operating conditions deviate too greatly from standard parameters. In this case, a customized thermowell calculation may be required.

Another reason for doing this calculation is the fact that flowing media can create turbulence at the tip of the thermowell under certain conditions. The thermowell will then vibrate and may even be destroyed if not configured correctly. This is the most frequent cause of thermowell bailure.

SIEMENS offers the two recognized methods for calculating the thermowell:

- DIN/Dittrich method
- ASME/Murdock method
  - This method also takes into account turbulence formation on a mathematical level.

Both methods provide a high degree of safety with regard to thermowell configuration, however, they do not provide a guarantee against breakdowns.

Materials

| Material descriptions/Standards comparison | | | | Max. temperature [°C (°F)] (unloaded) | Properties | Applications |
|---|---|---|---|---|---|---|
| **Mat. No.:** | **AISI/Trade name:** | **EN 10028-2:** | **Description** | | | |
| 1.4404 or 1.4435 | AISI 316 L | X2CrN-iMo17-12-2 | Austenitic stainless steel | 600 (1112) | Good acid resistance, resistant against grain boundary corrosion | Chemical industry, waste treatment, paper and cellulose industry, food industry |
| 2.4816 | Inconel 600 | NiCr15Fe | Nickel-Chrome alloy | 1150 (2102) | Resistant at high temperatures, resistant against chlorine-induced cold crack corrosion | Chemical industry, petrochemical industry, food industry |

© Siemens AG 2024

## Technical specifications (continued)

| Material descriptions/Standards comparison | | | | Max. temperature [°C (°F)] (unloaded) | Properties | Applications |
|---|---|---|---|---|---|---|
| 1.4876 | Incoloy 800 | X10NiCrAlTi32--21 | Austenitic heatresistant stainless steel | 1100 (2012) | Excellent resistance against oxidation and carbonization at high temperatures, good corrosion resistance | O&G industry, waste gas treatment, power plants (steam boiler, heat exchanger), applications using aggressive fluids |
| 2.4819 | Hastelloy C 276 | NiMo16Cr15W | Nickel-Chrome-Molybdenum alloy | 1100 (2012) | Resistant at high temperatures, in oxidizing and reducing atmosphere, resistant against pitting and crevice corrosion, good corrosion resistance after welding | Chemicals industry, paper and cellulose industry, waste treatment, waste incinerators, emissions controls, shipbuilding and offshore industry |
| 2.4360 | Monel 400 | NiCu30Fe | Nickel-Copper alloy | 500 (932) | Excellent corrosion resistance, particularly against chlorineinduced cold crack corrosion | Chemical industry, offshore industry, nuclear technology, petrochemical industry |

Where cost-intensive materials are used with flange thermowells, cost savings can be achieved by using a so-called flanged wheel. A thin disc of the material which comes into contact with media is applied prior to the flange (ordinary stainless steel).

Vibration resistance of measuring insert, cable sensor

Similar to the thermowell, inner (Karman vortices) and outer (plant) vibrations also affect the measuring insert. For this reason, a special assembly of measurement elements is required. Other than a few exceptions for cable and compact thermometers, Siemens only produces sensors based on a mineral-insulated cable. Together with precautions taken when installing the measuring element, the Siemens basic version already exceeds EN 60751 by more than a factor of 3. Pursuant to the measurement methods of this standard, the following values are obtained (tip-tip):

- 10 g: Basic version and expanded measuring range
- 60 g: Increased vibration-resistance and thermocouple

***Electrical stability***

Insulation resistance

The insulation resistance between each measuring circuit and the fitting is tested at a voltage of 500 V DC at room temperature.

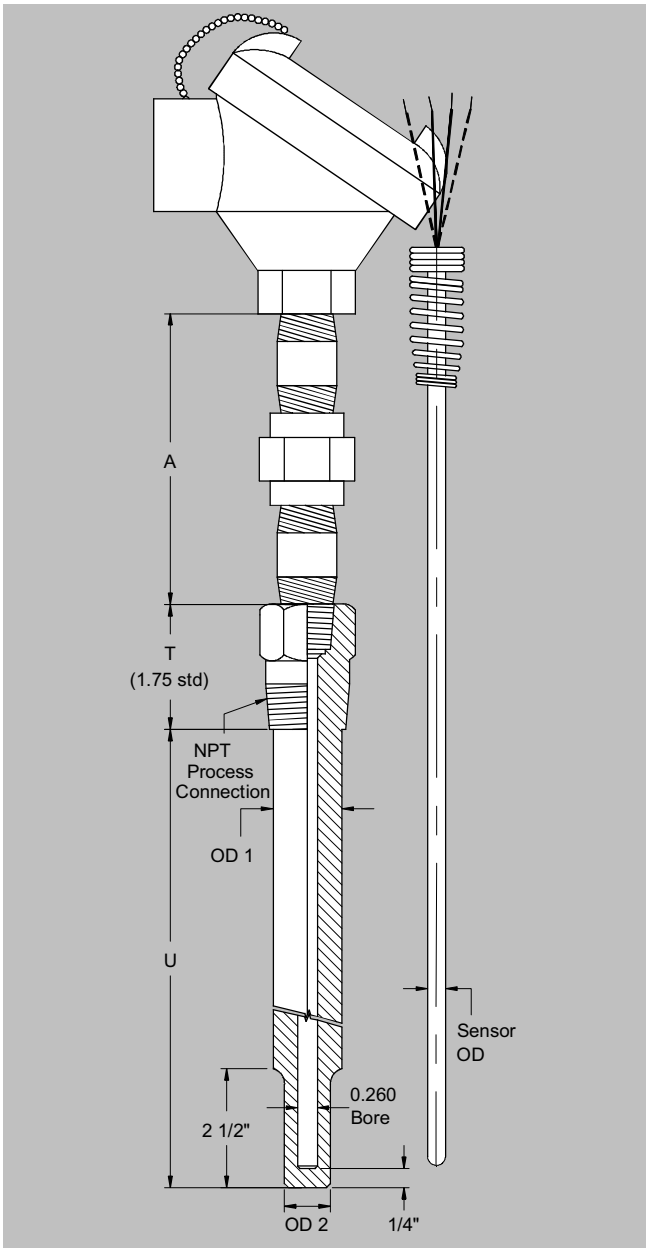
Riso ≥ 100 MΩ

Due to the property of the mineral-insulated cable, the insulation resistance decreases as temperature increases. Because of the special production method, it is, however, possible to achieve very good values even at high temperatures.

Line resistance

When connected to two-wire systems, the line resistance is included in the measurement result. The following rule of thumb can be used:

- Ø Measuring insert 6 mm (0.24 in) 2.8 Ω/m or 44.78 (44.78 ).



For this reason a connection to three- or four-wire systems is highly recommended.

Circuit diagram for thermocouple

Where thermocouples are used, the use of head transmitters offers particular advantages: The cold junction is already integrated into the universal transmitter. There is no need for expensive thermo or extension cable. This also removes a number of possible error sources. The weak millivolt signal of the thermocouple is already converted into a stable and temperature-linear DC or bus signal on site. This drastically reduces the effects of electromagnetic factors on the measurement result.

If a head transmitter is not installed, the sensor feed line consists either of the appropriate thermo or extension leads. The thermo line is made from the thermo material of the relevant thermo-couple, while the extension lead uses a cost-effective substitute material. The extension cable behaves similar to a thermo line at an electrical level, within a limited temperature range of up to 200°C. A wide spectrum of color coding is available for thermocouples on an international level. This must be taken into account during the electrical connecting.

## Overview

The SITRANS TH100, which represents an economical alternative by dispensing with galvanic isolation and universal sensor connection, is ideally suited for Pt100 measurements.

For the parameterization, the SIPROM T software is used in combination with the modem for SITRANS TH100/TH200.

Its compact design makes the SITRANS TH100 suitable for retrofitting measuring points or replacing analog transmitters.

The transmitter is available in a non-Ex version and in a version suitable for use in hazardous areas.

## Benefits

- Transmitter with 2-wire system
- Mounting in connection head, type B or larger or on DIN rail
- Programmable; as a result, the sensor connection, measuring range and much more are programmable
- Intrinsically safe version for use in hazardous areas

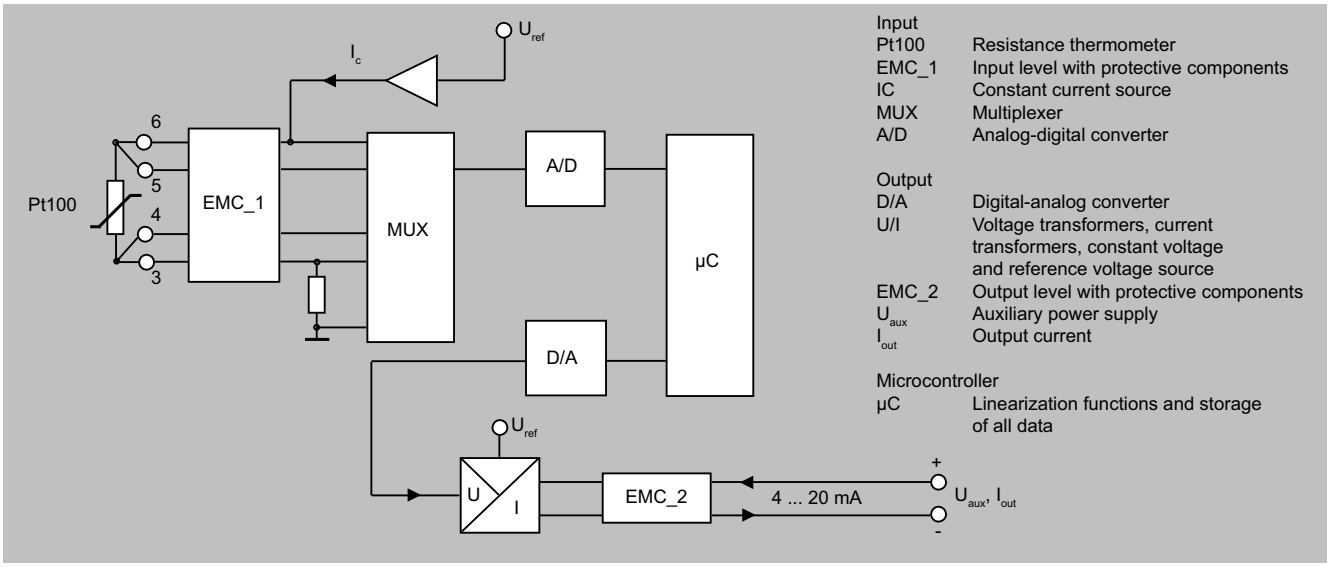
## Application

The SITRANS TH100 transmitter can be used for temperature measurement with Pt100 resistance thermometers in all industries. Its compact size means that it can be installed in connection heads of type B or larger.

The output signal is a load-independent direct current of 4 to 20 mA which is proportional to the temperature.

Parameterization is implemented over the PC using the parameterization software SIPROM T and the modem for SITRANS TH100/TH200. If you already have a "Modem for SITRANS TK" (article number 7NG3190-6KB), you can continue to use this for parameterization of the SITRANS TH100.

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices meet the directive 2014/34/EU (ATEX) as well as the FM and CSA requirements.



## Function

***Mode of operation***

The measured signal supplied by a Pt100 resistance thermometer (2, 3 or 4-wire connection) is amplified in the input stage. The voltage, which is proportional to the input variable, is then converted into digital signals by a multiplexer in an analog-to-digital converter. They are converted in the microcontroller in accordance with the sensor characteristic and further parameters (measuring range, damping, ambient temperature, etc.).

The signal prepared in this way is converted in an analog-to-digital converter into a load-independent direct current of 4 to 20 mA.

An EMC filter protects the input and output circuits against electromagnetic interferences.

## Circuit diagrams

SITRANS TH100, sensor connection assignment

© Siemens AG 2024

## Overview

- 2-wire head transmitter with and without HART communications interface
- Mounting in the connection head of the temperature sensor
- Universal input for virtually any type of temperature sensor
- Can be configured via PC, HART 7 or optional local operation

## Benefits

- Compact design
- Flexible mounting and center hole allow you to select your preferred mounting type
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring wire break and short-circuit
- Self-monitoring
- Configuration status stored in EEPROM
- SIL2/3 (with order note C20)
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to EN 61326 and NE21

## Application

SITRANS TH320 transmitters can be used in all sectors. Its compact size means that it can be installed in connection heads of type B or larger. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2-wire, 3-wire, 4-wire connection)
- Thermocouples
- Linear resistance, potentiometer and DC voltage sources

With HART communications interface:

- The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

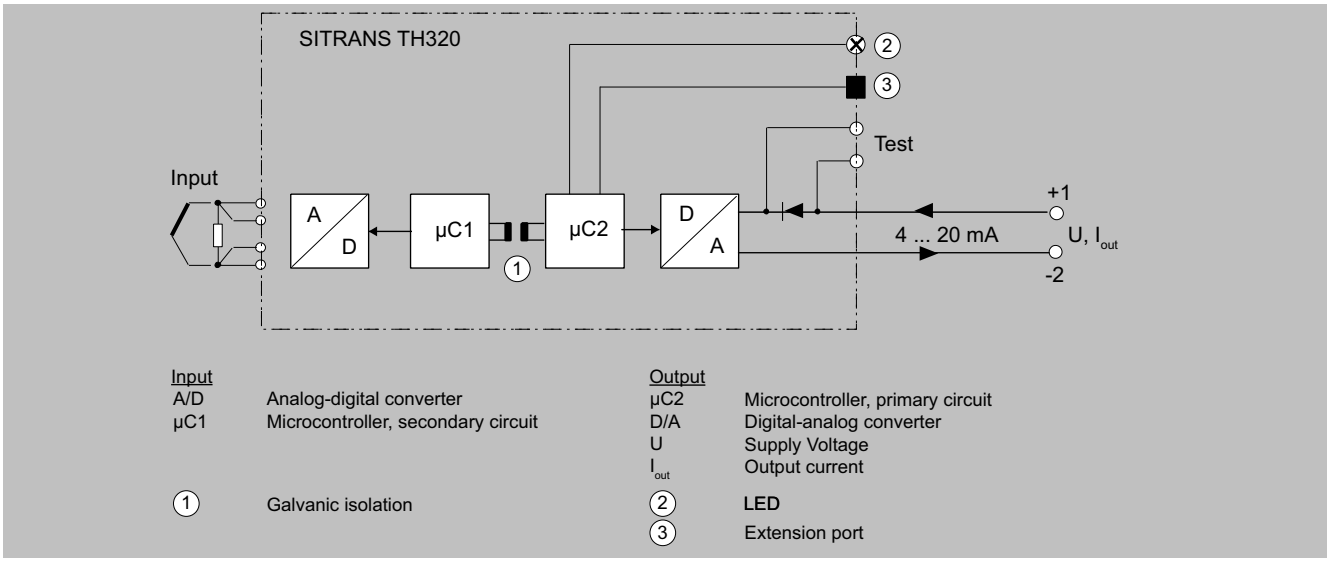
## Function

***Without HART communications interface***



For the SITRANS TH320 without HART functionality, parameters are assigned with the PC. A special modem and the software tool SIPROM T are available for this purpose.

***With HART communications interface:***

The SITRANS TH320 is configured via HART. The configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM parameterization software. The configuration data is then permanently stored in the non-volatile memory (EEPROM).

After correct connection of input and supply voltage, the transmitter outputs a temperature-linear output signal and the diagnostics LED is green. In case of external errors, e.g. sensor short circuit or interruption, the LED flashes red; an internal device error is indicated by a permanent red light.

An ammeter can be connected at any time for checking and plausibility via the test terminals. The output current can be read without any interruption, or even without opening the current loop.

| Input | | Output | |
|---|---|---|---|
| A/D | Analog-digital converter | µC2 | Microcontroller, primary circuit |
| µC1 | Microcontroller, secondary circuit | D/A | Digital-analog converter |
| | | U | Supply Voltage |
| | | $I_{out}$ | Output current |
| ① | Galvanic isolation | ② | LED |
| | | ③ | Extension port |

## Overview

- 2-wire head transmitter with HART communications interface
- Mounting in the connection head of the temperature sensor
- Universal input for virtually any type of temperature sensor
- Connection of two independent input circuits for redundant operation (high input availability)
- Input drift detection
- Configurable via HART 7

## Benefits

- Compact design
- Connection of two independent input circuits for redundant operation (high input availability)
- Flexible mounting and center hole allow you to select your preferred mounting type
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring wire break, short-circuit and drift
- Self-monitoring
- Configuration status stored in EEPROM
- SIL2/3 (with order note C20)
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to EN 61326 and NE21

## Application

The SITRANS TH420 transmitter with two inputs can be used in all sectors. Its compact size means that it can be installed in connection heads of type B or larger. Due to its universal input module, the following sensors and signal sources can be connected in redundant operation (high input availability):

- 2 resistance thermometers (2-wire, 3-wire, 4-wire connection)
- 2 thermocouples
- 2 linear resistors, potentiometer and DC voltage sources

The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

The dual input mode also supports drift detection of the inputs, whereby maintenance intervals can be more easily planned.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

## Function

The SITRANS TH420 is configured via HART. The configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM configuration software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

After correct connection of input and supply voltage, the transmitter outputs a temperature-linear output signal and the diagnostics LED is green. In case of external errors, e.g. sensor short circuit or interruption, the LED flashes red; an internal error is indicated by a permanent red light.

An ammeter can be connected at any time for checking and plausibility via the test terminals. The output current can be read without any interruption, or even without opening the current loop.

## Selection and ordering data (continued)

### *Accessories*

| | Article No. |
|---|---|
| Other accessories for assembly, connection and transmitter configuration, see page 2/198. | |
| **Modems** | |
| HART modem with USB interface | **7MF4997-1DB** |
| **SIMATIC PDM parameterization software** | See Catalog FI 01 section 8 |
| **Mounting rail adapter for head transmitter** (Quantity delivered: 5 units) | **7NG3092-8KA** |
| **Connecting cable** 4-wire, 200 mm (7.87 inches), for input connections when using head transmitters in the high spring flap (set with 5 units) | **7NG3092-8KC** |

### *Ordering example*

7NG0410-0BA00-0AA0-Z Y01
Y01: -10 ... +100 °C

### *Factory setting*

- Input 1: Pt100 (IEC 751); 3-wire connection
- Input 2: not configured (inactive)
- Measuring range: 0 ... 100 °C (32 ... 212 °F)
- Fault current
  - Device fault: < 3.6 mA
  - Input circuit wire break: 22.8 mA
  - Input circuit short-circuit: 22.4 mA
  - Input circuit drift: 22 mA (active when input 2 is active)
  - Input monitoring wire break and short-circuit
- No trimming of input and output (offset)
- Damping 0.0 s

## Technical specifications

| SITRANS TH420 (HART, universal) | |
|---|---|
| **General** | |
| Supply voltage[1) 2)] | |
| • Without explosion protection (non-Ex) | 7.5 ... 48 V DC |
| • With explosion protection (Ex i) | 7.5 ... 30 V DC |
| Additional minimum supply voltage when using test terminals | 0.8 V |
| Maximum power loss | ≤ 850 mW |
| Minimum load resistance at supply voltage > 37 V | ($V_{supply}$ - 37 V)/23 mA |
| Insulation voltage, test/operation | |
| • Without explosion protection (non-Ex) | 2.5 kV AC/55 V AC |
| • With explosion protection (Ex i) | 2.5 kV AC/42 V AC |
| Polarity protection | All inputs and outputs |
| Write protection | Wire jumpers or software |
| Warm-up time | < 5 min |
| Starting time | < 2.75 s |
| Programming | HART |
| Signal-to-noise ratio | > 60 dB |
| Long-term stability | Better than:<br>• ± 0.05% of measuring span/year<br>• ± 0.18% of measuring span/5 years |
| Response time | ≤ 75 ms (typically 70 ms) |
| Programmable damping | 0 ... 60 s |
| Signal dynamic | |
| • Input | 24 bit |
| • Output | 18 bit |
| Influence of change in supply voltage | < 0.005% of measuring span/V DC |
| **Input** | |
| ***Resistance thermometer (RTD)*** | |
| Input type | |
| • Pt10 ... 10000 | • IEC 60751<br>• JIS C 1604-8<br>• GOST 6651_2009<br>• Callendar Van Dusen |

1) Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TH420. All external voltage drops must be taken into account.
2) Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.
3) Additional available certificates are listed on the internet at http://www.siemens.com/processinstrumentation/certificates

## Overview

SITRANS TH100 Slim is particularly suited for the production of compact thermometers with integrated transmitter.

Its cylindrical stainless steel enclosure is simply welded to the basic body of the compact thermometer.

Its compact design makes the SITRANS TH100 Slim the ideal solution for manufacturers from a wide variety of industries.

For the parameterization, the SIPROM T software is used in combination with the modem for SITRANS TH100/TH200.

## Benefits

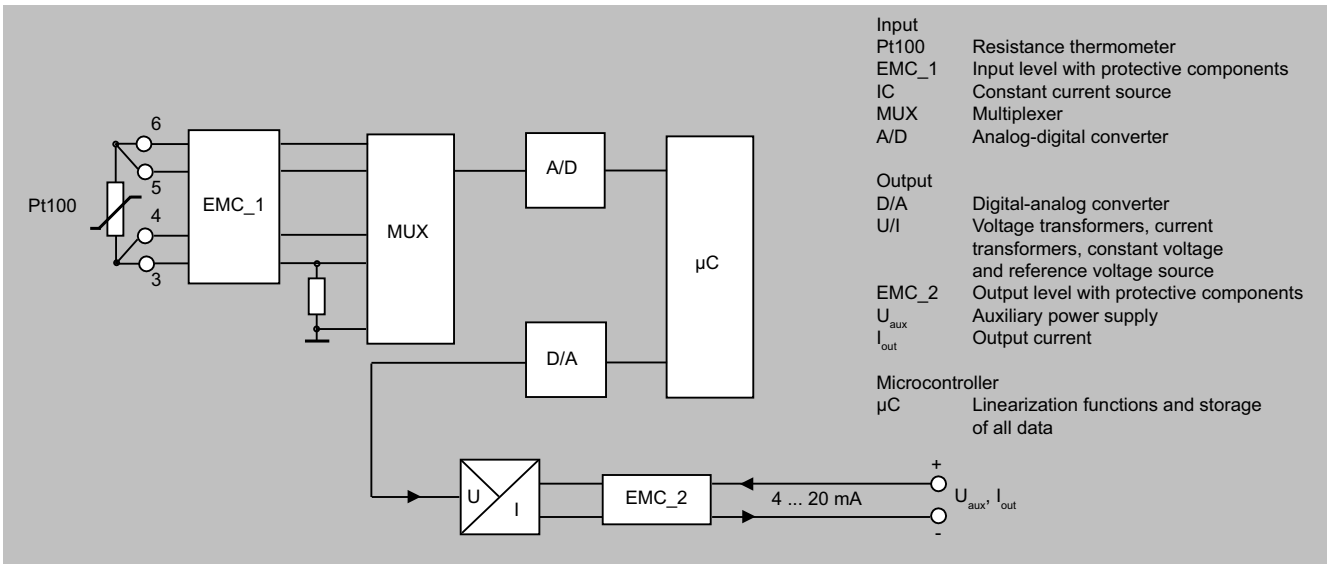
- Transmitter in 2-wire system with M12 device plug for mounting on compact thermometer.
- Solution for easy and space-saving temperature measurements in a variety of industries.
- Programmable; as a result, the sensor connection, measuring range and much more are programmable.

## Application

The SITRANS TH100 Slim transmitter can be used in combination with Pt100 compact resistance thermometers for temperature measurement in all industries. Thanks to its compact design, it can be mounted to all kinds of designs.

The output signal is a load-independent direct current of 4 to 20 mA which is proportional to the temperature.

Parameterization is implemented over the PC using the parameterization software SIPROM T and the modem for SITRANS TH100/TH200. If you already have a "Modem for SITRANS TK" (article number 7NG3190-6KB), you can continue to use this for parameterization of the SITRANS TH100.



## Function

***Mode of operation***

The measured signal supplied by a Pt100 resistance thermometer (2, 3 or 4-wire connection) is amplified in the input stage. The voltage, which is proportional to the input variable, is then converted into digital signals by a multiplexer in an analog-to-digital converter. They are converted in the microcontroller in accordance with the sensor characteristic and additional parameters (measuring range, damping, ambient temperature, etc.).

The signal prepared in this way is converted in an analog-to-digital converter into a load-independent direct current of 4 to 20 mA.

An EMC filter protects the input and output circuits against electromagnetic interferences.

## Overview

- 2-wire rail transmitter with and without HART communications interface
- Enclosure for DIN rail mounting
- Universal input for virtually any type of temperature sensor
- Can be configured via PC, HART 7

## Benefits

- Compact design
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring wire break and short-circuit
- Self-monitoring
- Configuration status stored in EEPROM
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to EN 61326 and NE21
- SIL2/3 (with order note C20)

## Application

SITRANS TR320 transmitters can be used in all sectors. Their compact design enables simple mounting on standard DIN rails on-site in protective boxes or in control cabinets. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometer (2-wire, 3-wire, 4-wire connection)
- Thermocouples
- Linear resistance, potentiometer and DC voltage sources

With HART communication interface:

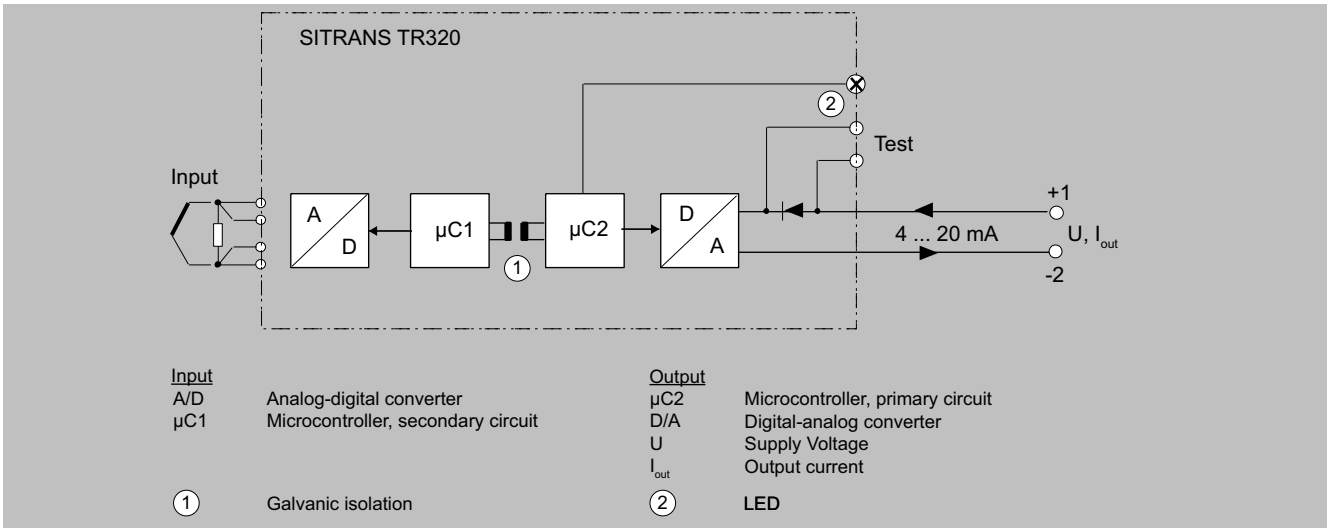
- The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

© Siemens AG 2024

## Function

***Without HART communications interface***



For the SITRANS TR320 without HART functionality, parameters are assigned with the PC. Available for this purpose are a special modem and the software tool SIPROM T.

***With HART communications interface:***

- The SITRANS TR320 is configured via HART. The configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM configuration software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

After correct connection of input and supply voltage, the transmitter outputs a temperature-linear output signal and the diagnostics LED is green. In case of external errors, e.g. sensor short circuit or interruption, the LED flashes red; an internal error is indicated by a permanent red light.

An ammeter can be connected at any time for checking and plausibility via the test terminals. The output current can be read without any interruption, or even without opening the current loop.

1) Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TR320. All external voltage drops must be taken into account.
2) Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.
3) Additional available certificates are listed on the internet at http://www.siemens.com/processinstrumentation/certificates

## Overview

- 2-wire rail transmitter with HART communications interface
- Device for rail mounting
- Universal input for virtually any type of temperature sensor
- Connection of two independent input circuits for redundant operation (high input availability)
- Input drift detection
- Configurable via HART 7

## Benefits

- Compact design
- Connection of two independent input circuits for redundant operation (high input availability)
- Galvanic isolation
- Test terminals for ammeter
- Diagnostics LED (green/red)
- Input monitoring wire break and short-circuit
- Self-monitoring
- Configuration status stored in EEPROM
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility according to EN 61326 and NE21
- SIL2/3 (with order note C20)

## Application

SITRANS TR420 transmitters with two inputs can be used in all sectors. Their compact design enables simple mounting on standard DIN rails on-site in protective boxes or in control cabinets. The following sensors/signal sources can be connected over their universal input module:

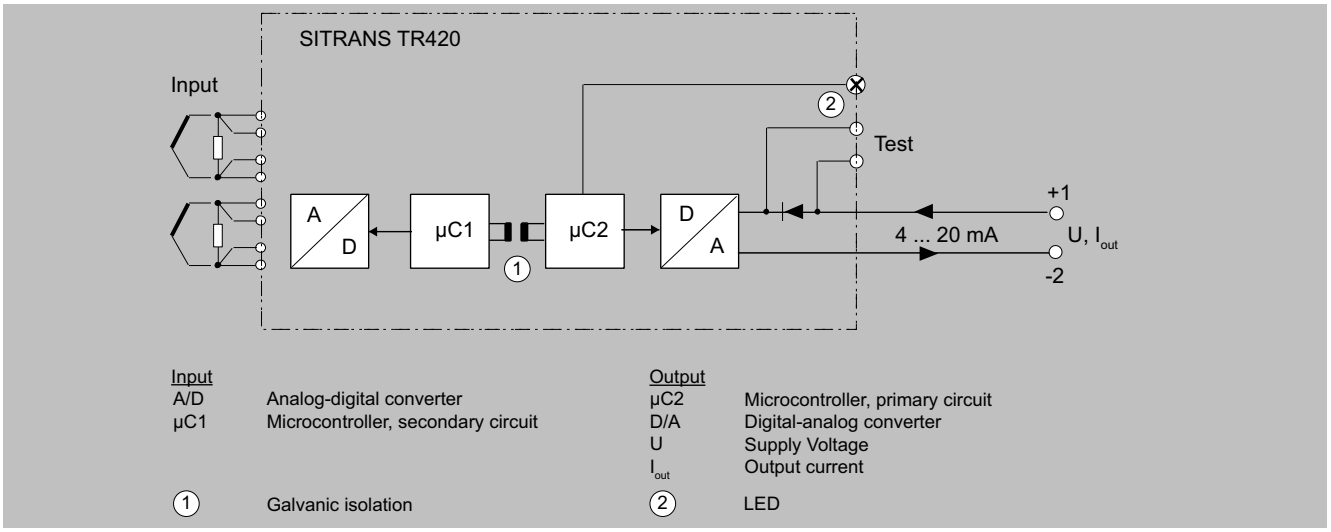
- 2 resistance thermometers (2-wire, 3-wire, 4-wire connection)
- 2 thermocouples
- 2 linear resistors, potentiometer and DC voltage sources

The output signal is a load-independent direct current from 4 to 20 mA in accordance with the input characteristic, superimposed by the digital HART signal.

The dual input mode also supports drift detection of the inputs, whereby maintenance intervals can be more easily planned.

Transmitters of the "intrinsically safe or Zone 2 increased safety" type of protection can be installed in hazardous areas. The device meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals.

© Siemens AG 2024



## Function

The SITRANS TR420 is configured via HART. The configuration can be carried out using a handheld communicator or, more conveniently, with a HART modem and the SIMATIC PDM configuration software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

After correct connection of input and supply voltage, the transmitter outputs a temperature-linear output signal and the diagnostics LED is green. In case of external errors, e.g. sensor short circuit or interruption, the LED flashes red; an internal error is indicated by a permanent red light.

An ammeter can be connected at any time for checking and plausibility via the test terminals. The output current can be read without any interruption, or even without opening the current loop.

| **Device settings** | |
| Measuring range setting temperature input: Lower range value (max. 5 characters), upper range value (max. 5 characters), unit (°C, °F, °Ra, K) | **Y01** |
| Customer-specific programming in plain text (n-lines) | **Y09** |
| Tag (device parameters, max. 32 characters), adhesive label | **Y15** |
| Measuring point description (device parameters, max. 32 characters), adhesive label | **Y16** |
| Descriptor (device parameters, max. 16 characters), adhesive label | **Y18** |
| Input 1: RTD factor; e.g. factor "200" = Pt200, adhesive label | **Y21** |
| Input 2: RTD factor (e.g. factor "200" - RTD Pt200), adhesive label | **Y22** |
| Fault current for input circuit short-circuit & interruption instead of 22.4 mA (short-circuit) and 22.8 mA (interruption) e.g. 3.6 mA and 22.4 mA [3.6 - 3.6; 3.6 - 22.8; 22.4 - 3.6] | **Y31** |
| CvD Sensor matching factors input 1 R0, A, B, C, Beta, Delta Selection: CVDR - R0 (format for example 100.0), CVDA - A (format for example 0.003908), CVDB - B (format for example -5.775E-07), CVDC - C (format for example -4.183E-12) | **Y35** |
| CvD Sensor matching factors input 2 R0, A, B, C, Beta, Delta Selection: CVDR - R0 (format for example 100.0), CVDA - A (format for example 0.003908), CVDB - B (format for example -5.775E-07), CVDC - C (format for example -4.183E-12) | **Y36** |
| Wire resistance value input 1 in ohms (0 ... 100 ohms) | **Y51** |

## Selection and ordering data (continued)

| Options<br>Add "-Z" to article number, specify order code and, if applicable, free text | Order code |
|---|---|
| Wire resistance value input 2 in ohms (0 ... 100 ohms) | **Y52** |
| Input 1: CJC sensor, fixed value (see measuring range for unit) | **Y60** |
| Input 2: CJC sensor, fixed value (see measuring range for unit) | **Y61** |
| ID number of special design | **Y99** |

***Accessories***

| | Article No. |
|---|---|
| Other accessories for assembly, connection and transmitter configuration, see page 2/198. | |
| **Modem** | |
| HART modem with USB interface | **7MF4997-1DB** |
| **SIMATIC PDM parameterization software** | See Catalog FI 01 section 8 |

***Ordering example***

7NG0420-0BA00-0AA0-Z Y01
Y01: -10 ... +100 °C

***Factory setting***

- Input 1: Pt100 (IEC 751; 3-wire connection)
- Input 2: not configured (inactive)
- Measuring range: 0 ... 100 °C (32 ... 212 °F)
- Fault current
  - Device fault: < 3.6 mA
  - Input circuit wire break: 22.8 mA
  - Input circuit short-circuit: 22.4 mA
  - Input circuit drift: 22 mA (active when input 2 is active)
  - Input monitoring wire break and short-circuit
- No trimming of input and output (offset)
- Damping 0.0 s

## Technical specifications

| SITRANS TR420 (HART, universal) | |
|---|---|
| **General** | |
| Supply voltage[1) 2)] | |
| • Without explosion protection (non-Ex) | 7.5 ... 48 V DC |
| • With explosion protection (Ex i) | 7.5 ... 30 V DC |
| Additional minimum supply voltage when using test terminals | 0.8 V |
| Maximum power loss | ≤ 850 mW |
| Minimum load resistance at supply voltage > 37 V | ($V_{supply}$ - 37 V)/23 mA |
| Insulation voltage, test/operation | |
| • Without explosion protection (non-Ex) | 2.5 kV AC/55 V AC |
| • With explosion protection (Ex i) | 2.5 kV AC/42 V AC |
| Polarity protection | All inputs and outputs |
| Write protection | Wire jumpers or software |
| Warm-up time | < 5 min |
| Starting time | < 2.75 s |
| Programming | SIPROM T and HART |
| Signal-to-noise ratio | > 60 dB |
| Long-term stability | Better than:<br>• ± 0.05% of measuring span/year<br>• ± 0.18% of measuring span/5 years |
| Response time | ≤ 75 ms (typically 70 ms) |
| Programmable damping | 0 ... 60 s |
| Signal dynamic | |
| • Input | 24 bit |
| • Output | 18 bit |
| Influence of change in supply voltage | < 0.005% of measuring span/V DC |
| **Input** | |
| ***Resistance thermometer (RTD)*** | |
| Input type | |
| • Pt10 ... 10000 | • IEC 60751<br>• JIS C 1604-8<br>• GOST 6651_2009<br>• Callendar Van Dusen |
| • Ni10 ... 10000 | • DIN 43760-1987<br>• GOST 6651-2009/OIML R84:2003 |
| • Cu5 ... 1000 | • Edison Copper Winding No. 15<br>• GOST 6651-2009/OIML R84:2003 |
| Connection type | 2-wire, 3-wire or 4-wire |
| Wire resistance per wire | Max. 50 Ω |
| Input current | < 0.15 mA |
| Effect of the wire resistance (with 3-wire and 4-wire connections) | < 0.002 Ω/Ω |
| Cable, wire-wire capacity | |
| • Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8) | Max. 30 nF |
| • All other input types | Max. 50 nF |
| Fault detection, programmable | None, short-circuited, defective, short-circuited or defective<br>**Note**<br>When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection. |
| Detection limit for short-circuited input | 15 Ω |
| Fault detection time (RTD) | ≤ 75 ms (typically 70 ms) |
| Fault detection time (for 3-wire and 4-wire) | ≤ 2 000 ms |
| ***Thermocouples (TC)*** | |

| SITRANS TR420 (HART, universal) | |
|---|---|
| Input type | |
| • B | IEC 60584-1 |
| • E | IEC 60584-1 |
| • J | IEC 60584-1 |
| • K | IEC 60584-1 |
| • L | DIN 43710 |
| • Lr | GOST 3044-84 |
| • N | IEC 60584-1 |
| • R | IEC 60584-1 |
| • S | IEC 60584-1 |
| • T | IEC 60584-1 |
| • U | DIN 43710 |
| • W3 | ASTM E988-96 |
| • W5 | ASTM E988-96 |
| • LR | GOST 3044-84 |
| Cold Junction Compensation (CJC) | Constant, internal or external over Pt100 or Ni100 RTD |
| • Temperature range internal CJC | -50 ... +100 °C (-58 ... +212 °F) |
| • Connection external CJC | 2-wire, 3-wire or 4-wire |
| • External CJC, wire resistance per wire (for 3-wire and 4-wire connections) | 50 Ω |
| • Effect of the wire resistance (with 3-wire and 4-wire connections) | < 0.002 Ω/Ω |
| • Input current external CJC | < 0.15 mA |
| • Temperature range external CJC | -50 ... +135 °C (-58 ... +275 °F) |
| • Cable, wire-wire capacity | Max. 50 nF |
| • Total wire resistance | Max. 10 kΩ |
| • Fault detection, programmable | None, short-circuited, defective, short-circuited or defective<br>**Note**<br>The short-circuited fault detection only applies to the CJC input. |
| • Fault detection time (TC) | ≤ 75 ms (typically 70 ms) |
| • Fault detection time, external CJC (for 3-wire and 4-wire) | ≤ 2 000 ms |
| ***Linear resistance*** | |
| Input range | 0 ... 100 kΩ |
| Minimum measuring span | 25 Ω |
| Connection type | 2-wire, 3-wire or 4-wire |
| Wire resistance per wire | Max. 50 Ω |
| Input current | < 0.15 mA |
| Effect of the wire resistance (with 3-wire and 4-wire connections) | < 0.002 Ω/Ω |
| Cable, wire-wire capacity | |
| • R > 400 Ω | Max. 30 nF |
| • R ≤ 400 Ω | Max. 50 nF |
| Fault detection, programmable | None, defective |
| ***Potentiometers*** | |
| Input range | 10 ... 100 kΩ |
| Minimum measuring span | 25 Ω |
| Connection type | 3-wire, 4-wire or 5-wire |
| Wire resistance per wire | Max. 50 Ω |
| Input current | < 0.15 mA |
| Effect of the wire resistance (with 4-wire and 5-wire connections) | < 0.002 Ω/Ω |

## Technical specifications (continued)

| SITRANS TR420 (HART, universal) | |
|---|---|
| Cable, wire-wire capacity | |
| • R > 400 Ω | Max. 30 nF |
| • R ≤ 400 Ω | Max. 50 nF |
| Fault detection, programmable | None, short-circuited, defective, short-circuited or defective<br>**Note**<br>When the configured potentiometer size is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection. |
| Detection limit for short-circuited input | 15 Ω |
| Fault detection time, wiper arm (no short-circuit detection) | ≤ 75 ms (typically 70 ms) |
| Fault detection time, element | ≤ 2 000 ms |
| Fault detection time (for 4-wire and 5-wire) | ≤ 2 000 ms |
| ***Voltage input*** | |
| Measuring range | |
| • Unipolar | -100 ... 1700 mV |
| • Bipolar | -800 ... +800 mV |
| Minimum measuring span | 2.5 mV |
| Input resistance | 10 MΩ |
| Cable, wire-wire capacity | |
| • Input range: -100 ... 1700 mV | Max. 30 nF |
| • Input range: -20 ... 100 mV | Max. 50 nF |
| Fault detection, programmable | None, defective |
| Fault detection time | ≤ 75 ms (typically 70 ms) |
| **Output and HART communication** | |
| Normal range, programmable | 3.8 ... 20.5 mA/20.5 ... 3.8 mA |
| Extended range (output limits), programmable | 3.5 ... 23 mA/23 ... 3.5 mA |
| Programmable input/output limits | |
| • Fault current | Enable/disable |
| • Fault current setting | 3.5 ... 23 mA |
| Update time | 10 ms |
| Load (with current output) | ≤ ($V_{Supply}$ - 7.5)/0.023 Ω |
| Load stability | < 0.01% of measuring span/100 Ω (measuring span = currently selected range) |
| Input fault detection, programmable (detection of input short-circuits is ignored with TC and voltage inputs) | 3.5 ... 23 mA |
| NAMUR NE43 Upscale | > 21 mA |
| NAMUR NE43 Downscale | < 3.6 mA |
| HART protocol versions | HART 7 |
| **Measuring accuracy** | |
| Input accuracy | See "Input accuracy" table |
| Output accuracy | See "Output accuracy" table |
| **Operating conditions** | |
| Ambient temperature | -50 ... +85 °C (-58 ... +185 °F) |
| Ambient temperature for devices with functional safety | -40 ... +80 °C (-40 ... +176 °F) |
| Storage temperature | -50 ... +85 °C (-58 ... +185 °F) |
| Reference temperature for sensor calibration | 24 °C ±1.0 °C (75.2 °F ±1.8 °F) |
| Relative humidity | < 99% (no condensation) |
| Degree of protection | |
| • Transmitter enclosure | IP20 |
| • Terminals | IP20 |
| **Structural design** | |
| Weight | 122 g (0.27 lb) |
| Maximum core cross-section | 2.5 mm² (AWG 13) |

| SITRANS TR420 (HART, universal) | |
|---|---|
| Tightening torque for clamping screws | 0.5 ... 0.6 Nm |
| Vibrations | IEC 60068-2-6 |
| • 2 ... 25 Hz | ± 1.6 mm (0.07 inches) |

1) Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TR420. All external voltage drops must be taken into account.
2) Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.
3) Additional available certificates are listed on the internet at http://www.siemens.com/processinstrumentation/certificates

## Overview

SITRANS TF320 in dual chamber enclosure

## Overview (continued)

SITRANS TF320 in single chamber enclosure

- 2-wire temperature transmitter with and without HART communication interface
- Universal input for virtually any type of temperature sensor
- Can be configured via PC, HART 7 or optional local operation

© Siemens AG 2024

## Benefits

- Universally applicable as a temperature transmitter with galvanic isolation for:
  - Resistance thermometer (2-wire, 3-wire, 4-wire connection)
  - Thermocouples
  - Linear resistances, potentiometer and DC voltage sources
- Local operation of the temperature transmitter via display (single chamber enclosure) or control keys accessible from outside (dual chamber enclosure)
- Rugged single or dual chamber enclosure made of die-cast aluminum or stainless steel 316/316L
- Electronic compartment isolated (watertight) from terminal compartment in dual chamber enclosure
- Degree of protection IP66/68 (1.5 m/2 h)
- Electromagnetic compatibility according to EN 61326 and NE21
- Test terminals for direct read-out of the output signal without breaking the current loop
- Remote installation option:
  - Measuring point is difficult to access
  - Measuring point is subjected to high temperatures
  - Measuring point is subjected to vibration through plant
  - Long neck pipes and thermowells must be avoided
- Temperature transmitters of the "intrinsically safe protection type, increased safety for zone 2, flameproof and dust-protected" type of protection can be installed in hazardous areas. The transmitter meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals, e.g. EACEx, NEPSI, KCs, Inmetro.
- SIL2/3 (with order note C20) according to IEC 61508 and Electrical Equipment For Furnaces And Ancillary Equipment (EN 50156-2)

## Application

SITRANS TF320 can be used everywhere where temperatures need to be measured under particularly adverse conditions and where a user-friendly local display is ideal. Which is why users from all industries have opted for this field device. The rugged enclosure protects the electronics. The stainless steel model is almost completely resistant to sea water and other aggressive substances. The inner workings offer high measuring accuracy, universal input and a wide range of diagnostic options.

© Siemens AG 2024

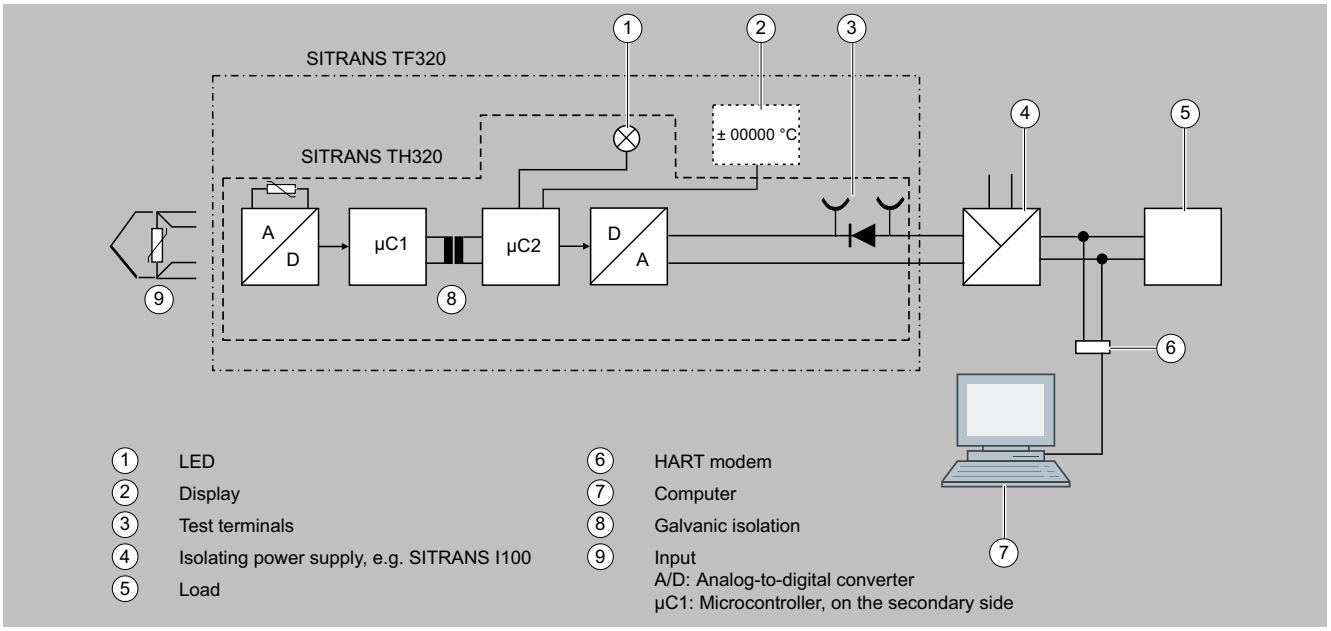
## Function

***Configuration***

The communication capability over the HART protocol V 7 permits parameterization using a PC or HART communicator (hand-held communicator). The SIMATIC PDM makes it easy.

For the SITRANS TF320 without HART functionality, parameters are assigned with the PC. A special modem and the software tool SIPROM T are available for this purpose.

The optional local operation on the device gives you the possibility to configure the device's most important functions very quickly.



***Principle of operation***

SITRANS TF320 as temperature transmitter

The input signal, whether resistance thermometer (RTD), thermocouple (TC), Ω or mV signal, is amplified and linearized. Input and output side are galvanically isolated. An internal cold junction is integrated for measurements with thermocouples.

The device outputs a temperature-linear direct current from 4 to 20 mA. As well as the analog transmission of measured values from 4 to 20 mA, the HART version also supports digital communication for online diagnostics, measured value transmission, and configuration.

SITRANS TF320 automatically detects when a sensor should be interrupted or is indicating a short-circuit. The practical test terminals allow direct measurement of 4 to 20 mA signals over an ammeter without interrupting the output current loop.

SITRANS TF320 (single chamber enclosure)

7NG0340-0BA01-0AF2-Z Y01+Y17+P10

Y01: -10 ... +100 °C

Y17: TICA123

***Factory setting***

- Pt100 (IEC 60751) in 3-wire connection
- Measuring range: 0 ... 100 °C (32 ... 212 °F)
- Fault current
  - Input circuit wire break: 22.8 mA
  - Input circuit short-circuit: 22.4 mA
  - Input monitoring wire break and short-circuit
- No trimming of input and output (offset)
- Damping 0.0 s

## Technical specifications

| SITRANS TF320 (HART, universal) | |
|---|---|
| **General** | |
| Supply voltage[1) 2)] | |
| • Without explosion protection (non-Ex) | 10.5 ... 48 V DC |
| • With explosion protection (Ex i) | 10.5 ... 30 V DC |
| Additional minimum supply voltage when using test terminals | 0.8 V |
| Maximum power loss | ≤ 850 mW |
| Minimum load resistance at supply voltage > 37 V | ($V_{supply}$ - 37 V)/23 mA |
| Insulation voltage, test/operation | |
| • Without explosion protection (non-Ex) | 2.5 kV AC/55 V AC |
| • With explosion protection (Ex i) | 2.5 kV AC/42 V AC |
| Polarity protection | All inputs and outputs |
| Write protection | Wire jumper (transmitter), switch (on display) or software |
| Warm-up time | < 5 min |
| Starting time | < 2.75 s |
| Programming | SIPROM T and HART |
| Signal-to-noise ratio | > 60 dB |
| Long-term stability | Better than:<br>• ± 0.05% of measuring span/year<br>• ± 0.18% of measuring span/5 years |
| Response time | 4 ... 20 mA: ≤ 55 ms<br>HART: ≤ 75 ms (typically 70 ms) |
| Programmable damping | 0 ... 60 s |
| Signal dynamic | |
| • Input | 24 bit |
| • Output | 18 bit |
| Influence of change in supply voltage | < 0.005% of measuring span/V DC |
| **Input** | |
| ***Resistance thermometer (RTD)*** | |
| Input type | |
| • Pt10 ... 10000 | • IEC 60751<br>• JIS C 1604-8<br>• GOST 6651_2009<br>• Callendar-Van Dusen |
| • Ni10 ... 10000 | • DIN 43760-1987<br>• GOST 6651-2009/OIML R84:2003 |
| • Cu5 ... 1000 | • Edison Copper Winding No. 15<br>• GOST 6651-2009/OIML R84:2003 |
| Connection type | 2-wire, 3-wire or 4-wire |
| Wire resistance per wire | Max. 50 Ω |
| Input current | < 0.15 mA |
| Effect of the wire resistance (with 3-wire and 4-wire connections) | < 0.002 Ω/Ω |
| Cable, wire-wire capacity | |
| • Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8) | Max. 30 nF |
| • All other input types | Max. 50 nF |
| Fault detection, programmable | None, short-circuited, defective, short-circuited or defective<br>**Note**<br>When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection. |
| Detection limit for short-circuited input | 15 Ω |
| Fault detection time (RTD) | ≤ 75 ms (typically 70 ms) |
| Fault detection time (for 3-wire and 4-wire) | ≤ 2 000 ms |
| ***Thermocouples (TC)*** | |

## Overview

SITRANS TF420 in dual chamber enclosure

## Overview (continued)

SITRANS TF420 in single chamber enclosure

- 2-wire temperature transmitter with HART communication interface
- Universal input for virtually any type of temperature sensor
- Connection of two independent input circuits for redundant operation (high input availability)
- Input drift detection
- Can be configured via PC, HART 7 or optional local operation

© Siemens AG 2024

## Benefits

- Universally applicable as a temperature transmitter with galvanic isolation for:
  - Resistance thermometer (2-wire, 3-wire, 4-wire connection)
  - Thermocouples
  - Linear resistances, potentiometer and DC voltage sources
- Local operation of the temperature transmitter via display (single chamber enclosure) or control keys accessible from outside (dual chamber enclosure)
- Rugged single or dual chamber enclosure made of die-cast aluminum or stainless steel 316/316L
- Electronic compartment isolated (watertight) from terminal compartment in dual chamber enclosure
- Degree of protection IP66/68 (1.5 m/2 h)
- Electromagnetic compatibility according to EN 61326 and NE21
- Test terminals for direct read-out of the output signal without breaking the current loop
- Remote installation option:
  - Measuring point is difficult to access
  - Measuring point is subjected to high temperatures
  - Measuring point is subjected to vibration through plant
  - Long neck pipes and thermowells must be avoided
- Temperature transmitters of the "intrinsically safe protection type, increased safety for zone 2, flameproof and dust-protected" type of protection can be installed in hazardous areas. The transmitter meets the requirements of the EU Directive 2014/34/EU (ATEX), the FM and CSA regulations as well as other national approvals, e.g. EACEx, NEPSI, KCs, Inmetro.
- SIL2/3 (with order note C20) according to IEC 61508 and Electrical Equipment For Furnaces And Ancillary Equipment (EN 50156-2)

## Application

SITRANS TF420 with its two sensor inputs can be used everywhere where temperatures need to be measured without interruption under particularly adverse conditions and where a convenient local display is ideal. Which is why users from all industries have opted for this field device. The rugged enclosure protects the electronics. The stainless steel model is almost completely resistant to sea water and other aggressive substances. The inner workings offer high measuring accuracy, universal input and a wide range of diagnostic options.

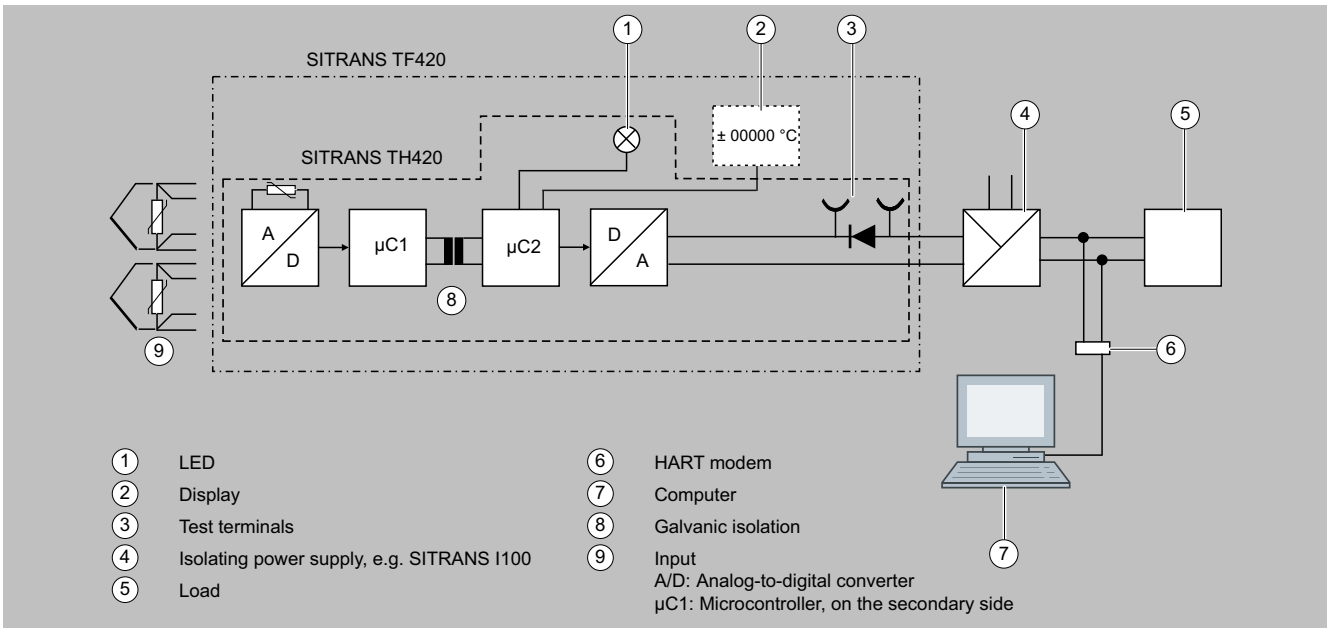
© Siemens AG 2024

## Function

***Configuration***

The communication capability over the HART protocol V 7 permits parameterization using a PC or HART communicator (hand-held communicator). The SIMATIC PDM makes it easy.

The optional local operation on the device gives you the possibility to configure the device's most important functions very quickly.



***Principle of operation***

SITRANS TF420 as temperature transmitter

Two sensor signals, whether resistance thermometers (RTD), thermocouples (TC), Ω or mV signals, are amplified and linearized. Input and output side are galvanically isolated. An internal cold junction is integrated for measurements with thermocouples.

The device outputs a temperature-linear direct current from 4 to 20 mA. As well as the analog transmission of measured values from 4 to 20 mA, the HART version also supports digital communication for online diagnostics, measured value transmission, and configuration.

SITRANS TF420 automatically detects when a sensor should be interrupted or is indicating a short-circuit. If the back-up functionality has been selected in the primary value display, the SITRANS TF420 automatically switches to the 2nd input without interrupting the measured value; e.g. primary value input 1 with input 2 as backup. The practical test terminals allow direct measurement of 4 to 20 mA signals over an ammeter without interrupting the output current loop.

***Ordering example***

SITRANS TF420 (single chamber enclosure)

7NG0450-0BA02-0AF2-Z Y01+Y17+P10

Y01: -10 ... +100 °C (32 ... 212 °F)

Y17: TICA123

***Factory setting***

- Input 1: Pt100 (IEC 751); 3-wire connection
- Input 2: not configured (inactive)
- Measuring range: 0 ... 100 °C (32 ... 212 °F)
- Fault current
  - Input circuit wire break: 22.8 mA
  - Input circuit short-circuit: 22.4 mA
  - Input circuit drift: 22 mA (active when input 2 is active)
  - Input monitoring wire break and short-circuit
- No trimming of input and output (offset)
- Damping 0.0 s

## Technical specifications

| SITRANS TF420 (HART, universal) | |
|---|---|
| **General** | |
| Supply voltage[1) 2)] | |
| • Without explosion protection (non-Ex) | 10.5 ... 48 V DC |
| • With explosion protection (Ex i) | 10.5 ... 30 V DC |
| Additional minimum supply voltage when using test terminals | 0.8 V |
| Maximum power loss | ≤ 850 mW |
| Minimum load resistance at supply voltage > 37 V | ($V_{supply}$ - 37 V)/23 mA |
| Insulation voltage, test/operation | |
| • Without explosion protection (non-Ex) | 2.5 kV AC/55 V AC |
| • With explosion protection (Ex i) | 2.5 kV AC/42 V AC |
| Polarity protection | All inputs and outputs |
| Write protection | Wire jumper (transmitter), switch (on display) or software |
| Warm-up time | < 5 min |
| Starting time | < 2.75 s |
| Programming | HART |
| Signal-to-noise ratio | > 60 dB |
| Long-term stability | Better than:<br>• ± 0.05% of measuring span/year<br>• ± 0.18% of measuring span/5 years |
| Response time | 4 ... 20 mA: ≤ 55 ms<br>HART: ≤ 75 ms (typically 70 ms) |
| Programmable damping | 0 ... 60 s |
| Signal dynamic | |
| • Input | 24 bit |
| • Output | 18 bit |
| Influence of change in supply voltage | < 0.005% of measuring span/V DC |
| **Input** | |
| ***Resistance thermometer (RTD)*** | |
| Input type | |
| • Pt10 ... 10000 | • IEC 60751<br>• JIS C 1604-8<br>• GOST 6651_2009<br>• Callendar-Van Dusen |
| • Ni10 ... 10000 | • DIN 43760-1987<br>• GOST 6651-2009/OIML R84:2003 |
| • Cu5 ... 1000 | • Edison Copper Winding No. 15<br>• GOST 6651-2009/OIML R84:2003 |
| Connection type | 2-wire, 3-wire or 4-wire |
| Wire resistance per wire | Max. 50 Ω |
| Input current | < 0.15 mA |
| Effect of the wire resistance (with 3-wire and 4-wire connections) | < 0.002 Ω/Ω |
| Cable, wire-wire capacity | |
| • Pt1000, Pt10000 (IEC 60751 and JIS C 1604-8) | Max. 30 nF |
| • All other input types | Max. 50 nF |
| Fault detection, programmable | None, short-circuited, defective, short-circuited or defective<br>**Note**<br>When the low limit for the configured input type is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection. |
| Detection limit for short-circuited input | 15 Ω |
| Fault detection time (RTD) | ≤ 75 ms (typically 70 ms) |
| Fault detection time (for 3-wire and 4-wire) | ≤ 2 000 ms |
| ***Thermocouples (TC)*** | |

| SITRANS TF420 (HART, universal) | |

| • R > 400 Ω | Max. 30 nF |
| • R ≤ 400 Ω | Max. 50 nF |
| Fault detection, programmable | None, short-circuited, defective, short-circuited or defective<br>**Note**<br>When the configured potentiometer size is below the constant detection limit for short-circuited inputs, the detection of short circuits is disabled regardless of the configuration of the fault detection. |
| Detection limit for short-circuited input | 15 Ω |
| Fault detection time, wiper arm (no short-circuit detection) | ≤ 75 ms (typically 70 ms) |
| Fault detection time, element | ≤ 2 000 ms |
| Fault detection time (for 4-wire and 5-wire) | ≤ 2 000 ms |
| ***Supply voltage*** | |
| Measuring range | |
| • Unipolar | -100 ... 1700 mV |
| • Bipolar | -800 ... +800 mV |
| Minimum measuring span | 2.5 mV |
| Input resistance | 10 MΩ |
| Cable, wire-wire capacity | |
| • Input range: -100 ... 1700 mV | Max. 30 nF |
| • Input range: -20 ... 100 mV | Max. 50 nF |
| Fault detection, programmable | None, defective |
| Fault detection time | ≤ 75 ms (typically 70 ms) |
| **Output and HART communication** | |
| Normal range, programmable | 3.8 ... 20.5 mA/20.5 ... 3.8 mA |
| Extended range (output limits), programmable | 3.5 ... 23 mA/23 ... 3.5 mA |
| Programmable input/output limits | |
| • Fault current | Enable/disable |
| • Fault current setting | 3.5 ... 23 mA |
| Update time | 10 ms |
| Load (with current output) | ≤ ($V_{Supply}$ - 10.5)/0.023 Ω |
| Load stability | < 0.01% of measuring span/100 Ω (measuring span = currently selected range) |
| Input fault detection, programmable (detection of input short-circuits is ignored with TC and voltage inputs) | 3.5 ... 23 mA |
| NAMUR NE43 Upscale | > 21 mA |
| NAMUR NE43 Downscale | < 3.6 mA |
| HART protocol versions | HART 7 |
| **Measuring accuracy** | |
| Input accuracy | See "Input accuracy" table |
| Output accuracy | See "Output accuracy" table |
| **Operating conditions** | |
| Ambient temperature | |
| • Without local operation in single chamber enclosure | -50 ... +85 °C (-58 ... +185 °F) |
| • With local operation | -40 ... +85 °C (-40 ... +185 °F) |
| • For transmitters with functional safety | -40 ... +80 °C (-40 ... +176 °F) |
| Storage temperature | -50 ... +85 °C (-58 ... +185 °F) |
| Reference temperature for sensor calibration | 24 °C ±1.0 °C (75.2 °F ±1.8 °F) |
| Relative humidity | < 99% (no condensation) |
| Degree of protection | |
| • Temperature transmitter enclosure | IP66/IP68 |
| • Terminals | IP00 |

1) Note that the minimum supply voltage must correspond to the value measured at the terminals of the SITRANS TF420. All external voltage drops must be taken into account.
2) Protect the device from overvoltage with the help of a suitable power supply or suitable overvoltage protection equipment.
3) Additional available certificates are listed on the internet at http://www.siemens.com/processinstrumentation/certificates

## Overview

| SITRANS FM electromagnetic flowmeters – Pulsed DC magnetic flowmeter | Application | Description | Software for parameterization |
|---|---|---|---|
| **MAG 5000/6000 transmitter**<br>  | Designed in robust IP67 polyamide enclosures for compact or remote mounting.<br>19", back of panel and front of panel enclosure program. | • Superior signal resolution for optimum turn down ratio<br>• Comprehensively self-diagnostic, for error indication and logging<br>• Multi-lingual display and keypad interface<br>• Communication modules: HART, Modbus, PROFIBUS, FOUNDATION Fieldbus, DeviceNet<br>• Custody transfer approval: MI-001, PTB K7.2 | SIMATIC PDM |
| **MAG 6000 I/6000 I Ex transmitter**<br>  | Designed in robust die-cast aluminum enclosure for demanding applications and where explosion proof protection is necessary. | • Remote and compact mounting with all sensors<br>• Communication modules: HART, Modbus, PROFIBUS, FOUNDATION Fieldbus, DeviceNet<br>• Ex Approval: ATEX, IECEx, FM, CSA<br>• Multi-lingual display and touchpad keypad<br>• Comprehensive self-diagnostic | SIMATIC PDM |
| **FMT020 transmitter**<br>  | High performance, robust and intelligent product, designed to fit perfectly for a wide area of process applications that require accurate, and reliable flow measurement of conductive fluids. | • High accuracy up to 0.2% of rate<br>• 3 totalizers for forward, reverse, and net flow<br>• Backwards compatible with older (up to 15 years) flow meter sensors (MAG 5100W)<br>• Fast start-up without zero-point adjustments<br>• Variety of functions for comprehensive device check, self-diagnosis, and onboard verification<br>• Verificator compatible - Independently verifies performance of sensor, transmitter, and installation (including cable) without process interruption<br>• Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications<br>• Multi-functional outputs for process control, minimum configuration with analog, digital (pulse, frequency, status), and relay output<br>• SD memory card for data logging, configuration backup, and firmware update<br>• Seamless field device integration in host systems | SIMATIC PDM |

## Overview (continued)

| SITRANS FM electromagnetic flowmeters – Pulsed DC magnetic flowmeter | Application | Description | Software for parameterization |
|---|---|---|---|
| **MAG 1100 and MAG 1100 HT flow sensors**  | Designed for the general industry environment.<br>The obstructionless performance of the MAG 1100 is unaffected by the suspended solids, viscosity and temperature challenges. | • Metering tube DN 2 ... 100 (1/12 ... 4") flangeless design<br>• Corrosion-resistant AISI 316 stainless steel housing<br>• Highly resistant liner (ceramic or PFA) and electrodes fitting most extreme process media<br>• Temperature rating up to 200 °C (390 °F)<br>• Ex approval: ATEX, FM | |
| **MAG 1100 F flow sensor**  | Specially designed for the food & beverage and pharmaceutical industry. | • AISI 316 stainless steel enclosure<br>• Hygienic seal, 3A<br>• Easy to clean<br>• Supplied with connections according to your specification<br>• Ex approval: ATEX, FM | |
| **MAG 3100 and MAG 3100 HT flow sensors**  | The MAG 3100 series with its flexibility in the choice of liner, electrode and flange material allows the measurement of even the most extreme process media. | • For a wide range of pipe dimensions: DN 15 ... 2200 (½" ... 88")<br>• Wide range of liner and electrode materials<br>• High-temperature version for application with temperatures up to 180 °C (355 °F)<br>• High-pressure solutions | |
| **MAG 3100 P flow sensor**  | The SITRANS FM MAG 3100 P sensor is designed to meet the most common specifications within the chemical and process industries. | • For pipe dimensions DN 15 ... 300 (½" ... 12")<br>• Fully welded construction that is extremely rugged and can withstand special process conditions using extreme measurement electrodes<br>• Approvals for hazardous areas: ATEX, FM, CSA, IECEx<br>• Comprehensive self-diagnostic for error indication and error logging<br>• Temperature resistant up to 150 °C (302 °F) | |

## Overview (continued)

| SITRANS FM electromagnetic flowmeters – Pulsed DC magnetic flowmeter | Application | Description | Software for parameterization |
|---|---|---|---|
| **MAG 5100 W flow sensor**<br>  | Designed for all water and wastewater applications in water plants and industrial applications. | • Metering tube DN 15 ... 2000 (½" ... 80")<br>• Hard Rubber or EPDM lining<br>• Integral grounding electrodes as standard<br>• Increased low flow accuracy for water leak detection<br>• Drinking water approvals and custody transfer approvals , OIML R 49, MI-001 and PTB K7.2 | |
| **FMS500 flow sensor**<br>  | Magnetic flow meter sensor suitable for volume flow measurement of liquids (conductive) and is the ideal product for applications in water abstraction, wastewater treatment, water distribution networks, and irrigation. | • Zero Up and Zero Down installation capabilities<br>• NBR rubber liner for all water and wastewater applications<br>• EPDM liner specifically for drinking water applications requiring special approvals<br>• Soft elastomer facing provides high abrasion resistance<br>• Increased low flow accuracy for water leak detection<br>• Rugged construction with no moving parts for maintenance-free operation over many years<br>• Simple on-site upgrade to IP68 of a standard sensor allowing underground installation, permanent immersion or underwater installation<br>• Integrated grounding electrodes – no grounding rings required for many applications<br>• Short delivery time<br>• Built-in length according to ISO 20456 (up to DN 400 mm)<br>• SENSORPROM™ Technology provides an automatic upload of start-up settings and calibration data for easy commissioning<br>• Designed to allow in-situ verification for easy performance check<br>• In conformity with ISO 4064, OIML R49 and EN 14154 | |
| **FM100 flowmeter**<br>  | The SITRANS FM100 is an electromagnetic flowmeter for measuring and monitoring small and medium flows. | • Connection ½", ¾", 1", 2"<br>• Flow- and temperature measurement<br>• IO-Link communication<br>• Dosing function with external control output<br>• Flexible usage in different applications due to two individual configurable outputs<br>• Bidirectional measurement<br>• Robust stainless-steel design | |

## Overview (continued)

| SITRANS FM electromagnetic flowmeters – High-power AC magnetic flowmeter | Application | Description | Software for parameterization |
|---|---|---|---|
| **TRANSMAG 2 transmitter**  | Designed for heavy-duty applications like pulp & paper stock over 3%; heavy mining slurries and mining slurries with magnetic particles. | • Magnetic flowmeter with a very strong pulsed AC magnetic field<br>• PROFIBUS PA or HART communication<br>• Comprehensive self-test function | SIMATIC PDM |
| **MAG 911/E flow sensor**  | Designed for heavy-duty applications like pulp & paper stock over 3%; heavy mining slurries and mining slurries with magnetic particles. | • Metering tube: DN 15 ... 1000 (½" ... 40")<br>• Metering tube liner: Hard Rubber, Linatex, Soft rubber, PTFE and Novolak<br>• Integral smartPLUG for storing of calibration values<br>• Multi-lingual display and touchpad keypad<br>• Only remote version | |

| SITRANS FM electromagnetic flowmeters – Battery-operated magnetic water meter | Application | Description | Software for parameterization |
|---|---|---|---|
| **MAG 8000 water meter**  | Battery-operated electromagnetic water meter for water applications within abstraction, distribution network and revenue metering. | • Battery- and/or mains power operated water meter<br>• Metering tube DN 25 ... 1200 (1 ... 48")<br>• Remote and compact installation IP68/NEMA 6P enclosure<br>• Custody transfer approval: PTB K7.2, OIML R 49 and MI-001<br>• Drinking water approvals<br>• Communication modules: GSM/GPRS, Modbus, Encoder | SIMATIC PDM and Flow Tool |

| SITRANS FC mass flowmeters | Application | Description | Software for parameterization |
|---|---|---|---|
| **FC330 flowmeters (dual tube design)**  | Designed for a variety of liquid and gas applications in the Process Industry. Measurement of mass flow, density, temperature and fraction. | • DN 15, DN 25, DN 50, DN 80, DN 100 and DN 150<br>• Flow from 70 ... 860 000 kg/h - water<br>• Pipe material: AISI 316L or Nickel-Alloy C4<br>• Accuracy, typically: Flow: ≤ 0.1 % or 0.2 % version, Density: down to ≤ 0.002 g/cm³<br>• Liquid temperature/pressure: -50 ... +205 °C (-58 ... +400 °F)/up to 100 bar (1450 psi)<br>• Approvals: ATEX, IECEx, cCSAus, CRN, PED (depending on configuration) | |

## Overview (continued)

| SITRANS FC mass flowmeters | Application | Description | Software for parameterization |
|---|---|---|---|
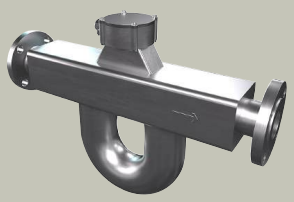
| **MASS 2100 and FC300 flowmeter with transmitter FCT010 or FCT030 (single tube design)**<br>  <br>  | Designed for low flow applications | • MASS 2100: DI 1.5, DI 3, DI 6, DI 15<br>• FC300: DN 4<br>• Flow from 0.1 ... 5600 kg/h<br>• Pipe material: Stainless steel AISI 316L/ 1.4435; Hastelloy C22/2.4602<br>• Accuracy, typically:<br>- Flow: down to 0.1 %<br>- Density: down to 0.0005 g/cm³<br>• Liquid temp./pressure: -50 ... +180 °C (-58 ... +356 °F); up to 410 bar (5946 psi)<br>• Approvals: ed according to ATEX, IECEx, c-UL-us, CRN, PED | |
| **SITRANS FCT070 transmitter**<br>  | SITRANS FCT070 can be connected to all Coriolis type Sensors FCS300, FCS400, MASS 2100 and FC300 DN. FCT070 can be used for machine builders and in the process industry plants. The meters are suitable for measuring on liquid and gas. With ET 200SP ST & HF the SITRANS FCT070 can be installed decentralized in small stations, with fast communication to the control room.<br>The faceplates for TIA-Portal and PCS 7 offer the direct full remote access to the flowmeter. | • Easy integration into automation process control as TIA Portal and PCS 7<br>• Cost effective integration of Coriolis flowmeters for PLC controlled machines<br>• SITRANS FCT070 is a ET 200SP technology module and can combined with all other SIMATIC ET 200S SP ST & HF modules<br>• Fast and trouble-free communication between the flowmeter and the PLC through digital data communication with up to 10 ms update rate<br>• ATEX Zone 2 FM Class 1 Div 2 approvals<br>• Included advanced batch functionality without additional modules | |

| SITRANS FC Coriolis 2023 | Application | Description | Software for parameterization |
|---|---|---|---|
| **FC120/FC140 flowmeter system**<br>  | The flowmeter systems of the SITRANS FC100 series are the precision Coriolis multi-parameter flowmeter for low flow applications. | • Batching function with batch leakage detection and batch control by transmitter for precise dosing<br>• Accurate density measurement and up to four advanced concentration measurement data sets<br>• Sizes to suit pilot plants, R&D labs and high value fluid additives<br>• Wide choice of process connections, starting with DN 6 (¼ inch) for reduced installation efforts | |

© Siemens AG 2024



## Overview (continued)

| SITRANS FC Coriolis 2023 | Application | Description | Software for parameterization |
|---|---|---|---|
| **FC520/FC540 flowmeter system**<br>  | The flowmeter systems of the SITRANS FC500 series are the universal Coriolis multi-parameter flowmeter for routine and hygienic applications. | • Energy-efficient low pressure loss design with short tube paths and large tube diameter<br>• Batching function with batch leakage detection and batch control by transmitter for precise dosing<br>• Accurate density measurement and up to four advanced Concentration Measurement data sets<br>• Benefit from viscosity function and capability to handle high viscous process fluids<br>• Hygienic design, self-draining in vertical installation, with hygienic approval options | |
| **FC620/FC640 flowmeter system**<br>  | The flowmeter systems of the SITRANS FC600 series are the resistant Coriolis multi-parameter flowmeter for extreme conditions. | • Temperatures from -196 °C (-321 °F), for cryogenic fluids, up to +350 °C (+662 °F)<br>• Insulation and heat tracing options for viscous and molten liquids<br>• Dynamic pressure compensation for accurate measurement under changing process pressure<br>• Accurate density measurement and up to four advanced concentration measurement data sets | |
| **FC720/FC740 flowmeter system**<br>  | The flowmeter systems of the SITRANS FC500 series are the grande Coriolis multi-parameter flowmeter for large pipes and high flows. | • Energy-efficient low pressure loss design with short tube paths and large tube diameter<br>• Optimal decoupling of the dual tube measuring element from external stress and vibration<br>• Accurate density measurement and up to four advanced concentration measurement data sets<br>• Benefit from viscosity function and capability to handle high viscous process fluids<br>• High power tube driver to detect gas content to maintain dependable measurements with entrained gas | |
| **FCT020 transmitter**<br>  | FCT020 is the standard transmitter, suitable for general purpose applications. It delivers accurate and precise measurements of mass flow rate, density, temperature and volume flow rate. | • Tube health check<br>• Communicaion modules: HART, Modbus | |

© Siemens AG 2024

## Overview (continued)

| SITRANS FC Coriolis 2023 | Application | Description | Software for parameterization |
|---|---|---|---|
| **FCT040 transmitter**<br>  | FCT040 is the advanced transmitter, offering a wider range of application solutions with improved performance. | • Tube health check<br>• Standard concentration measurement<br>• Petroleum measurement function<br>• Fraction (advanced concentration)<br>• Viscosity function<br>• Batching function<br>• Communicaion modules: HART, Modbus, PROFIBUS, PROFINET | |
| **FCS100 sensor**<br>  | SITRANS FCS100 sensor is the precision Coriolis flow sensor for low flow applications. | • Install in tight spaces with no inlet and outlet restrictions<br>• Sizes to suit pilot plants, R&D labs, and high value fluid additives<br>• Combination with a remote transmitter via a connecting cable<br>• Installation of sensor and transmitter in different locations | |
| **FCS500 sensor**<br>  | SITRANS FCS500 sensor is the universal Coriolis flow sensor for routine and hygienic applications. | • Dual curved AISI 316L stainless steel tubes with polished option<br>• Hygienic approvals for food, beverage, and pharmaceutical sectors<br>• Versatile solution with superior turndown and low pressure loss<br>• Combination with compact or remote transmitters | |
| **FCS600 sensor**<br>  | SITRANS FCS600 sensor is the resistant Coriolis flow sensor for extreme conditions and corrosive fluids. | • Dual curved AISI 316L or alloy 22 tubes with optimum decoupling from external influences<br>• Temperatures from -196 °C (for cryogenic fluids), up to +350 °C<br>• Insulation and heat tracing options for viscous and molten liquids<br>• Combination with compact or remote transmitters | |
| **FCS700 sensor**<br>  | SITRANS FCS700 sensor is the grande Coriolis flow sensor for large pipes and high flows. | • Dual curved AISI 316L stainless steel or alloy 22 tubes with optimum decoupling from external influences<br>• Energy efficient low pressure loss design with short tube paths and large tube diameter<br>• High power tube driver for dependable measurements in high damping applications<br>• Combination with compact or remote transmitters | |

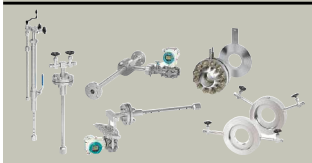
## Overview (continued)

| SITRANS FS clamp-on ultrasonic flowmeters | Application | Description | Software for parameterization |
|---|---|---|---|
| **SITRANS FS230**<br>  | SITRANS FS clamp-on ultrasonic flowmeters provide highly accurate measurement while minimizing installation time and maintenance expense. These dedicated flowmeters are suitable for a wide variety of liquid applications, including those in the:<br>• Water Industry<br>• Wastewater Industry<br>• HVAC Industry<br>• Power Industry<br>• Processing Industry<br>• Hydrocarbon Industry | • Suitable for virtually any liquid, even those with high aeration or suspended solids<br>• Hydrocarbon functions are ideal for applications carrying crude oil, refined petroleum or gas<br>• Choice of single, dual or four path versions to suit your operating conditions and requirements<br>• Easy installation; no need to cut pipe or stop flow<br>• Minimal maintenance; external sensors do not require periodic cleaning<br>• Easy to read display with intuitive menu system<br>• Hazardous area approvals for ATEX Zone 1,2, IECEx Zone 1,2 FMc Class I Div. 1,2 | |
| **SITRANS FS220**<br>  | SITRANS FS220 basic is a fast-to-install clamp-on ultrasonic flowmeter for accurate measurements with minimal maintenance. Based on latest technology, this flowmeter is ideal suitable for applications like:<br>• Water Industry<br>• Wastewater Industry<br>• HVAC Industry<br>• Power Industry<br>• Process controls | • Easy installation during process condition, no need to cut pipe or stop flow<br>• Minimal maintenance; external sensors do not require periodic cleaning<br>• No media-contacting parts, no wear, no pressure drop, no energy loss<br>• Wide turn-down ratio, very sensitive in low flow condition<br>• Optional WideBeam technology ensures high performance<br>• Compatible with all previously fielded transit time sensors | |
| **SITRANS FS290**<br>  | The portable clamp-on ultrasonic flow measurement system SITRANS FS290 is formed by the SITRANS FST090 portable clamp-on flowmeter with FSS200 sensors.<br>This system represents the next generation of digital flow measurement which allows you to easily measure or check flows in pipes. | • Easy installation: just clamp it on, with no need to cut pipe or stop flow<br>• Minimal maintenance: sensors do not require upkeep or cleaning<br>• No moving parts to foul or wear<br>• No pressure drop or energy loss<br>• Wide turn-down ratio<br>• Precise single path measuring | |
| **SITRANS FST070**<br>  | The technology module SITRANS FST070 is an ultrasonic clamp-on flowmeter transmitter for the SIMATIC ET200SP.<br>The SITRANS FST070 can be used for machine builders, in the chemical industry or water treatments and is suitable for measuring on liquid, hydrocarbon and gas | • Easy integration into automation process control as TIA Portal and PCS 7 (SIMATIC)<br>• Easy selection and integration of flowmeters via TIA selector<br>• Precast face plates for TIA Portal and PCS 7<br>• No additional transmitter between automation and clamp-on sensors required<br>• Cost effective integration of clamp-on flowmeters for water treatments, control rooms with PCS 7<br>• SITRANS FST070 ET 200SP technology module can combined with all other SIMATIC ET200 modules<br>• Fast and trouble-free communication between the flowmeter and the PLC through digital data communication with up to 10 ms update rate | |



© Siemens AG 2024

## Overview (continued)

| SITRANS FS clamp-on ultrasonic flowmeters | Application | Description | Software for parameterization |
|---|---|---|---|
| | | • ATEX Zone 2 Class 1 Div. 2. With the barrier SITRANS I300 the flowmeters sensor can be used in Ex Zone 1/0 Class 1 Div. 1 approval | |

| SITRANS FX Vortex flowmeter | Application | Description | Software for parameterization |
|---|---|---|---|
| **SITRANS FX330**<br>  | Very versatile and flexible for use in many process applications. Flow sensors combines flow, pressure and temperature measurement into one user-friendly, two-wire device.<br>• Measurement of saturated steam and superheated steam<br>• Heat metering of steam and hot water<br>• Measurement of consumption in compressed air systems<br>• Evaluation of Free Air Delivery (FAD)<br>• SIP and CIP processes in the food, beverage and pharmaceutical industries<br>• Measurement of conductive and non-conductive liquids<br>• Safety-related measurement in SIL applications (SIL2). | • Integrated pressure and temperature compensation<br>• Temperature compensation for saturated steam included as standard<br>• SIL2 certified according to IEC 61508 Edition 2<br>• Use in hazardous areas<br>• Integrated reduction of nominal diameter for space-saving and economic installation<br>• Exchange of electronics without loss of calibration and configuration data<br>• Gross and net heat calculation to support energy management<br>• Remote version with cable length up to 50 m (164 ft) | |

| SITRANS FP differential pressure flow measurement | Application | Description | Software for parameterization |
|---|---|---|---|
|  | SITRANS FP product line is suitable for all kinds of applications – liquids, dry or humid gases and steam. Due to the robust though variable design it has been and still is one of the main technologies for flow measurement in various industries.<br>A new digital sizing process ensures minimum effort during presales and full traceability in aftersales. The differential pressure portfolio consists of<br>• pitot tubes SITRANS FPS300<br>• primary elements according to ISO 5167 (orifices) SITRANS FPS200 | • Suitable for a vast range of different applications<br>• Available as pre-mounted compact system as well as remote parts<br>• Advanced intelligent sizing procedure<br>• Web-based sizing and data storage enables full traceability and easy communication<br>• All benefits of SITRANS P320 available | |

## Overview

### *Criteria for selection of flowmeter*

Each method for measuring flow has specific properties, and each flow measuring point is characterized by specific requirements. The table shown below compares the properties of the various measuring instruments and thus provides assistance in selection of the optimum device.

This section of the field device catalog includes the following instruments for measuring flow:

- Electromagnetic
- Coriolis mass flow
- Ultrasonic
- Vortex volumetric- and mass flow
- Variable area meter
- Primary element

| Measurement principle | Electromagnetic | Coriolis | Ultrasonic (inline) | Ultrasonic (clamp-on) | Vortex | Variable area meter | Primary element |
|---|---|---|---|---|---|---|---|
| Medium | Liquid (conductive) | Liquid or gas | Liquid | Liquid or gas | Steam/vapor, gases, liquid | Liquid or gas | Liquid, vapor, gas |
| Nominal size | DN 2 ... 2000 (0.08" ... 78") | 1.5 ... 150 mm (0.06" ... 6") | DN 50 ... 1200 (2" ... 48") | 6.4 mm ... 9.14 m (0.25" ... 360") | DN 15 ... 300 (½" ... 12") | DN 10 ... 100 (0.4" ... 4") G½" ... G3" | DN 10 ... 4000 (0.4" ... 160") |
| Temperature range [°C (°F)] | -40 ... +200 (-40 ... +392) | -50 ... +180 (-58 ... +356) | -20 ... +200 (-4 ... +392) | -40 ... +120 (-40 ... +248) | -40 ... +240 (-40 ... +464) | -20 ... +300 (-4 ... +572) | -100 ... +490 (-148 ... +914) |
| Max. pressure [bar (psi)] | 160 (2 320), optional higher | Up to 410 (Up to 5 950) | 40 (580) | Unlimited | 100 (1 450) | 100 (1 450) | 315 (4 569) |
| Accuracy [%] | ± 0.25 or ± 0.4 | ± 0.1 or ± 0.15 | ± 0.5 ... ± 2 | 0.5 ... 1.0 % of flow, for velocities greater than 0.3 m/s (1 ft/s) | ± 0.75 ... ± 1 | ± 1.6 ... ± 2.0 | ± 0.5 ... ± 1.2 |
| Repeatability [%] | 0.1/0.2 | 0.05 | 0.25 | 0.15% of flow, for velocities greater than 0.3 m/s (1 ft/s) | 0.1 | 0.5 | 0.1 |
| Dynamic response range | 1:100 | 1:100 | 1:400 | 1:100 | 1:25 | 1:10 | 1:6 |
| Start-of-scale value [m/s (ft/s)] | 0 (0) | 0 (0) | 0.1 (0.33) | 0 (0) | 0.4 (1.31) 2.0 (6.56) | 0.2 (0.66) | Re > 500 |
| Full-scale value | | | | ± 36/120 | | | Re < $10^8$ |
| • For liquids [m/s (ft/s)] | 0.25 ... 10 (0.825 ... 32.8) | 10 (32.8) | 10 (32.8) | ± 12/40 | 10 (32.8) | 3.5 (11.4) | 3 (9.8) |
| • For steam/vapor, gases [m/s (ft/s)] | | Approx. 300 (1000) | | ± 12/40 | 80 (262.5) | 60 (197) | 50/25 (164/82) |

## Overview

SITRANS FM electromagnetic flowmeters are designed for measuring the flow of electrically conductive liquids.

The full SITRANS FM program consists of three different types of flowmeters making Siemens unique in that it covers all possible applications where electromagnetic flowmeters are a suitable match:

**Modular pulsed DC flowmeters** cover all ordinary applications within all industries. The wide variety of combinations and versions from the modular system means that ideal adaptation is possible to each measuring task and application.

SITRANS FM products

**Battery-operated water meters** (fully electronic) are the perfect match for drinking water applications like network distribution, revenue metering and irrigation where mains power is not available. In addition, it complies with the MID (EU) and OIML R 49 water meter standards and has the MCERTS certificate.

SITRANS FM MAG 8000

**AC powered alternating field flowmeters** are used for difficult applications where other flowmeters cannot stand up to the task. This flowmeter can handle liquids and heavy slurries in industries such as mining, cement and pulp and paper.

## Overview (continued)

## Benefits

Greater flexibility

- Wide product program
- Compact or remote installation using the same transmitter and sensor
- USM II communication platform for easy integration with all systems

Easier commissioning of MAG 5000, 6000, 6000 I

All SITRANS FM pulsed DC electromagnetic flowmeters feature a unique SENSORPROM memory unit which stores sensor calibration data and transmitter settings for the lifetime of the product.

At commissioning the flowmeter commences measurement without any initial programming.

The factory settings matching the sensor size are stored in the SENSORPROM unit. Also customer specified settings are downloaded to the unit. Should the transmitter be replaced, the new transmitter will upload all previous settings and resume measurement without any need for reprogramming.

Further, the "fingerprint" used in connection with the SITRANS FM Verificator is stored during the initial sensor calibration.

Easier service

Transmitter replacement requires no programming. SENSORPROM automatically updates all settings after initialization.

Room for growth

USM II the Universal Signal Module with "plug & play" simplicity, makes it easy to access and integrate the flow measurement with almost any system and bus-protocol and it ensures the flowmeter will be easy to upgrade to future communication/bus platforms.

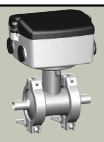
## Application

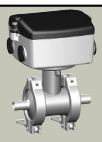


Electromagnetic flowmeters are suitable for measuring the flow of almost all electrically conductive liquids, pastes and slurries.

A prerequisite is that the medium must have a minimum conductivity. The temperature, pressure, density and viscosity have no influence on the result.

The main applications of the electromagnetic flowmeters can be found in the following sectors:

- Water and waste water
- Chemical industries
- Pharmaceutical industries
- Food and beverage industry
- Mining, aggregates and cements industries
- Pulp and paper industry
- Steel industry
- Power; utility and chilled water industry



The wide variety of combinations and versions from the modular system means that ideal adaptation is possible to each measuring task.

**XXX** = most often used

1) Not suitable for wastewater applications
2) Only in combination with DN 32 adapter A5E02054637, A5E02218297, FDK:083G2120 and FDK:083G2160
3) Pressure may be limited by the liner material chosen
4) Of actual flow for v ≥ 0.5 m/s (1.5 ft/s) and conductivity > 10 µS/cm
5) Only for PTFE
6) Ex sensor: 180 °C (356 °F)
7) For verification submit Product Variation Request (PVR)
8) Only in combination with MAG 5000 and MAG 6000 transmitters
9) EPDM liner
10) EPDM or PTFE liner with AISI 316 or Hastelloy electrodes
11) Only valid for DN 50 to DN 300 (2" to 12")
12) Sizes: DN 50, DN 80, DN 100, DN 150, DN 200, DN 250, and DN 300 (2", 3", 4", 6", 8", 10", and 12") with ANSI B16.5 Class 150 flanges
13) Only DN 15 to DN 300 (½" to 12") with MAG 6000 I Ex, compact mounted
14) Only PFA liner

## Application (continued)

***SITRANS FM compact installation***

MAG 6000 compact mounted on a MAG 3100 sensor

A compact installation is built by assembling of a MAG 6000 transmitter with a MAG 3100 sensor.

| Example of a SITRANS FM compact installation | |
|---|---|
| **Sensor** | **7ME6310-3TC11-1JA1** |
| Pipe size | DN 100 |
| Liner | Soft rubber |
| Electrodes | SS 316 |
| Flanges | EN 1092-1, PN 16 |
| **Transmitter** | **MAG 6000, Polyamide, 115 ... 230 V AC** |
| Accuracy | ± 0.2 % ± 1 mm/s |
| Supply | 230 V AC |

Note:

MAG 5000/6000 transmitters, sensors and communication modules are packed in separate boxes, the final assembly takes place during installation at the customer's place.

***SITRANS FM remote installation***

Remote installlation: MAG 600 with a wall bracket

Remote installation: MAG 3100 with coil and electrode cable

A remote installation is built by assembling of a MAG 6000 transmitter with a wall bracket and a MAG 3100 with two cables.

| Example of a SITRANS FM remote installation | |
|---|---|
| **Sensor** | **7ME6310-3TC11-1AA1** |
| Pipe size | DN 100 |
| Liner | Soft rubber |
| Electrodes | SS 316 |
| Flanges | EN 1092-1, PN 16 |
| **Transmitter** | **7ME6920-1AA10-0AA0** |
| Accuracy | ± 0.2 % ± 1 mm/s |
| Supply | 230 V AC |
| **Wall mounting kit** | **FDK:085U1018** |
| **Cable kit with coil cable and electrode cable** | **A5E01181647** |

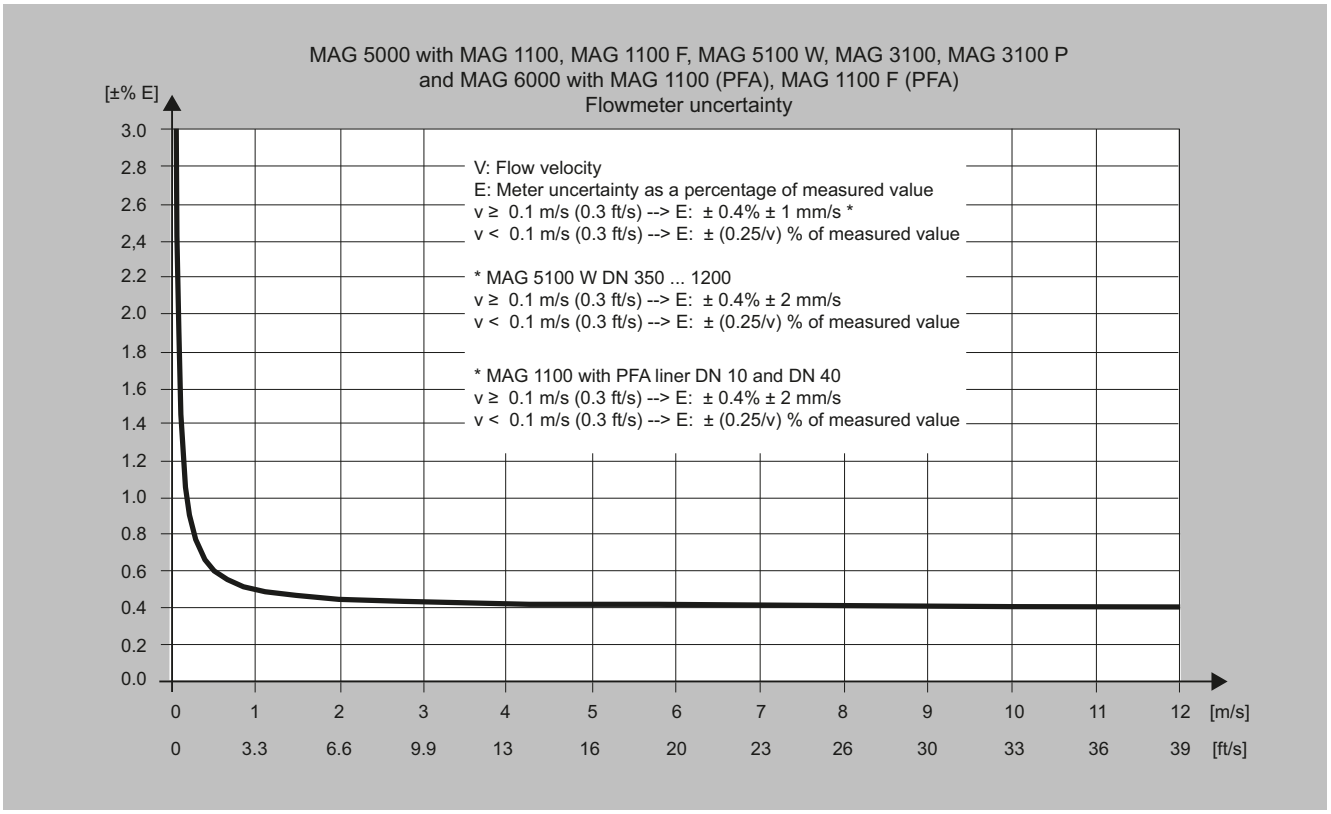
## Technical specifications

***Flowmeter Calibration and traceability***

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens facilities with traceable instruments referring directly to the physical unit of measurement according to the International System of Units (SI).

Therefore, the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability).

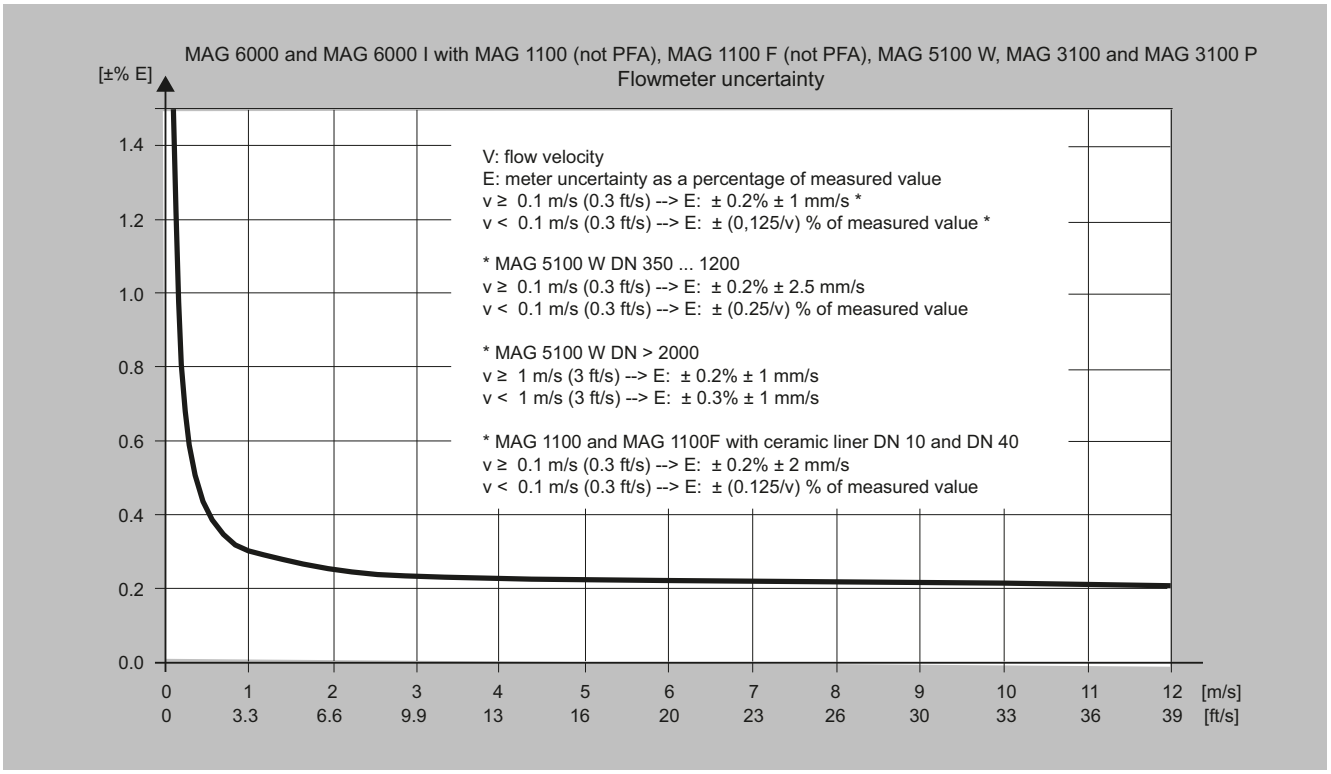


Siemens offers accredited calibrations assured to ISO 17025 in the flow range from 0.0001 m³/h to 10 000 m³/h.

The calibration follows the ISO 4185 performing calibrations under two methods: Static Weighing and Reference meter. Providing a measurement uncertainty of ±0.1 %.

Siemens accredited laboratories are recognized by ILAC MRA (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement) ensuring international traceability and recognition of the test results worldwide.

A calibration certificate is shipped with every sensor and calibration data are stored in the SENSORPROM memory unit.



***Flowmeter uncertainty***

## Technical specifications (continued)

### *Calibration reference conditions*

| Calibration reference conditions | |
|---|---|
| **Reference conditions (ISO 9104 and EN 29104)** | |
| Temperature medium | 20 °C ± 10 K (68 °F ± 18 °F) |
| Temperature ambient | 25 °C ± 10 K (77 °F ± 18 °F) |
| Supply voltage | $U_n$ ± 1 % |
| Warming-up time | 30 minutes |
| Incorporation in conductive pipe section | |
| • Inlet section | 10 × DN (DN ≤ 1200/48") |
| | 5 × DN (DN > 1200/48") |
| • Outlet section | 5 × DN (DN ≤ 1200/48") |
| | 3 × DN (DN > 1200/48") |
| Flow conditions | Developed flow profile |
| **Additions in the event of deviations from reference conditions** | |
| Current output | As pulse output (± 0,1 % of actual flow +0,05 % FSO) |
| Effect of ambient temperature | |
| • Display frequency/pulse output | < ± 0.003 %/K act. |
| • Current output | < ± 0.005 %/K act. |
| Effect of supply voltage | < 0.005 % of measuring value on 1 % change |
| Repeatability | ± 0.1 % of actual flow for v ≥ 0,5 m/s (1.5 ft/s) and conductivity > 10 µS/cm |
| **Certificates** | |
| • EN 10204-2.1 | Certificate of conformity, stating that the delivered parts are made of the material quality that was ordered. Available as Z option C15. |
| • EN 10204-2.2 | Test report certificate, a non-batch specific material analysis of the ordered material. Available as Z-option C14. |

| Calibration reference conditions | |
|---|---|
| • EN 10204-3.1 | Material analysis certificate, a batch specific analysis of the material issued by an independent inspector. Certification covers all pressure containing and wetted parts. Available as Z option C12. |

### *Calibration test point*

Test points for default calibration at 25% and 90% of factory $Q_{max}$.

© Siemens AG 2024

### *Technical specifications PROFIBUS PA/DP*

| Technical specifications PROFIBUS PA/DP | |
|---|---|
| **General specifications** | |
| PROFIBUS device profile | 3.00 Class B |
| Certified | No |
| MS0 connections | 1 |
| MS1 connections | 1 |
| MS2 connections | 2 |

### *Electrical specification DP*

| Electrical specification DP | |
|---|---|
| **Physical layer specifications** | |
| Applicable standard | IEC 61158/EN 50170 |
| Physical Layer (Transmission technology) | RS 485 |
| Transmission speed | ≤ 1.5 Mbits/s |
| Number of stations | Up to 32 per line segment, (maximum total of 126) |

| Electrical specification DP | |
|---|---|
| **Cable specification ( Type A)** | |
| Cable design | Two-wire twisted pair |
| Shielding | CU shielding braid or shielding braid and shielding foil |
| Impedance | 35 up to 165 Ω at frequencies from 3 ... 20 MHz |
| Cable capacity | < 30 pF per meter |
| Core diameter | > 0,34 $mm^2$, corresponds to AWG 22 |
| Resistance | < 110 Ω per km |
| Signal attenuation | Max. 9 dB over total length of line section |
| Max. bus length | 200 m at 1500 kbit/s, up to 1.2 km at 93.75 kbit/s. Extendable by repeaters |

### *Electrical specification PA*

| Electrical specification PA | |
|---|---|
| **Physical layer specifications** | |
| Applicable standard | IEC 61158/EN 50170 |
| Physical Layer (Transmission technology) | IEC 61158-2 |

© Siemens AG 2024

## Technical specifications (continued)

| Electrical specification PA | |
|---|---|
| Transmission speed | 31.25 Kbits/second |
| Number of stations | Up to 32 per line segment, (maximum total of 126) |
| Max. basic current [$I_B$] | 14 mA |
| Fault current [$I_{FDE}$] | 0 mA |
| Bus voltage | 9 ... 32 V (non Ex) |
| **Preferred cable specification (Type A)** | |
| Cable design | Two wire twisted pair |
| Conductor area (nominal) | 0.8 $mm^2$ (AWG 18) |
| Loop resistance | 44 Ω/km |
| Impedance | 100 Ω ± 20 % |
| Wave attenuation at 39 kHz | 3 dB/km |
| Capacitive asymmetry | 2 nF/km |
| Bus termination | Passive line termination at both |
| Max. bus length | Up to 1.9 km. Extendable by repeaters |
| **IS (Intrinsic Safety) data** | |
| Required sensor electronics | Compact or remote mounted SITRANS F M MAG 6000 I Ex |
| FISCO | YES |
| Max. $U_I$ | 17,5 V |
| Max. $I_I$ | 380 mA |
| Max. $P_I$ | 5,32 V |
| Max. $L_I$ | 0 µH |
| Max. $C_I$ | 0 nF |
| **FISCO cable requirements** | |
| Loop resistance $R_C$ | 15 ... 150 Ω/km |
| Loop inductance $L_C$ | 0,4 ... 1 mH/km |
| Capacitance $C_C$ | 80 ... 200 nF/km |
| Max. Spur length in IIC and IIB | 30 m |
| Max. Trunk length in IIC | 1 km |
| Max. Trunk length in IIB | 5 km |

***PROFIBUS parameter support***

The following parameters are accessible using a MS0 relationship from a Class 1 Master. MS0 specifies cyclic Data Exchange between a Master and a Slave.

## Technical specifications (continued)

***Flow and speed chart***

Metric

Sizing table (DN 2 ... DN 2000)

The table shows the relationship between flow velocity v, flow quantity Q and sensor dimension DN.

***Guidelines for selection of sensor***

Min. measuring range: 0 ... 0.25 m/s

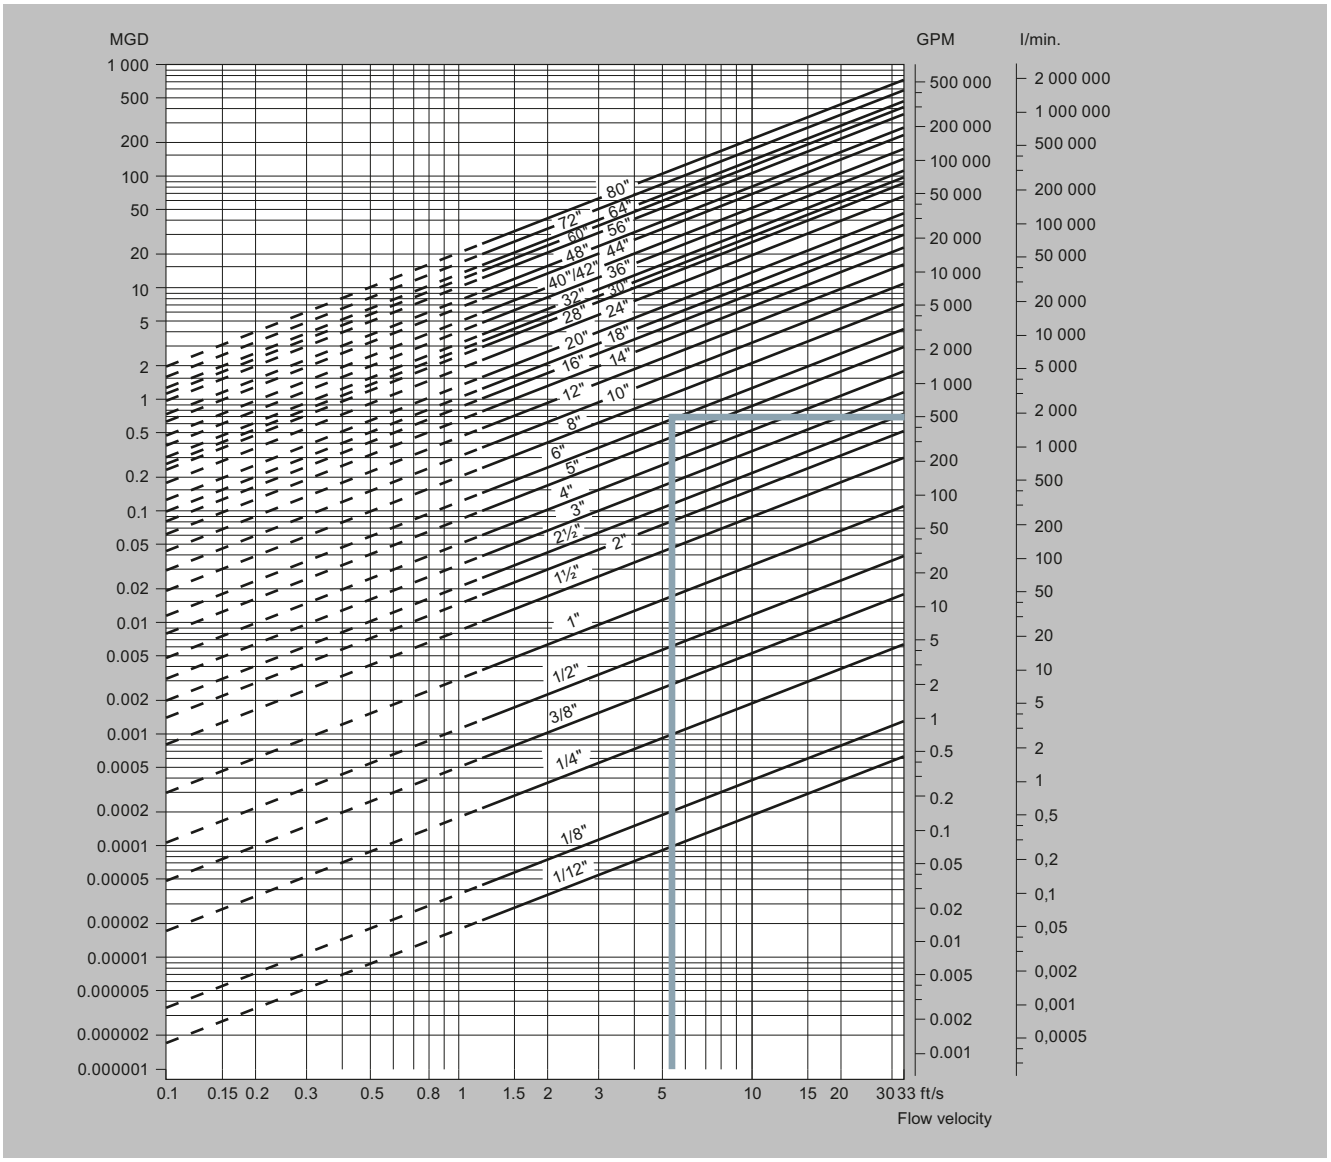
Max. measuring range: 0 ... 10 m/s

Normally the sensor size is selected so that nominal flow velocity v lies within the measuring range 1 to 3 m/s.

***Example:***

Flow quantity of 50 $m^3/h$ and a sensor dimension of DN 80 gives a flow velocity of 2.7 m/s, which is within the recommended measuring range of 1 to 3 m/s.

| Flow velocity calculation formula | Units |
|---|---|
| $v = 1273.24 \cdot Q/DN^2$ or | v: [m/s], Q: [l/s], DN: [mm] |
| $v = 353.68 \cdot Q/DN^2$ | v: [m/s], Q: [$m^3/h$], DN: [mm] |



For more information visit:
https://new.siemens.com/global/en/products/automation/process-instrumentation/flow-measurement/electromagnetic.html

© Siemens AG 2024

## Technical specifications (continued)

Imperial

Sizing table (1/12" ... 78")

The table shows the relationship between flow velocity v, flow quantity Q and sensor dimension size.

***Guidelines for selection of sensor***

Min. measuring range: 0 ... 0.8 ft/s

Max. measuring range: 0 ... 33 ft/s

Normally the sensor size is selected so that nominal flow velocity v lies within the measuring range 3 to 10 ft/s.

***Example:***

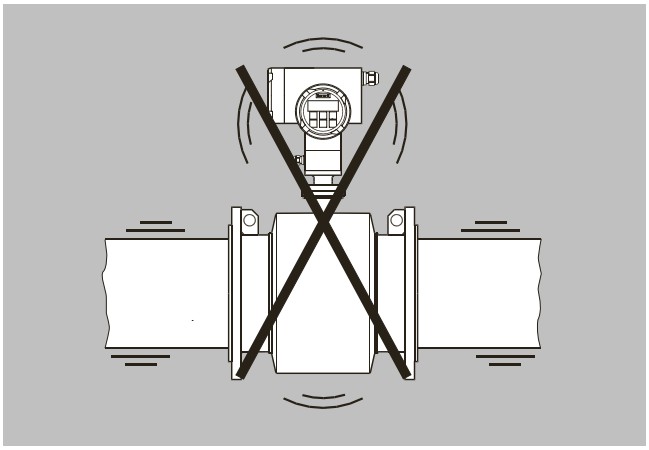
Flow quantity of 500 GPM and a sensor dimension of 6" gives a flow velocity of 5.6 ft/s, which is within the recommended measuring range of 3 to 10 ft/s.

| Flow velocity calculation formula | Units |
|---|---|
| $v = 0.408 \cdot Q/(\text{Pipe I.D.})^2$ or | v: [ft/s], Q: [GPM], Pipe I.D.: [inch] |
| $v = 283.67 \cdot Q/(\text{Pipe I.D.})^2$ | v: [ft/s], Q: [MGD], Pipe I.D.: [inch] |

For more information visit:
https://new.siemens.com/global/en/products/automation/process-instrumentation/flow-measurement/electromagnetic.html

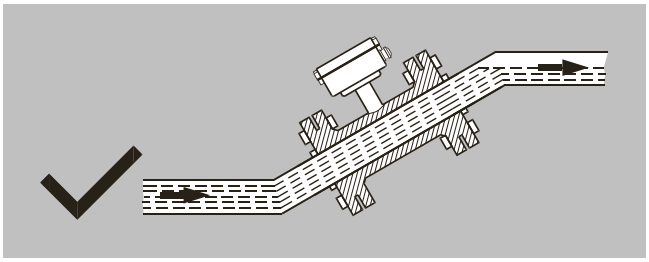
***Installation conditions***

***Vibrations***



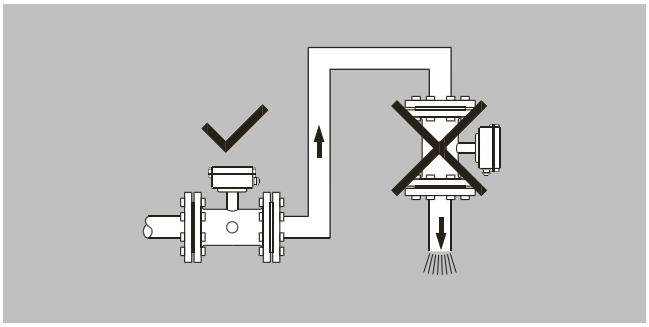
Strong vibrations should be avoided.

In applications with strong vibrations, remote mounting of the transmitter is recommended.

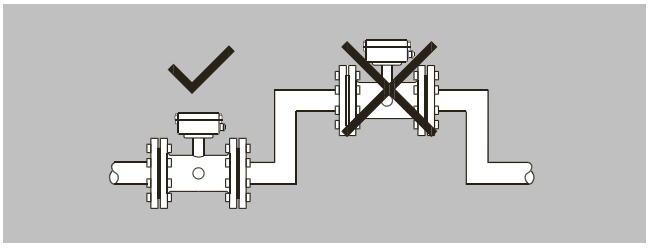


© Siemens AG 2024

## Technical specifications (continued)

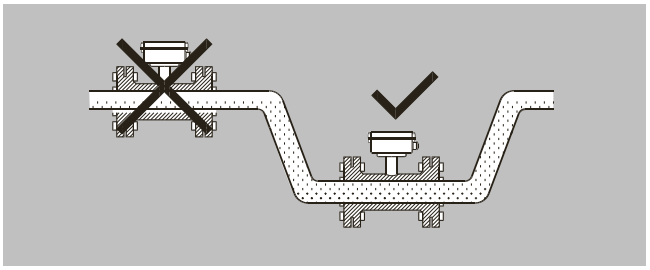


The sensor must always be completely filled with liquid.



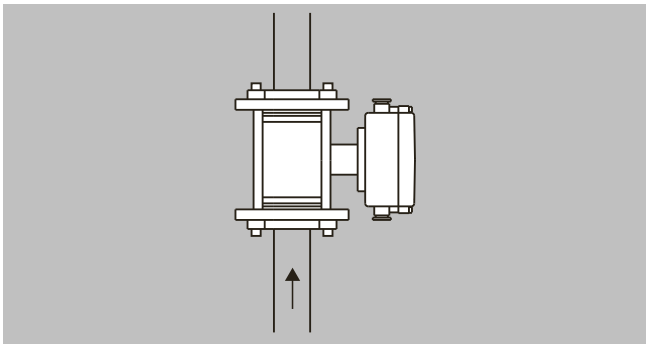
Install in pipelines which are always full

The sensor must always be completely filled with liquid. Therefore avoid:



- Installation at the highest point in the pipe system
- Installation in vertical pipes with free outlet

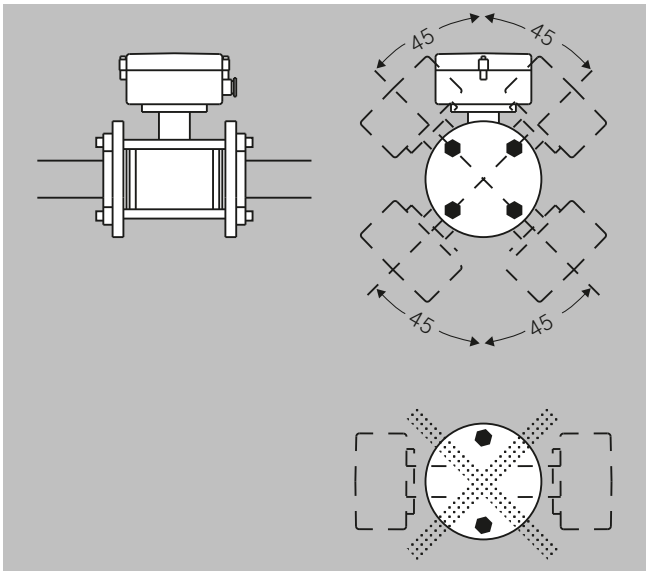
Do not install in pipelines which can run empty



For partially filled pipes or pipes with downward flow and free outlet the flowmeter should be located in a U-Tube.

Install in U-tubes when pipe is partially filled

Installation in vertical pipes

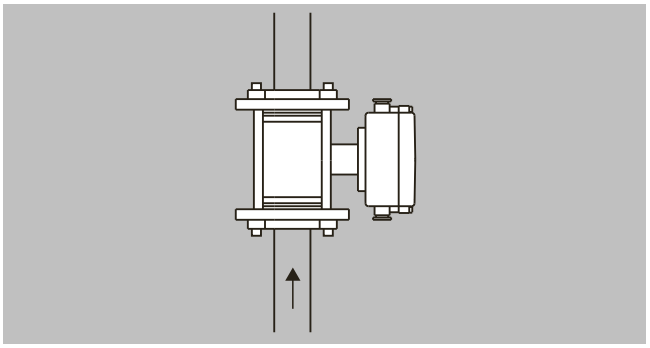


Recommended flow direction: upwards. This minimizes the effect on the measurement of any gas/air bubbles in the liquid.

Install in vertical pipes with upward flow direction

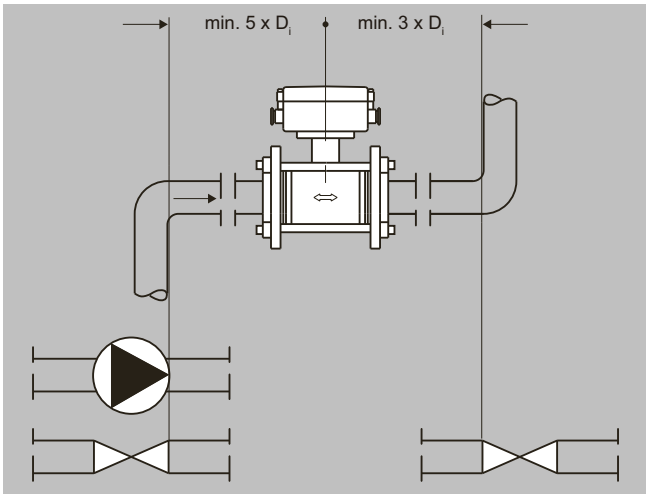
Installation in horizontal pipes

The sensor must be mounted as shown in the below figure. Do not mount the sensor as shown in the lower figure. This will position the electrodes at the top where there is possibility for air bubbles and at the bottom where there is possibility for mud, sludge, sand etc.



© Siemens AG 2024

## Technical specifications (continued)



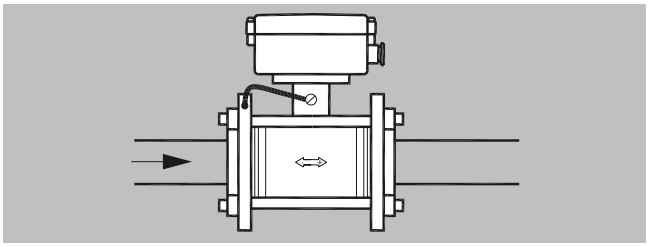
Measuring abrasive liquids and liquids containing particles

Recommended installation is in a vertical/inclined pipe to minimize the wear and deposits in the sensor.

Install in vertical pipelines with upward flow direction if measuring abrasive liquids

Inlet and outlet conditions

Recommended straight pipe lengths up and downstream for installations between elbows, pumps and valves



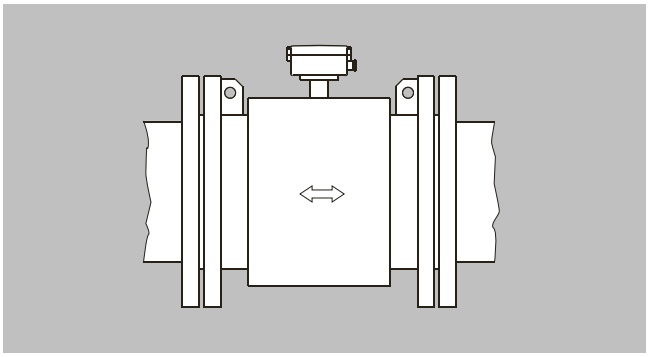
To achieve maximum accurate flow measurement it is essential to have straight pipe lengths up and downstream. For installations with non-optimal piping arrangements MAG 5100W and MAG 8000 still provide acceptable accuracy.

Tested in accordance with OIML R49 in various configurations that do not meet the suggested installation conditions MAG 5100W and MAG 8000 have received the qualification for mounting in zero diameter (0xDN) inlet/outlet installations.

Ambient temperature-Installation

Temperature changes can cause expansion or contraction in the pipe system. To avoid damage on the sensor use of proper gasket and torque should be ensured. For more information see sensor instruction.

Potential equalization

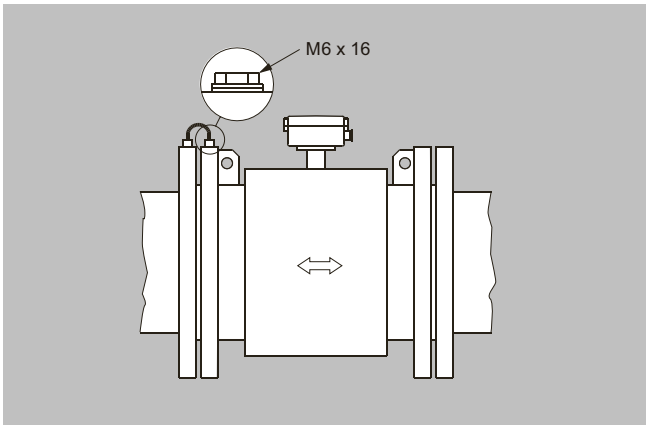


Potential equalization

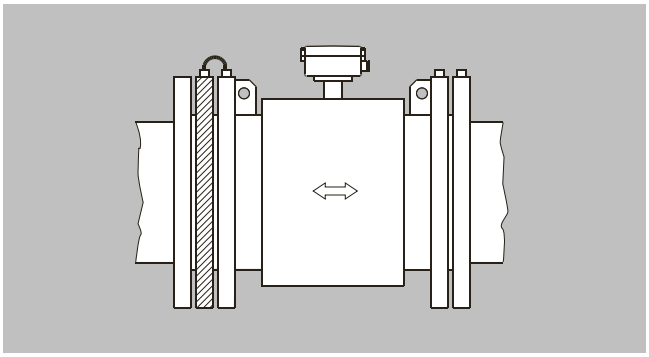
The electrical potential of the liquid must always be equal to the electrical potential of the sensor. This can be achieved in different ways depending on the application:

- Wire jumper between sensor and adjacent flange (MAG 1100, MAG 3100)
- Direct metallic contact between sensor and fittings (MAG 1100 F)
- Built-in grounding electrodes (MAG 3100, MAG 5100 W)
- Optional grounding/protection flanges/rings (MAG 1100, MAG 3100, MAG 8000)
- Optional graphite gaskets on MAG 1100 (standard for MAG 1100 High Temperature)
- MAG 8000 installed in plastic or coated pipes: two grounding rings to be used.

***Grounding***

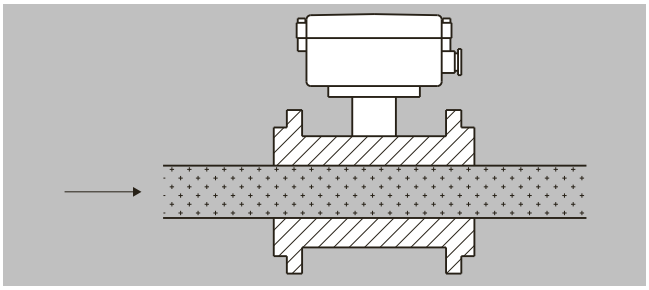


MAG 3100 and MAG 5100 W: with grounding electrodes in conductive and non-conductive pipes (no further action necessary)



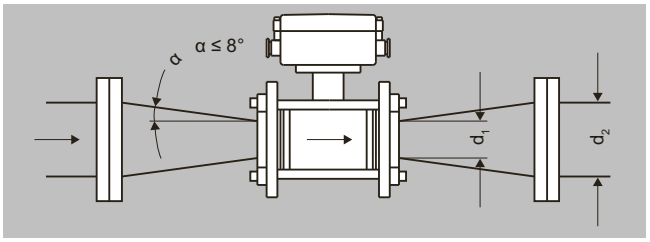
© Siemens AG 2024

## Technical specifications (continued)



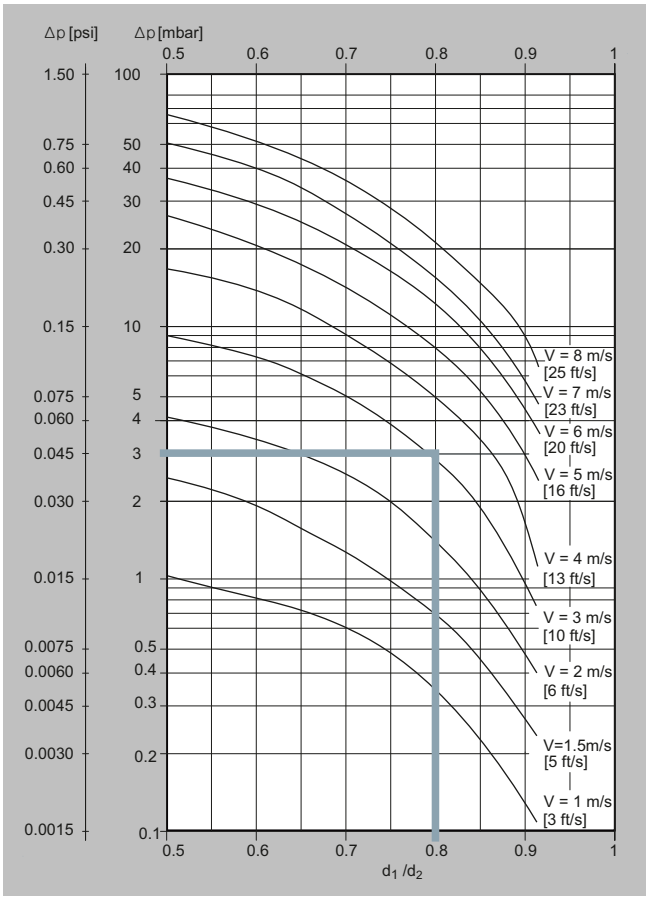
MAG 1100 and MAG 3100; without grounding electrodes in conductive pipes (MAG 1100 use graphite gasket)

Without grounding electrodes in non-conductive pipes use grounding ring(MAG 1100 use graphite gasket)



MAG 1100 F grounding via process connections. MAG 8000 grounding see the section about MAG 8000.

Vacuum



In order to prevent damages of liner when operating meters under vacuum please take note of the information "Operating pressure" given in section "Technical specification".

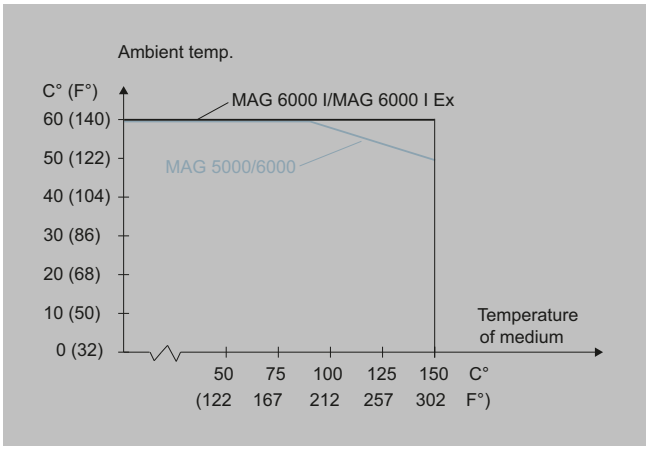
Installation in large pipes

Reduction in nominal pipe diameter

The flowmeter can be installed between two reducers (e.g. DIN 28545). Assuming that at 8° the following pressure drop curve applies. The curves are applicable to water.

Pressure drop as function of diameter reduction between reducers

Example:



Flow velocity (v) of 3 m/s (10 ft/s) in a sensor with a diameter reduction DN 100 (4") to DN 80 (3") ($d_1/d_2$ = 0.8) gives a pressure drop of 2.9 mbar (0.04 psi).

© Siemens AG 2024

## Technical specifications (continued)

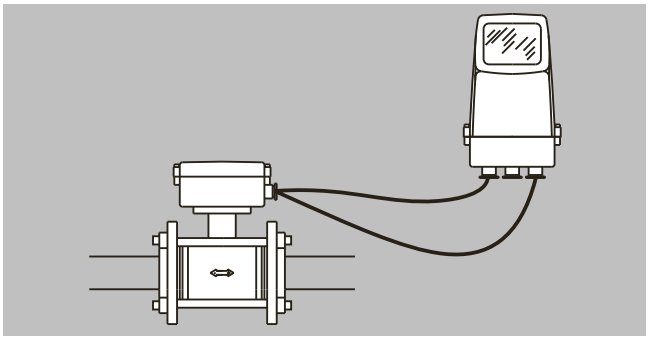
Ambient temperature

Max. ambient temperature as a function of temperature of medium

The transmitter can be installed either compact or remote.
With compact installation the temperature of medium must be according to the graph.

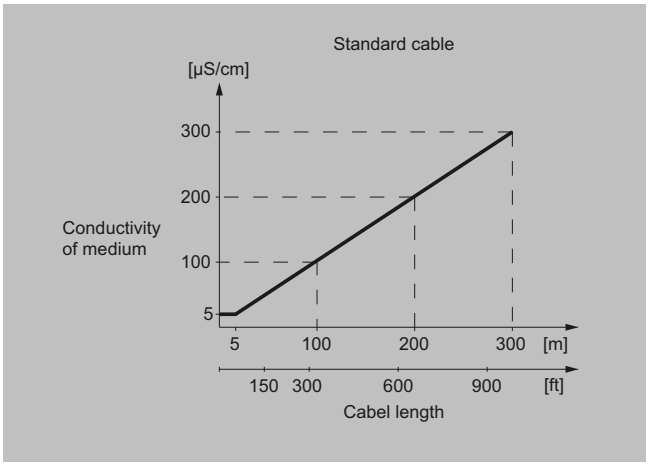
***Sensor cables and conductivity of medium***

Compact installation:



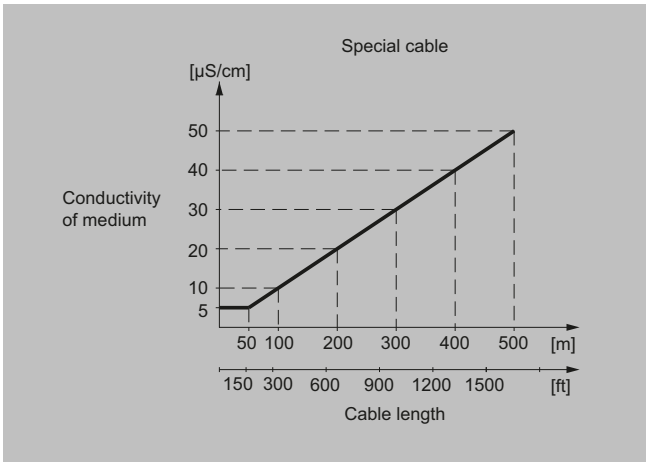
Liquids with an electrical conductivity ≥ 5 µS/cm.

***Note for MAG 1100 sizes DN2 and DN3:***



- The media conductivity must be ≥ 30 uS/cm

***Note for MAG 8000:***



- The media conductivity must be ≥ 20 uS/cm

Remote installation

Minimum conductivity of medium (using standard electrode cable)

Minimum conductivity of medium (using special electrode cable)

***Empty pipe detection***

The installation has to fulfill the following limitations for usage of the empty pipe detection function:

- Media conductivity ≥ 20 µS/cm
- Length of cable at remote installation ≤ 50 m (150 ft)
- Special shield cable must be used

Note for MAG 1100 sizes DN 2 and DN 3:

- Empty pipe detection is not available

Note for MAG 5000/6000 CT:

- Empty pipe detection is not available

## Overview

The SITRANS FM MAG 1100 is an electromagnetic flow sensor in a compact wafer design designed for flow applications in the process industry.

## Benefits

- Sensor sizes: DN 2 to DN 100 ($^1/_{12}$" to 4")
- Compact wafer design meets EN 1092, DIN and ANSI flange standards
- Corrosion resistant AISI 316 stainless steel sensor housing
- Highly resistant liner and electrodes fitting most extreme process media
- Temperature rating up to 200 °C (392 °F)
- Hose proof IP67/NEMA 6 enclosure rating
- Designed that patented in-situ verification can be conducted. Using SENSORPROM fingerprints

## Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Process industry
- Chemical industry
- Pharmaceutical industry
- Water treatment like e.g. chemical dosing

## Design

- Compact or remote mounting possible
- Easy “plug & play” field changeability of transmitter
- Simple on-site upgrade to IP68/NEMA 6P terminal box
- ATEX 2G D version
- FM Class I Div 2

## Mode of operation

The flow measuring principle is based on Faraday’s law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

## Integration

The complete flowmeter consists of a flow sensor and an associated transmitter SITRANS FM MAG 5000, 6000 or 6000 I. The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS DP and PA, Modbus RTU/RS 485.

1) 14.5 mm (0.571") shorter when the stainless steel terminal box is used (Ex or high temperature 200 °C (392 °F) version).
2) With transmitter MAG 5000 or MAG 6000 installed, weight is increased by approximately 0.8 kg (1.8 lb). With MAG 6000 I weight is increased with 5.5 kg (12.1 lbs).
3) $A_2$ is 3 mm (0.12") shorter than $A_1$

The total built-in length "L" [mm]/[inch] before assembling depends on the gasket selected.

## Overview

The electromagnetic sensor SITRANS FM MAG 1100 F is designed to meet applications in the food and beverage industry.

## Benefits

- Sensor sizes: DN 10 to DN 100 (3/8" to 4")
- AISI 316 stainless steel enclosure
- Sensor: Hygienic connection, 3A approval
- Sanitary design for CIP/SIP cleaning
- Easy commissioning, the SENSORPROM unit automatically updates settings
- Hose proof IP67/NEMA 6 enclosure rating
- Designed that patented in-situ verification can be conducted. Using SENSORPROM fingerprints.

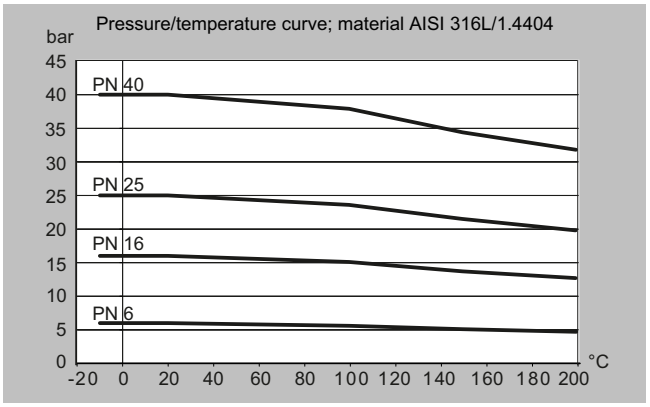
## Application

The main applications of the SITRANS FM electromagnetic sensors can be found in the following fields:

- Food industry
- Beverage industry
- Pharmaceutical industry

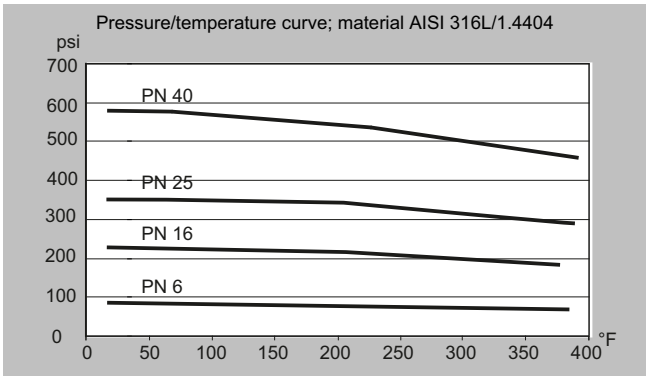
## Design

- Unique mechanical design with a wide range of customer specified sanitary connection
- Compact or remote mounting possible easy “plug & play” field changeable
- Simple on-site upgrade to IP68/NEMA 6P terminal box
- ATEX 2G D version for hazardous areas (ceramic liner)



## Mode of operation

The flow measuring principle is based on Faraday’s law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.



## Integration

The complete flowmeter consists of a sensor and an associated transmitter SITRANS FM MAG 5000, 6000 and 6000 I. The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as PROFIBUS DP and PA, Modbus RTU/RS 485, HART, FOUNDATION Fieldbus H1, DeviceNet.

## Technical specifications

| MAG 1100 F | |
|---|---|
| Measuring principle | Electromagnetic induction |
| Excitation frequency (Mains supply: 50 Hz/60 Hz) | DN 10 ... 65 (¼" ... 2½"): 12.5 Hz/15 Hz<br>DN 80 ... 100 (3", 4"): 6.25 Hz/7.5 Hz |
| **Process connection** | |
| Nominal size | DN 10 ... 100 (3/8" ... 4") |
| Process connection | Hygienic adapters available for:<br>• Direct welding onto pipe<br>• Clamp fitting<br>• Threaded fitting |
| **Rated operating conditions** | |
| ***Ambient conditions*** | |
| Ambient temperature | |
| • Sensor | -40 ... +100 °C (-40 ... +212 °F) |
| • Ex sensor | -20 ... +60 °C (-4 ... +140 °F) |
| • Compact with transmitter MAG 5000/6000 | -20 ... +60 °C (-4 ... +140 °F) |
| • Compact with transmitter MAG 6000 I [1] | -20 ... +60 °C (-4 ... +140 °F) |
| • Compact with transmitter MAG 6000 I Ex [1] | -10 ... +60 °C (14 ... 140 °F) |
| ***Temperature of medium*** | |
| MAG 1100 F (Ceramic) | -20 ... +150 °C (-4 ... +302 °F)<br>Suitable for steam sterilization |
| MAG 1100 F (PFA) | -30 ... +130 °C (-22 ... +266 °F)<br>Suitable for steam sterilization at 150 °C (302 °F) |
| ***Temperature shock*** | |
| MAG 1100 F | |
| • Duration ≤ 1 min, followed by 10 min rest | • DN 10, 15, 25: Max. ΔT ≤ 80 °C/min (3/8", ½", 1": Max. ΔT ≤ 144 °F/min)<br>• DN 40, 50, 65: Max. ΔT ≤ 70 °C/min (1½", 2", 2½": Max. ΔT ≤ 126 °F/min)<br>• DN 80, 100: Max. ΔT ≤ 60 °C/min (3", 4": Max. ΔT ≤ 108 °F/min) |
| MAG 1100 F (PFA) | Max. ± 100 °C (212 °F) momentarily |
| ***Operating pressure*** | |
| MAG 1100 F (Ceramic) | DN 10 ... 65: 40 bar (3/8" ... 2½": 580 psi)<br>DN 80: 25 bar (3": 363 psi)<br>DN 100: 25 bar (4": 363 psi)<br>Vacuum: 1 x $10^{-6}$ $bar_{abs}$ (1.5 x $10^{-5}$ $psi_{abs}$) |
| MAG 1100 F (PFA) | 20 bar (290 psi)<br>Vacuum: 0.02 $bar_{abs}$ (0.3 $psi_{abs}$)<br>DN 80 ... DN 100: $CO_2$ pressure max. 7 bar (101.5 psi) |
| ***Mechanical load (vibration)*** | 18 ... 1 000 Hz random in x, y, z, directions for 2 hours according to EN 60068-2-36<br>Sensor: 3.17 g RMS<br>Sensor with compact MAG 5000/6000 mounted transmitter: 3.17 grms<br>Sensor with compact MAG 6000 I/MAG 6000 I Ex mounted transmitter: 1.14 grms<br>For compact installation with the MAG 6000 I/MAG 6000 I Ex, transmitter to be supported to avoid tension on sensor part. |
| ***Enclosure rating*** | IP67 to EN 60529 (NEMA 6), 1 $mH_2O$ for 30 min |
| EMC | 2014/30/EU |
| **Design** | |
| Weight | See Dimensional drawings |
| ***Material*** | |

## Technical specifications (continued)

| MAG 1100 F | |
|---|---|
| Enclosure | |
| • MAG 1100 F | Stainless steel AISI 316L/1.4404 |
| Terminal box (remote version only) | |
| • Standard | Fibre glass reinforced polyamide |
| • Option | Stainless steel AISI 316/1.4436 |
| • Ex ATEX (remote version only) | Stainless steel AISI 316/1.4436 |
| **Liner** | |
| MAG 1100 F (Ceramic) | Aluminum oxide $Al_2O_3$ (ceramics) |
| MAG 1100 F (PFA) | Reinforced PFA (teflon) (not for Ex) |
| **Electrodes** | |
| MAG 1100 F (Ceramic) | Platinum with gold/Titanium brazing alloy |
| MAG 1100 F (PFA) | • DN 10 ... 15 (3/8" ... ½"): Hastelloy C276/2.4819<br>• DN 25 ... 100 (1" ... 4"): Hastelloy C22/2.4602 |
| **Cable entries** | • Remote installation 2 x M20 or 2 x ½" NPT<br>• Compact installation<br>- MAG 5000/MAG 6000: 4 x M20 or 4 x ½" NPT<br>- MAG 6000 I: 2 x M25 (for supply/output)<br>- MAG 6000I Ex: 2 x M25 (for supply/output) |
| **Certificates and approvals** | |
| Calibration | |

## Overview

The SITRANS FM MAG 3100 is an electromagnetic flow sensor in a large variety that meets the demands of almost every flow application.

## Benefits

- Wide range of sizes: DN 15 to DN 2000 (½" to 78")
- The flexible design is for all applications not covered by the standard industry-specific sensors: MAG 1100, MAG 1100 F, MAG 3100 P and MAG 5100 W
- Wide pressure range: PN 6 to PN 100
- ANSI Class 150/300, AS 2129, AS 4087, JIS K10 and K20. On request up to 690 bar (10 000 psi)
- Wide range of electrode and liner material to fit even the most extreme process media
- Fully welded construction provides a ruggedness that suits the toughest applications and environments.
- Easy commissioning, the SENSORPROM unit automatically updates settings.
- Designed to allow patented SITRANS FM in-situ verification using the SENSORPROM fingerprints.

## Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Process industry
- Chemical industry
- Steel industry
- Mining
- Utility
- Power generation and distribution
- Oil and gas/HPI
- Water and waste water

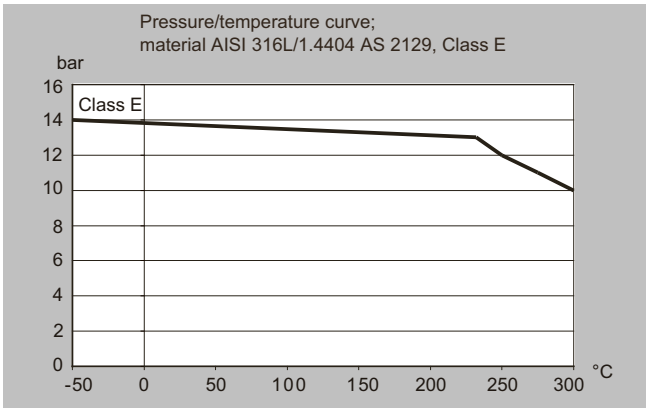
## Design

- Compact or remote mounting possible
- Easy “plug & play” field changeability of transmitter
- ATEX and FM/CSA versions
- High temperature sensor for applications with temperatures up to 180 °C (356 °F)
- Meets EEC directives: PED, 2014/68/EU pressure directive for EN 1092-1 flanges
- Built-in length according to ISO 20456, the standard includes sizes up to DN 400
- Onsite or factory upgrade to IP68/NEMA 6P of a standard sensor.

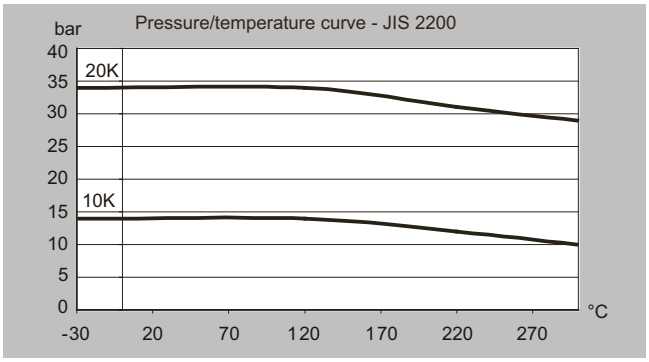
## Mode of operation

The flow measuring principle is based on Faraday’s law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

© Siemens AG 2024



## Integration



The complete flowmeter consists of a flow sensor and an associated transmitter MAG 5000, 6000 and 6000 I.

The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS DP and PA, Modbus RTU/RS 485.

1) Also for MAG 5100 W (7ME6520 > DN 300/12 inch and 7ME6580).

Grunding and protection ring - Type E (Stainless steel)

- Material: AISI 316
- For all PTFE liners
- 1 pc. incl. straps and screws

***Note:***

For MAG 3100 HT High temperature version 7ME6320... for PTFE 180 °C (356 °F) versions - grounding ring type E is included and factory mounted.

For use as protection ring order 2 pcs. For use as grounding ring order 1 pc.

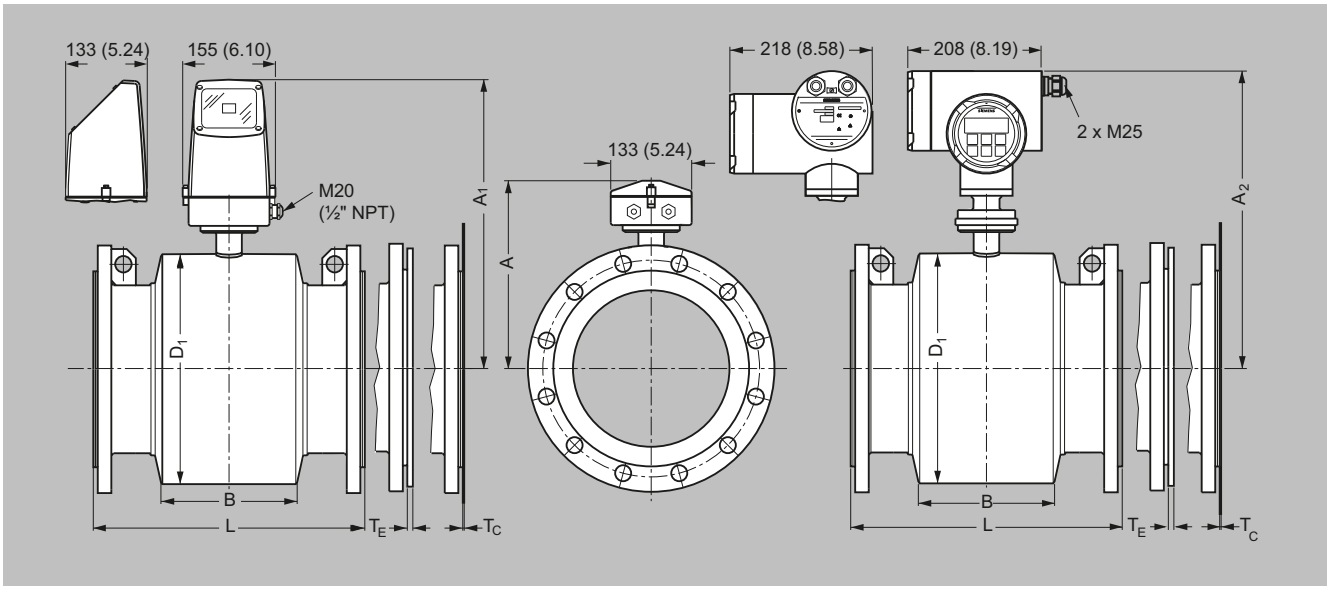
| Pressure equipment | PED conforming: All EN 1092-1 flanges 2014/68/EU [3] | PED conforming: All EN 1092-1 flanges 2014/68/EU [3] |
| Others | • CRN (Canadian Registration Number)<br>• CPA (China)<br>• EAC (Kazakhstan) | • CRN (Canadian Registration Number)<br>• CPA (China)<br>• EAC (Kazakhstan) |

Technical specification for transmitter - please see section about transmitters.



1) PN 6-40: DN ≤ 600 type 01 (SORF); DN > 600 type 11 (WNRF); PN 63-100: type 11 (WNRF).
2) Not for sensors with 300 µm coating.
3) For sizes larger than 600 mm (24") in PN 16 PED conformity is available as a cost-added option. The basic unit will carry the LVD (Low Voltage Directive) and EMC approval. All products sold outside of EU and EFTA are excluded from the Pressure Equipment directive, also products sold into certain market sectors are excluded. These include: (a) Meters used in networks for the supply, distribution and discharge of water; (b) Meters used in pipelines for the conveyance of any fluid from offshore to onshore; (c) Meters used in the extraction of petroleum or gas, including christmas tree and manifold equipment; (d) Any meter mounted on a ship or mobile offshore platform. For further information on the PED standard and requirements see the section about Pressure Equipment Directive.
4) In remote version with sensor size DN 15 ... 300 (½" ... 12").
5) In remote version with sensor size DN 350 ... 2000 (14" ... 80").
6) In compact version with sensor size DN 15 ... 300 (½" ... 12").
7) Has to be ordered with the meter. It is not possible to order the certificate afterwards.
8) With HART communication max. ambient temperature 50 °C (122 °F).

1) When grounding rings are used, the thickness of the grounding ring must be added to the built-in length.
2) Tolerances on built-in length (PN 6, PN 10, PN 16, PN 25 and PN 40):
½" to 8": +0/-0.12", 10" to 16": +0/-0.2", 18" to 24": +0.2"/-0.2", 28" to 80": +0.39"/-0.39"
Tolerances on built-in length (PN 63 and PN 100): All sizes +0.31"/-0.31"
3) $T_C$ = Protection ring type C , $T_E$ = Grounding ring type E (included and factory mounted for 356 °F PTFE liner), $T_F$ = Grounding ring Type Flat ring
4) Weights are for ANSI 150 without transmitter.
5) PN 35 DN 80 = 10.07 inch
6) PN 35 DN 500 = 26.77 inch
7) PN 35 DN 600 = 2.53 inch
8) Not AS 4087 PN 21 or PN 35
9) Not according to ISO 20456
D = Outside diameter of flange, see flange tables

## Overview

The SITRANS FM MAG 3100 P is designed to meet the most common specifications within chemical and process industries.

## Benefits

- DN 15 to DN 300 (½" to 12")
- Included in Quick Ship Program (delivery time see PIA LCP)
- Most used flowmeter in the chemical and process industries with PTFE/PFA liner and Hastelloy electrodes
- Excellent chemical resistance
- Full scope of global approvals for hazardous areas:
  - ATEX, FM, CSA, IEcEx
  - 24 V and 115/230 V Ex compact and remote
  - intrinsically safe ia analog output
- Comprehensive self-diagnostic for error indication and error logging
- Fully welded construction provides a ruggedness that suits the toughest applications and environments.
- Easy commissioning, the SENSORPROM unit automatically updates settings.
- Conforming to NAMUR recommendations NE 21, NE 32, NE 43, NE 53 and NE 70

## Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Chemical industry
- Process industry
- Pulp and paper
- Industrial waste water

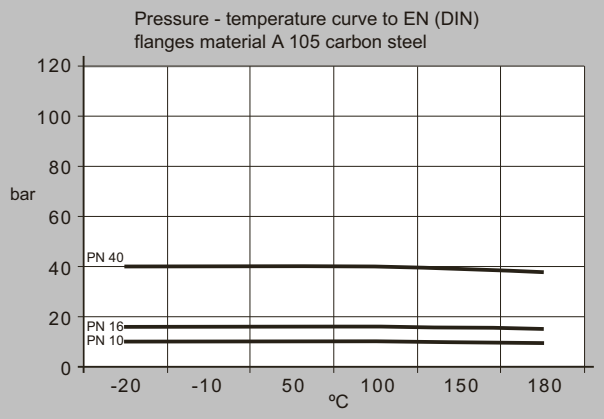
## Design

- Compact or remote mounting possible
- Easy “plug & play” field changeability of transmitter
- High temperature sensor for applications with temperatures up to 150 °C (302 °F)
- Meets EEC directives: PED, 2014/68/EU pressure directive for EN 1092-1 flanges
- Build-in length according to ISO 20456
- Onsite or factory upgrade to IP68/NEMA 6P of a standard sensor.

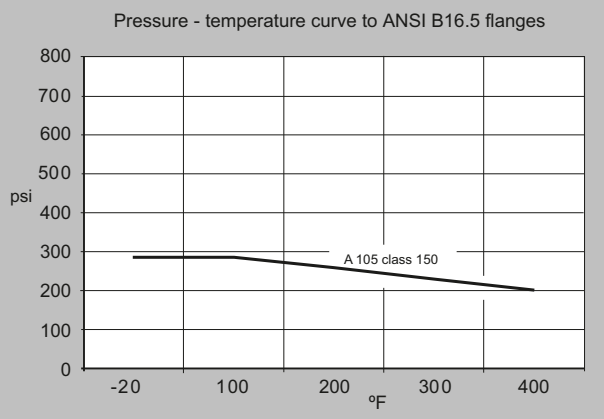
## Mode of operation

The flow measuring principle is based on Faraday’s law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

© Siemens AG 2024



## Integration



The complete flowmeter consists of a flow sensor and an associated transmitter MAG 5000, 6000 and 6000 I.

The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems such as HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS DP and PA, Modbus RTU/RS 485.

***Pressure-temperature curve to EN (DIN) flanges, material A 105 carbon steel***

***Pressure-temperature curve to ANSI B16.5 flanges***

**Note:** The pressure-temperature curves only assist in the selection of a system. No responsibility is taken for the correctness of the information. For exact data please refer to the PED requirements.

For further information on the PED standard and requirements, see the section about Pressure Equipment Directive.

## Technical specifications

| Version | MAG 3100 P |
|---|---|
| **Product characteristic** | Chemical and process industry-oriented (included in Quick Ship Program) |
| Nominal size | • PTFE: DN 15 ... 300 (½" ... 12") |
| | • PFA: DN 15 ... 150 (½" ... 6") |
| Measuring principle | Electromagnetic induction |
| Excitation frequency (Mains supply: 50 Hz/60 Hz) | • DN 15 ... 65 (½" ... 2½"): 12.5 Hz/15 Hz |
| | • DN 80 ... 150 (3" ... 6"): 6.25 Hz/7.5 Hz |
| | • DN 200 ... 300 (8" ... 12"): 3.125 Hz/3.75 Hz |
| **Process connection** | |
| Flanges | EN 1092-1, raised face[1] (EN 1092-1, DIN 2501 & BS 4504 have the same mating dimensions) |
| | • DN 15 ... 50 (½" ... 2"): PN 40 (580 psi) |
| | • DN 65 ... 300 (2½" ... 12"): PN 16 (232 psi) |
| | • DN 200 ... 300 (8" ... 12"): PN 10 (145 psi) |
| | ANSI B16.5 (BS 1560), raised face |
| | • ½" ... 12": Class 150 (20 bar (290 psi)) |
| **Rated operation conditions** | |
| **Ambient temperature** (conditions also dependent on liner characteristics) | |
| • Standard sensor | -40 ... +100 °C (-40 ... +212 °F) |
| • Ex sensor | -20 ... +60 °C (-4 ... +140 °F) |
| • Compact with transmitter | |
| - MAG 5000/6000 | -20 ... +60 °C (-4 ... +140 °F) |
| - MAG 6000 I [3] | -20 ... +60 °C (-4 ... +140 °F) |
| - MAG 6000 I Ex [3] | -20 ... +60 °C (-4 ... +140 °F) |
| Operating pressure | |
| **Operating pressure** [abs. bar] (maximum operating pressure decreases with increasing operating temperature and with stainless steel flanges) | • PTFE |
| | - DN 15 ... 300 (½" ... 12"): 0.3 ... 40 bar (4 ... 580 psi) |
| | • PFA |
| | - DN 15 ... 150 (½" ... 6"): Vacuum 0.02 ... 50 bar (0.29 ... 725 psi) |
| Enclosure rating | IP67 to EN 60529/NEMA 6, 1 m$H_2O$ for 30 min |
| | Option: IP68 to EN 60529/NEMA 6P, 10 m$H_2O$ cont. (not for Ex) |
| Pressure drop at 3 m/s | As straight pipe |
| Test pressure | 1.5 x PN (where applicable) |
| Mechanical load (Vibration) | • 18 ... 1000 Hz random in x, y, z, directions for 2 hours according to EN 60068-2-36 |
| | • Sensor: 3.17 g RMS |
| | • Sensor with compact MAG 5000/6000 mounted transmitter: 3.17 g RMS |
| | • Sensor with compact MAG 6000 I/6000 I Ex mounted transmitter: 1.14 g RMS |
| Temperature of medium | • PTFE -20 ... +150 °C (-4 ... +302 °F) |
| | • PFA -20 ... +150 °C (-4 ... +302 °F) |
| EMC | 2014/30/EU |
| **Design** | |
| Weight | See dimensional drawings |
| Flange and housing material | Carbon steel ASTM A 105 with corrosion protection EN ISO 12944 grade C4 |

## Overview

The SITRANS FM MAG 5100 W is an electromagnetic flow sensor designed to meet ground water, drinking water, wastewater, sewage or sludge applications.

## Benefits

- DN 15 to DN 2000 (½" to 80")
- Stock program of MAG 5100 W secures short delivery time
- Connection flanges EN 1092-1 (DIN 2501), ANSI, AWWA, AS and JIS
- NBR Hard Rubber and Ebonite Hard Rubber liner for all water applications
- EPDM liner with drinking water approvals
- Hastelloy integrated grounding and measuring electrodes
- Increased low flow accuracy for water leak detection, due to coned liner design
- Drinking water approvals
- Suitable for direct burial and constant flooding
- Custody transfer approvals for cold water and energy metering (MI-001, KIWA, NMI M10, PTB K7.2)
- Built-in length according to ISO 20456; the standard includes sizes up to DN 400
- Easy commissioning, SENSORPROM unit automatically uploads calibration values and settings
- Designed to allow patented in-situ verification using SENSORPROM fingerprint
- Qualified for operation in non-optimal installation conditions with no straight inlet and outlet run of piping (0 × DN)
- Conform to ISO 4064 and EN 14154 for mechanical flowmeters
- FM Fire Service Meter (Class Number 1044) for automatic fire protection systems
- Meets EEC directives: PED 2014/68/EU pressure directive for EN 1092-1 flanges
- Simple onsite or factory upgrade to IP68/NEMA 6P of a standard sensor
- Type approval of marine equipment (DNV)

## Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

- Water abstraction
- Water treatment
- Water distribution network (leak detection management)
- Custody transfer water meters
- Irrigation
- Waste water treatment
- Filtration plant (e.g. reverse osmosis and ultra-filtration)
- Industrial water applications

## Mode of operation

The flow measuring principle is based on Faradays law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

## Integration

The complete flowmeter consists of a flow sensor and an associated transmitter SITRANS FM MAG 5000, MAG 6000 or MAG 6000 I.

The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems, e.g. HART, DeviceNet, PROFIBUS DP and PA, FOUNDATION Fieldbus H1 or Modbus RTU/RS 485.

### *Accessories*

| Description | Article No. | |
|---|---|---|
| **Potting kit for IP68/NEMA 6P sealing of sensor junction box** | **FDK:085U0220** |  |

MAG 5000/6000 transmitters and sensors are packed in separate boxes, the final assembly takes place during installation at the customer's place. MAG 6000 I transmitters and sensors are delivered compact mounted from factory. Communication module will be premounted in the transmitter.

Please use online Product selector to get latest updates.

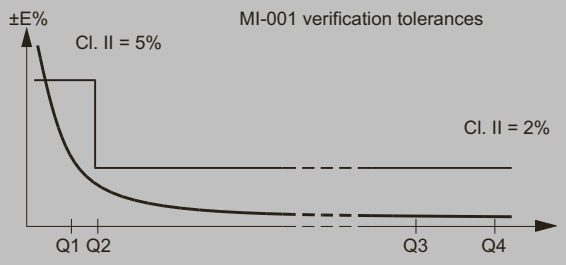
1) DN 750, DN 1050 and DN 1100 (30", 42" and 44") not available with EN 1092-1 (PN 10 and PN 16) and AS4087 flanges
2) Type 01 (SORF)
3) DN ≤ 600 type 01 (SORF); DN > 600 type 11 (WNRF)
4) Compact with transmitter MAG 5000 CT/6000 CT -20 ... +50 °C (-4 ... 122 °F)
5) With HART communication max. ambient temperature 50 °C (122 °F)
6) For verification submit Product Variation Request
7) Including Annex G
8) In remote version with sensor size DN 50 ... 300 (2" ... 12")

© Siemens AG 2024

## Technical specifications (continued)

9) For sizes larger than 600 mm (24") in PN 16 PED conformity is available as a cost-added option. The basic unit will only carry the LVD (Low Voltage Directive) and EMC approval. All products sold outside of EU and EFTA are excluded from the directive, also products sold into certain market sectors are excluded. These include: (a) Meters used in networks for the supply, distribution and discharge of water; (b) Meters used in pipelines for the conveyance of any fluid from offshore to onshore; (c) Meters used in the extraction of petroleum or gas, including Christmas tree and manifold equipment; (d) Any meter mounted on a ship or mobile offshore platform. For further information on the PED standard and requirements see the section about Pressure Equipment Directive.
10) Not for sensors with 300 µm coating
11) FM Class I Div. 2 not available for DN 15

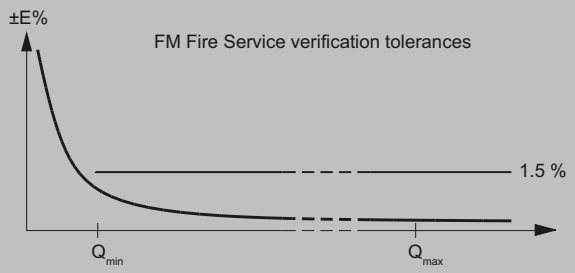
***MAG 5100 W (7ME6520) with MAG 6000 CT (Revenue program) MI-001***



MAG 5100 W CT program is type approved according to international water meter standard OIML R 49. Since the first November 2006 the MI-001 water meter directive is in force, which means that all water meters can be sold across the EU borders if the water meters contain a MI-001 label.

The MAG 5100 W MI-001 verified and labeled products are a Class II approval according to Directive 2014/32/EU of the European Parliament and Council of 26 February, 2014 on measuring instruments, Annex III Water meters (MI-001) in the sizes from DN 50 to DN 1200 (Article No. 7ME6520).

The MID certification is obtained as a modul B + D module approval according to the above mentioned directive.



Module B: Type approval according to OIML R 49

Module D: Quality insurance approval of production

***MAG 5100 W (7ME6520) with MAG 5000/MAG 6000 or MAG 6000 CT for Fire Service applications***

MAG 5100 W (7ME6520) is FM Fire Service approved for automatic fire protection systems. The approval is applicable for the sizes DN 50, DN 80, DN 100, DN 150, DN 200, DN 250 and DN 300 (2", 3", 4", 6", 8", 10" and 12") with ANSI B16.5 Class 150 flanges. The FM Fire Service approved product can be ordered via the Z-options P20, P21 and P22.

MI-001 approval

MAG 5100 W (7ME6520) MI-001 verified and labeled products at a given Q3 and Q3/Q4 = 1.25 and Q2/Q1 = 1.6 measuring ranges see table below:

The label is placed on the transmitter housing. An example of the product label is shown below:

MI-001 approval valid for:

- DN 50 to 2000 mm (2" to 80")
- Horizontal and vertical installation
- Compact or remote with max. 500 m cable
- Power supply 115 to 230 V AC, 12 to 24 V AC/DC
- With[1)] or without communication module

Other restrictions may apply (see certificate).

Special MI-001 settings:

- Unit: m³
- Qmax: Q3
- Low flow cut-off: 0.1 %
- Digital output: Frequency

For other factory settings, see Operating Instructions.

PTB K7.2 approval

## Overview

The SITRANS FMS500 is a magnetic flow meter sensor suitable for volume flow measurement of liquids (conductive) and is the ideal product for applications in water abstraction, wastewater treatment, water distribution networks, and irrigation.

The rugged, fully welded design supports direct burial, constant flooding and to stand up a wide range of harsh chemicals found in water-based applications in many different industries.

Designed for highly accurate measurement in low-flow conditions, these meters can measure from very low velocities up to 10 m/s, giving it a very wide measurement range.

Combined with a flow meter transmitter it is a traditional externally powered electromagnetic flow meter system

## Benefits

- Zero Up and Zero Down installation capabilities
- NBR rubber liner for all water and wastewater applications
- EPDM liner specifically for drinking water applications requiring special approvals
- Soft elastomer facing provides high abrasion resistance
- Increased low flow accuracy for water leak detection
- Rugged construction with no moving parts for maintenance-free operation over many years.
- Simple on-site upgrade to IP68 of a standard sensor allowing underground installation, permanent immersion or underwater installation
- Integrated grounding electrodes – no grounding rings required for many applications
- Short delivery time
- Built-in length according to ISO 20456 (up to DN 400 mm)
- SENSORPROM™ Technology provides an automatic upload of start-up settings and calibration data for easy commissioning
- Designed to allow in-situ verification for easy performance check
- In conformity with ISO 4064, OIML R49 and EN 14154

## Application

The SITRANS FMS500 with its NBR or EPDM soft rubber lining is a flow meter sensor for all kinds of water applications such as ground water, potable water, cooling water, wastewater, sewage, or sludge applications.

Connected to the compatible transmitter SITRANS FMT020, either mounted remotely or as a compact unit, it forms the magnetic flow meter system SITRANS FM520 which can be used in almost all general-purpose water applications.

SITRANS FM520

Perfect match for a cost-effective solution for all water and wastewater applications. Measuring accuracy ±0.4% of flow rate, optional ± 0.2% of flow rate available.

## Overview

Transmitter MAG 5000/6000 compact version (left) and 19“ insert version (right)

The MAG 5000 and 6000 are transmitters engineered for high performance, easy installation, commissioning and maintenance. The transmitters evaluate the signals from the SITRANS FM sensors type MAG 1100, MAG 1100 F, MAG 3100, MAG 3100 P and MAG 5100 W.

Transmitter types:

- MAG 5000: Max. measuring error ± 0.4 % ± 1 mm/s (incl. sensor)
- MAG 6000: Max. measuring error ± 0.2 % ± 1 mm/s (incl. sensor, see also sensor specifications) and with additional features such as: “plug & play” add-on bus modules; integrated batch functions.

## Benefits

- Superior signal resolution for optimum turn down ratio
- Digital signal processing with many possibilities
- Automatic reading of SENSORPROM data for easy commissioning
- User configurable operation menu with password protection
- 3 lines, 20 characters display in 11 languages
- Flow rate in various units
- Totalizer for forward, reverse and net flow as well as additional information available
- Multiple functional outputs for process control, minimum configuration with analogue, pulse/frequency and relay output (status, flow direction, limits)
- Comprehensive self-diagnostic for error indication and error logging (see SITRANS F M diagnostics)
- Batch control (MAG 6000 only)
- Custody transfer approval: MI-001 for cold water, PTB K 7.2 and OE12/C 040 for chilled water
- MAG 6000 with add-on bus modules for HART, FOUNDATION Fieldbus H1, DeviceNet, Modbus RTU/RS 485, PROFIBUS PA and DP

## Application

The SITRANS FM flowmeters are suitable for measuring the flow of almost all electrically conductive liquids, pastes and slurries. The main applications can be found in:

- Water and waste water
- Chemical and pharmaceutical industries
- Food and beverage industries
- Power generation and utility

## Design

The transmitter is designed as either IP67 NEMA 6 enclosure for compact or wall mounting or 19" version as a 19" insert as a base to be used in:

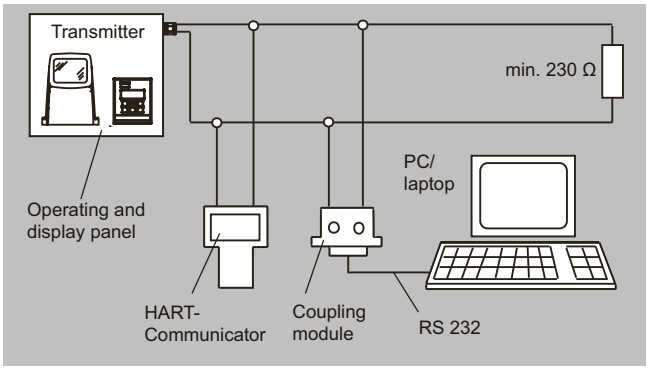
- 19" rack systems
- Front panel mounting IP65/NEMA 2
- Panel mounting IP20/NEMA 1
- Wall mounting IP66/NEMA 4X

Several options on 19" versions are available such as:

- Transmitters mounted in safe area for Ex ATEX approved flow sensors (incl. barriers)
- Transmitters with electrode cleaning unit on request

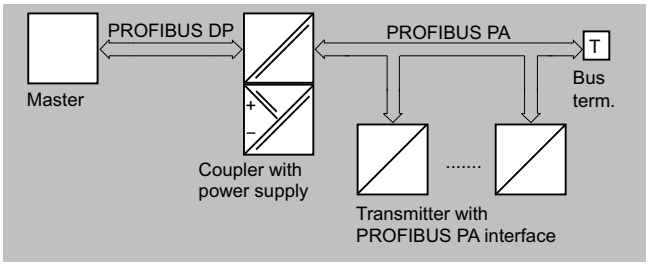
© Siemens AG 2024

## Function



The MAG 5000/6000 are transmitters with a built-in alphanumeric display in several languages. The transmitters evaluate the signals from the associated electromagnetic sensors and also fulfil the task of a power supply unit which provides the magnet coils with a constant current.

Further information on connection, mode of operation and installation can be found in the data sheets for the sensors.



***Displays and controls***

Operation of the transmitter can be carried out using:

- Control and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS or Modbus communication

HART communication

PROFIBUS PA communication

## Technical specifications

| MAG 5000 and MAG 6000 | |
|---|---|
| **Mode of operation** | |
| Measuring principle | Electromagnetic with pulsed constant field |
| Empty pipe | Detection of empty pipe (special cable required in remote mounted installation) |
| Excitation frequency | Depend on sensor size |
| Electrode input impedance | $> 1 \times 10^{14}$ Ω |
| **Input** | |
| Digital input | 11 ... 30 V DC, $R_i$ = 4. 4 KΩ |
| • Activation time | 50 ms |
| • Current | $I_{11\ V\ DC}$ = 2.5 mA, $I_{30\ V\ DC}$ = 7 mA |
| **Output** | |
| Current output | |
| • Signal range | 0 ... 20 mA or 4 ... 20 mA |
| • Load | < 800 Ω |
| • Time constant | 0.1 ... 30 s, adjustable |
| Digital output | |
| • Frequency | 0 ... 10 kHz, 50 % duty cycle (uni/bidirectional) |
| • Pulse (active) | 24 V DC, 30 mA, 1 kΩ ≤ $R_i$ ≤ 10 kΩ, short-circuit-protected (power supplied from flowmeter) |
| • Pulse (passive) | 3 ... 30 V DC, max. 110 mA, 200 Ω ≤ $R_i$ ≤ 10 - kΩ powered from connected equipment) |
| • Time constant | 0.1 ... 30 s, adjustable |
| Relay output | |
| • Time constant | Changeover relay, same as current output |
| • Load | 42 V AC/2 A, 24 V DC/1 A |
| **Low flow cut off** | 0 ... 9.9 % of maximum flow |
| **Galvanic isolation** | All inputs and outputs are galvanically isolated |
| **Max. measuring error (incl. sensor and zero point) (for detailed accuracy specifications see "System information")** | |
| • MAG 5000 | ± 0.4 % ± 1 mm/s |
| • MAG 6000 | ± 0.2 % ± 1 mm/s |
| **Rated operation conditions** | |
| Ambient temperature | |
| • Operation | • Display version: -20 ... +60 °C (-4 ... +140 °F)<br>• Blind version: -20 ... +60 °C (-4 ... +140 °F)<br>• Custody transfer (CT) version: -20 ... +50 °C (-4 ... +122 °F) |
| • Storage | -40 ... +70 °C (-40 ... +158 °F) |
| **Mechanical load (vibration)** | |
| Compact version | 18 ... 1000 Hz, 3.17 g RMS, sinusoidal in all directions to IEC 68-2-36 |
| 19" insert | 1 ... 800 Hz, 1 G, sinusoidal in all directions to IEC 68-2-36 |
| **Degree of protection** | |
| Compact version | IP67/NEMA 6 to IEC 529 and DIN 40050 (1 $mH_2O$ 30 min.) |
| 19" insert | IP20/NEMA 1 to IEC 529 and DIN 40050 |
| **EMC performance** | IEC/EN 61326-1 (all environments)<br>IEC/EN 61326-2-5 |
| **Display and keypad** | |
| Totalizer | Two eight-digit counters for forward, net or reverse flow |
| **Display** | Background illumination with alphanumeric text, 3 x 20 characters to indicate flow rate, totalized values, settings and faults; Reverse flow indicated by negative sign |
| Time constant | Time constant as current output time constant |

| MAG 5000 and MAG 6000 | |

## Overview

The SITRANS FM MAG 6000 I/MAG 6000 I Ex de transmitter is designed for the demands in the process industry. The robust die-cast aluminum housing provides superb protection, even in the most harsh industrial environments. Full input and output functionality is given even in the Ex version.

## Benefits

- Full range of Ex-rated flowmeters with intrinsically safe rated input and outputs
- For compact or remote installation
- HART, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS PA and DP, Modbus RTU/RS 485 add-on communication modules available
- Superior signal resolution for optimum turn down ratio
- Digital signal processing with many possibilities
- Automatic reading of SENSORPROM data for easy commissioning
- User configurable operation menu with password protection
  - 3 lines, 20 characters display in 11 languages
  - Flow rate in various units
  - Totalizer for forward, reverse and net flow as well as much more information available
- Multiple functional outputs for process control, minimum configuration with analogue, pulse/frequency and relay output (status, flow direction, limits)
- Comprehensive self-diagnostic for error indication and error logging
- Batch control
- Conforming to NAMUR recommendations NE 21, NE 32, NE 43, NE 53 and NE 70
- Self verification

## Design

The transmitter is designed for either compact or remote installation in non-hazardous or hazardous areas (compact mounted transmitter to be ordered together with the sensor).

## Function

The following functions are available:

- Flow rate
- 2 measuring ranges
- 2 totalizers
- Low flow cut-off
- Flow direction
- Error system
- Operating time
- Uni-/bidirectional flow
- Limit switches and pulse output
- Batch control

The MAG 6000 I/6000 I Ex de is a microprocessor-based transmitter with a built-in alphanumeric display in several languages. The transmitters evaluate the signals from the associated electromagnetic sensors and also fulfil the task of a power supply unit which provides the magnet coils with a constant current.

Further information on connection, mode of operation and installation can be found in the data sheets for the sensors.

***Displays and keypads***

Operation of the transmitter can be carried out using:

- Keypad and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS or Modbus communication

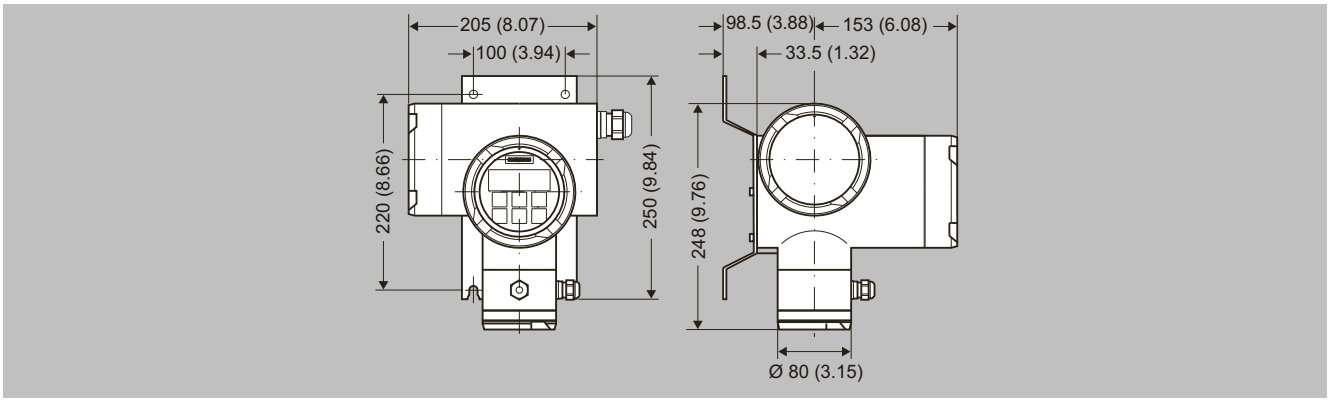
## Technical specifications

| MAG 6000 I and MAG 6000 I Ex | |
|---|---|
| **Mode of operation** | |
| Measuring principle | Electromagnetic with pulsed constant field |
| Empty pipe | Detection of empty pipe (special cable required in remote mounted installation) |
| Excitation frequency | Depend on sensor size |
| Electrode input impedance | > 1 × $10^{14}$ Ω |
| **Input** | |
| Digital input | 11 ... 30 V DC, Ri = 4.4 kΩ |
| • Activation time | 50 ms |
| • Current | $I_{11\ V\ DC}$ = 2.5 mA, $I_{30\ V\ DC}$ = 7 mA |
| **Output** | |
| Current output | |
| • Signal range | 4 ... 20 mA (active/passive) |
| • Load | < 560 Ω |
| • Time constant | 0.1 ... 30 s, adjustable |
| Digital output | |
| • Frequency | 0 ... 10 kHz, 50 % duty cycle (uni-/bidirectional) |
| • Time constant | 0.1 ... 30 s, adjustable |
| • Pulse (passive) | 3 ... 30 V DC, max. 110 mA (30 mA Ex version), 200 Ω ≤ Ri ≤ 10 kΩ (powered from connected equipment) |
| • Time constant | 0.1 ... 30 s, adjustable |
| Relay output | |
| • Time constant | Changeover relay, same as current output |
| • Load | 42 V AC/2 A, 24 V DC/1 A |
| **Low flow cut off** | 0 ... 9.9 % of maximum flow |
| **Galvanic isolation** | All inputs and outputs are galvanic isolated. |
| **Max. measuring error** | |
| MAG 6000 I/MAG 6000 I Ex (incl. sensor) | ± 0.2 % ± 1 mm/s |
| **Rated operation conditions** | |
| Ambient temperature | |
| • Operation | |
| - MAG 6000 I [2] | -20 ... +60 °C (-4 ... +140 °F) |
| - MAG 6000 I Ex [2] | -20 ... +60 °C (-4 ... 140 °F) |
| • Storage | -40 ... +70 °C (-40 ... +158 °F) |
| Mechanical load | 18 ... 1000 Hz random in x, y, z, directions for 2 hours according to EN 60068-2-36 |
| | Transmitter: 1.14 g RMS |
| Degree of protection | IP67/NEMA 4X to IEC 529 and DIN 40050 (1 $mH_2O$ 30 min.) |
| EMC performance | • IEC/EN 61326-1 (all environments) |
| | • IEC/EN 61326-2-5 |
| | • NAMUR NE 21 |
| **Display and keypad** | |
| Totalizer | Two eight-digit counters for forward, net or reverse flow |
| Display | Background illumination with alphanumeric text, 3 x 20 characters to indicate flow rate, totalized values, settings and faults; Reverse flow indicated by negative sign |
| Keypad | Capacitive touch keypad with LED light for feedback indication |
| Time constant | Time constant as current output time constant |

## Technical specifications (continued)



| MAG 6000 I and MAG 6000 I Ex | |
|---|---|
| **Design** | |
| Enclosure material | Die-cast aluminum, with corrosion resistant Basic Polyester powder coating (min. 60 µm) |
| • Wall mounting | Wall mounting bracket enclosed for remote version |
| Dimensions | See dimensional drawings |
| Weight | See dimensional drawings |
| **Power supply** | • Standard transmitter: 18 ... 90 V DC; 115 ... 230 V AC; 50 ... 60 Hz |
| | • Ex transmitter: 18 ... 30 V DC |
| | • Ex transmitter: 115 ... 230 V AC; 50 ... 60 Hz |
| Power consumption | • 230 V AC: 20 VA |
| | • 24 V DC: 9.6 W, $I_N$ = 0.4 A, $I_{ST}$ = 1 A (3 ms) |
| **Certificates and approvals** | |
| General purpose | • CE (LVD, EMC, PED, RoHS) |
| Hazardous areas | • ATEX, IECEx, FM, CSA, EAC Ex, NEPSI<br>- Zone 1 Ex d e [ia] ia IIC T6 Gb |
| | • ATEX, IECEx, CSA<br>- Zone 21 Ex tD A21 IP67 T85 °C |
| | • FM<br>- XP IS Class I Div. 1 Groups A, B, C, D<br>- DIP Class II+III Div. 1 Groups E, F, G |
| Others | • CPA (China) |
| | • EAC (Russia, Belarus, Kazakhstan) |
| | • KCs (South Korea) |
| **Cable entries** | |
| MAG 6000 I | |
| • Power supply and outputs | 2 × M20 (HART)/M25 (PROFIBUS) or 2 × ½" NPT (HART) |
| • Sensor connection | 2 × M16 or 2 × ½" NPT |
| MAG 6000 I Ex ATEX 2G D | |
| • Power supply and outputs | 2 × M20 |
| • Sensor connection | 2 × M16 |
| **Communication** | |
| Standard versions | HART, Modbus RTU/RS 485, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS PA, PROFIBUS DP add-on modules |
| Ex versions | HART, PROFIBUS PA (not for Ex version) |

[1] Applicable for: Compact mounted MAG 6000 I Ex on MAG 3100, sizes DN 15 ... 300 (½" ... 12").
[2] With HART communication max. ambient temperature 50 °C (122 °F).

## Overview

Magnetic flowmeter transmitter SITRANS FMT020

The new magnetic flow meter transmitter model SITRANS FMT020 is a high performance, robust and intelligent product, designed to fit perfectly for a wide area of process applications that require accurate, and reliable flow measurement of conductive fluids.

The SITRANS FMT020 is the next generation successor for the well-proven MAG 5000 and MAG 6000 transmitter series. The FMT020 retains all the unique features of this transmitter series such as the flexible installation concept with common housing for compact and remote mounting. It also maintains the modular design supporting easy exchangeability of the transmitter as well as the add-on communication modules, or the Sensorprom memory unit for fast commissioning, instant measurement, and data storage.

In addition, the FMT020 features the ability to simultaneously measure volumetric flow, flow velocity and electrical conductivity. It also offers enhanced diagnostics like empty pipe monitoring and device self-check, and comes with multi-functional input/output channels for process control, a unified operating concept and much more:

- High accuracy up to 0.2% of rate
- 3 totalizers for forward, reverse, and net flow
- Multi language, menu-guided operation
- Field bus: HART, PROFINET, EtherNet/IP, MODBUS RTU
- Integrated self-verification via SIMATIC PDM and Webserver

The transmitter can be configured locally via display and remotely over Fieldbus or Webserver. EDDs are available for SIMATIC PDM, AMS Device Manager, and AMS Trex Device Communicator, plus DTMs for FDTs (Field Device Tools).

## Benefits

- Backwards compatible with older (up to 15 years) flow meter sensors (MAG 5100W)
- Fast start-up without zero-point adjustments
- Variety of functions for comprehensive device check, self-diagnosis, and onboard verification
- Verificator compatible - Independently verifies performance of sensor, transmitter, and installation (including cable) without process interruption
- Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications
- Multi-functional outputs for process control, minimum configuration with analog, digital (pulse, frequency, status), and relay output
- SD memory card for data logging, configuration backup, and firmware update
- Seamless field device integration in host systems

## Application

The SITRANS FMT020 transmitter is engineered for high performance, easy installation, commissioning, and reduced maintenance.

The device is a truly robust solution and suitable for all-around applications but is also the ideal choice for demanding applications where higher diagnostics capability and functionality are important.

The transmitter can be combined with magnetic flow sensors of type SITRANS FMS500.

SITRANS FMS500

A flow meter sensor for all water and wastewater applications. With its coned design, increased low-flow accuracy is achieved making it especially useful for leak detection. It is suitable for direct burial and constant flooding. The SITRANS FMS500 complies with drinking water approvals.

Accuracy: 0,4% of rate, option for: 0,2% of rate

Range: DN 15 ... 1200 (½ ... 48")

© Siemens AG 2024

## Design

The transmitter is housed in a IP66/67, NEMA 4X/6 enclosure made of durable polycarbonate and creates together with a flow sensor a complete measurement system providing the measured flow values via a local display, multiple signal outputs or a fieldbus interface.

The modular design concept of the FMT020 makes it flexible to be remote connected or integral mounted with magnetic flow sensors of type SITRANS FMS500.

Integral-mount design

For devices with an integral-mount design, the transmitter and the sensor form a single mechanical unit.

Remote mount design

For devices with a remote mount design, the transmitter and sensor are mounted in separate locations. The electrical connection between the transmitter and the sensor is provided by sensor cables.

## Overview

The SITRANS FM100 is an electromagnetic flow sensor in a compact design for basic applications in the process and OEM industry.

## Benefits

- Connection ½", ¾", 1", 2"
- Flow- and temperature measurement
- IO-Link communication
- Dosing function with external control output
- Colored, multi-parameter configurable TFT display, rotatable 90°
- Bidirectional measuring
- Intuitive setup menu via 4 optical touch keys
- 2 freely configurable outputs
- All-metal design: stainless steel
- Included in Quick Ship Program (delivery time see PIA LCP)

## Application

The main applications of the SITRANS FM electromagnetic flow sensors can be found in the following fields:

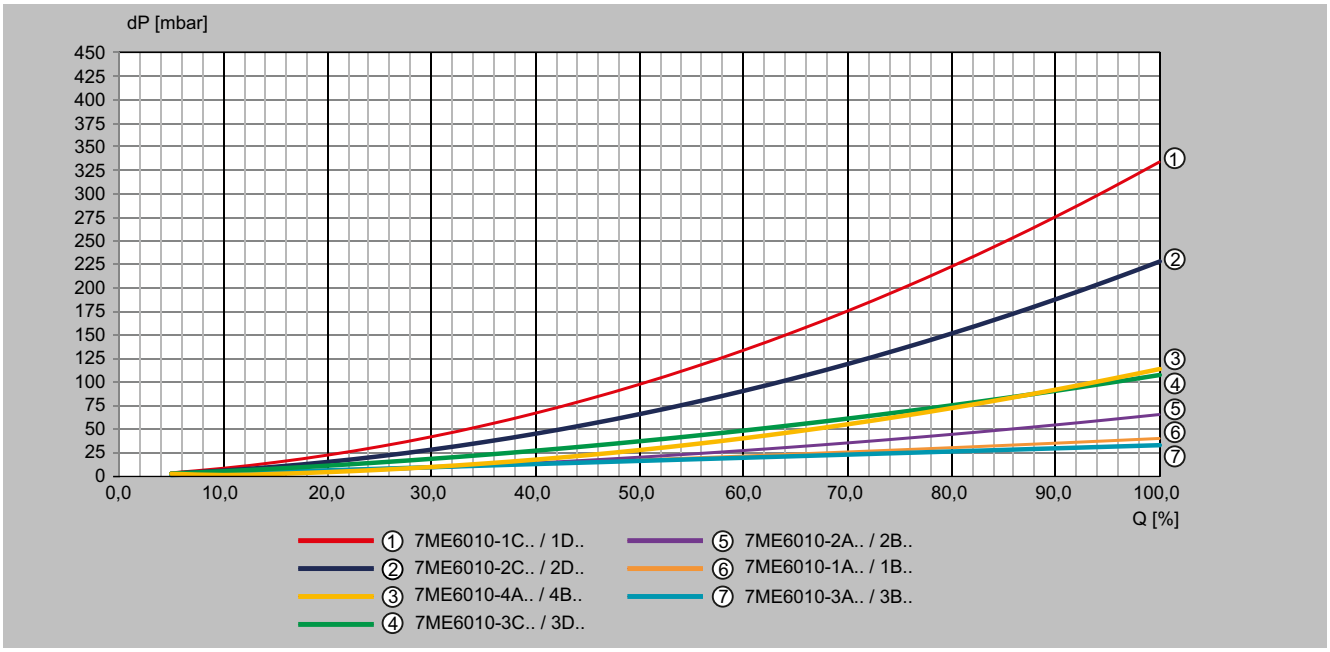
- OEM industry
- Process industry
- Small water cycles: e.g. cooling water, water leakage
- Dosing e.g. in chemical industry

## Design

The SITRANS FM100 is designed to measure small- and medium sized flow of conductive liquids. The small build allows to fit the device in almost any space. The robust stainless-steel housing protects the device in changing surroundings.

The measurement is displayed on the local screen as well as accessible via 2 freely configurable outputs (pulse-/frequency-/alarm- and analogue).

## Mode of operation



The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

© Siemens AG 2024

## Integration

***Pressure loss***

## Technical specifications

| FM100 | |
|---|---|
| Measuring principle | Electromagnetic induction |
| Media | Conductive liquid with ≥ 20 µS/cm |
| Accuracy | < ±(0.8 % of reading + 0.5 % of full scale)[1] |
| Repeatability | ±0.2 % of full scale |
| Response time flow $t_{90}$ | |
| • Alarm/pulse/frequency output | < 100 ms |
| • Current output | < 1 s |
| **Temperature measurement** | |
| Sensor | PT1000 |
| Accuracy | ≤ ±2 °C (flow > 0.2 m/s) |
| Measuring range | Temperature range of media |
| Response time temperature $t_{90}$ (signal output) | < 20 s |
| **Process connection** | |
| Nominal size | G ½" ... G 2"<br>Compatible NPT adapter available (¼" ... 2") |
| Process connection | Threaded fitting |
| **Rated operation conditions** | |
| Mounting position | In all directions, bidirectional measuring |
| In-/outlet | 3 × diameter / 2 × diameter |
| Ambient temperature | -20 ... +70 °C (-4 ... +158 °F) |
| Enclosure rating | IP67 |
| Operating pressure | Max. 16 bar |
| Pressure drop | See pressure loss diagram |
| Mechanical load | |
| • Shock resistance | DIN EN 60068-2-27:2010: 20 g (11 ms) |
| • Vibration resistance | DIN EN 60068-2-6:2008: 5 g<br>(10 ... 2 000 Hz) |
| • Environmental testing | DIN EN 60068-2-30:2006: severity level b |
| EMC | 2014/30/EU |
| **Design** | |
| Weight | See dimensional drawings |
| Housing material | Stainless steel 1.4404 |
| Electrode material | Stainless steel 1.4404 |
| Connection fitting | Stainless steel 1.4404 |
| Insulation parts | PEEK |
| Seals | FKM (Option: EPDM) |
| Display | PMMA |
| | Operation via 4 optical touch sensors (operation with hand gloves) |
| | TFT display, 128 × 128 pixels, 1.4" display, orientation in 90° steps adjustable, repetition rate adjustable 0.5 ... 10 s |

## Overview

SITRANS FM TRANSMAG 2 with the SITRANS FM MAG 911/E sensor is an AC pulsed alternating field magnetic flowmeter where the magnetic field strength is much higher than conventional DC pulsed magnetic flowmeters.

## Benefits

- Wide range of sizes DN 15 to DN 1000 (½" to 40")
- Broad range of liner and electrode materials for extreme process medias
- Fully welded construction provides a ruggedness that suits the toughest applications and environments.
- Automatic reading of SmartPLUG for easy commissioning
- Simple menu operation with two-line display
- Comprehensive self-diagnostic with self-monitoring and internal simulation

## Application

The main applications of the SITRANS FM transmitter TRANSMAG 2 can be found in the following sectors:

- Pulp and Paper industry
- Mining industry

The patented pulse alternating field technology is ideal for difficult applications like:

- High concentrated paper stock > 3 %
- Heavy mining slurries up to 70 % solid concentration
- Mining slurries with magnetic particles
- Low conductive medias ≥1 µS/cm

## Design

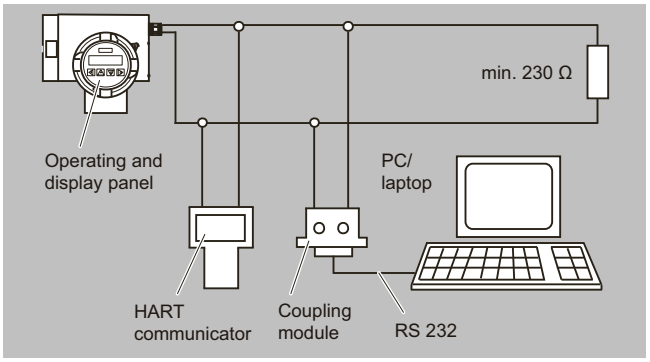
- Available for remote mounting
- PROFIBUS PA (profile 2.0) / HART communication
- Analog output and digital outputs for pulses, device status, limits, flow direction, frequency output

## Mode of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

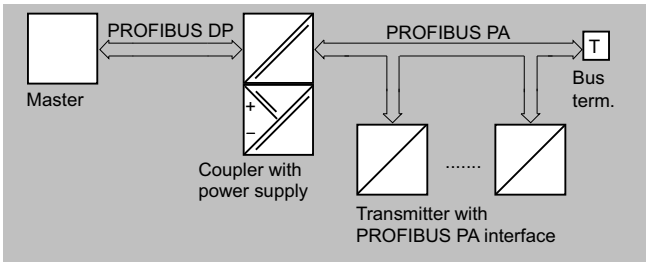
## Function

The TRANSMAG 2 is a microprocessor-based transmitter with a built-in alphanumeric display in several languages. The transmitters evaluate the signals from the associated electromagnetic sensors and also fulfill the task of a power supply unit which provides the magnet coils with a constant current.



The magnetic flux density in the sensor is additionally monitored by reference coils.

Further information on connection, mode of operation and installation can be found in the data sheets for the sensors.



***Displays and keypads***

Operation of the transmitter can be carried out using:

- Keypad and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS PA communication

HART communication

PROFIBUS PA communication

| • Bus voltage | 9 ... 32 V DC permissible |
| • Current consumption from bus | 10 mA; limited to ≤ 15 mA in event of fault by electrical current limitation |
| **Rated operating conditions** | |
| Ambient temperature | |
| • Operation | -20 ... +60 °C (-4 ... +140 °F) |
| • Storage | -25 ... +80 °C (-13 ... +176 °F) |
| Degree of protection | IP67/NEMA 4X |
| Electromagnetic compatibility (EMC) | |
| • Emitted interference | To IEC/EN 61326 for use in industrial areas |
| • Noise immunity | To IEC/EN 61326 for use in industrial areas |
| **Design** | |
| Weight of transmitter | 4.4 kg (9.7 lb) |
| Remote version | Transmitter must be connected to sensor using shielded cable |
| Maximum cable length | 100 m (328 ft) |
| Housing | Die-cast aluminum, painted |
| **Cables entries** | Remote installations |
| • Power supply and outputs | 2 x M20 (HART)/M25 (PROFIBUS) or 2 x ½" NPT (HART) |
| • Sensor connections | 2 x M16 (HART) or 2 x ½" NPT |
| **Displays and keypad** | |
| General display | LCD, backlid, two lines with 16 characters each |
| Multi-display for | Flow, totalizer, flow velocity |
| Keypad | 4 keys for entering parameters |
| **Power supply** | |
| corresponding to rating plate | |
| • AC supply | 100 ... 250 V AC ± 15 %, 47 ... 63 Hz |
| • Power consumption | Approx. 120 ... 630 VA, depending on sensor |
| Line fuse | 100 ... 230 V AC: T1.6A |
| Magnet current fuse | F5A/250 V |

### *Sensor cables between sensor and transmitter*

Sufficient shielding must be provided, as well as fixed routing of the signal cables (electrode and coil cable).

Signal cables must be routed free of vibration, and protected against strong magnetic and stray fields. In case of doubt, the sensor cables must be routed in grounded steel conduit. The cable length between the sensor and transmitter must not exceed 100 m (328 ft).

### *Protection ring*

| Technical specifications | |
|---|---|
| **Function** | To protect the edges of liners from abrasion (e.g. gravel, sand etc.). Used mainly with soft rubber liners and for PTFE liners at high temperatures from 100 to 150 °C (212 to 302 °F). |
| **Contact with medium** | Yes, please always check resistance to measured medium. |
| **Material** | Stainless steel AISI 316/1.4571, optionally Hastelloy C276/2.4819 |
| **Material thickness** | The overall length of the sensor is increased by<br>6 mm for DN 15 ... 150 (0.24" for ½" ... 6")<br>or<br>10 mm for DN 200 ... 600 (0.4" for 8" ... 24") |
| **Standard** | Optional for all liners. Must be ordered separately. |
| **Article No.** | **7ME5942-...** |

### *Grounding ring*

| Technical specifications | |
|---|---|
| **Function** | Electrical reference and grounding of the medium. Required if the pipelines are not electrically conducting or are lined (plastic pipelines, concrete pipelines etc.). All grounding rings must be connected to the grounding screw present on the sensor. |
| **Contact with medium** | Yes, please always check resistance to measured medium. |
| **Material** | Stainless steel AISI 316/1.4571 or Hastelloy C4/2.4610 |
| **Material thickness** | The overall length of the sensor is increased by 2 mm (0.08") per grounding ring. |
| **Standard** | Optional for all liners. Required between the medium and sensor for equipotential bonding between non-conducting pipelines or lined pipelines. |
| **Article No.** | **7ME5943-...** |

Important:

The rings must be ordered together with the sensor. Gaskets are not included. In case of replacement please include the sensor MLFB code on the order.

## Overview

MAG 8000 is a comprehensive meter which intelligent information and high performance measurement as well as the easy to install concept take cost of ownership and customer service to a new level for water meter.

## Benefits

***Easy to install***

- Compact or remote solution with factory mounted cable and customer setting from factory
- IP68/NEMA 6P enclosure. Sensor can be buried.
- Flexible power supply - internal or external battery pack or mains power supply with battery back-up possibilities
- Superior measurement
- Down to 0.2% maximum uncertainty
- Suitable for 0D in- and outlet conditions
- OIML R 49 type approval
- FM Fire Service Approval
- Bi-directional measurement

***Long lasting performance/Low cost of Ownership***

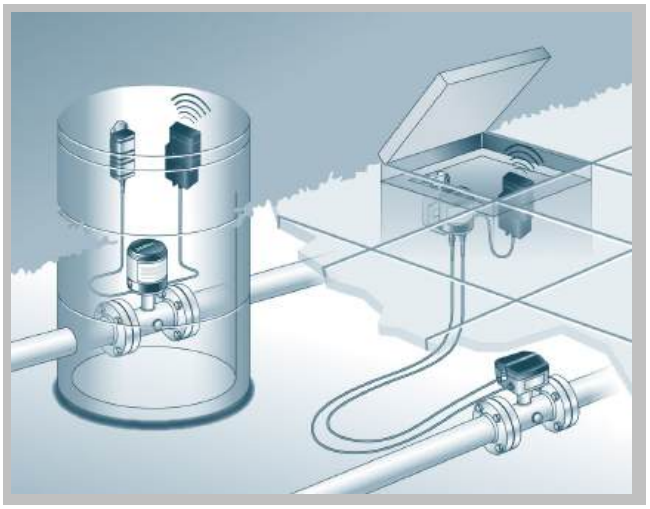
- No moving parts means less wear and tear.
- Up to 6 to 10 years maintenance-free operation in typical revenue application
- Robust construction built for the application

***Intelligent information, easy to access***

- Embedded self-testing and alarm/fault detection feature
- Internal data logger
- Advanced statistics and diagnostics
- Various add-on communication modules

## Application

The following MAG 8000 versions are available as stand-alone water meters:



- MAG 8000 (7ME6810) for abstraction and distribution network
- MAG 8000 CT (7ME6820) for revenue and bulk metering

## Design

MAG 8000 is designed to minimize power consumption.

The product program consists of

- Basic and advanced version
- Sensor sizes from DN 25 to 1200 (1" to 48")
- Compact and remote installation in IP68/NEMA 6P enclosure and factory-mounted cable
- SIMATIC PDM and Flow Tool PC configuration softwares

Modbus/Encoder module

© Siemens AG 2024

## Function

MAG 8000 is a microprocessor-based water meter with graphical display and key for optimum customer operation and information on site. The transmitter drives the magnetic field in the sensor, evaluates the flow signal from the sensor and calculates the volume passing through. It delivers the required information via the integrated pulse output or communication interfaces as part of a system solution. Its intelligent functionality, information and diagnostic ensure optimum meter performance and information to optimize water supply and billing.

MAG 8000 can be ordered as a Basic or an Advanced version.

| Features/Version | MAG 8000 Basic | MAG 8000 Advanced |
|---|---|---|
| Measuring frequency in battery power mode (Manually selected)[1)] | 1/15 or 1/30 or 1/60 Hz | 6.25 ... 1/60 Hz depending of sensor size |
| Output MAG 8000 | 2 FW/RV/AI/CA | 2 FW/RV/AI/CA |
| Communication | Add-on | Add-on |
| Data logger | Yes | Yes |
| Insulation test | Yes | Yes |
| Leakage detection | No | Yes |
| Meter utilization | No | Yes |
| Statistics | No | Yes |
| Tariff | No | Yes |
| Settle date (Revenue) | No | Yes |

1) Excitation frequency settings with mains power supply, see technical specifications for each version

Some information is accessible via the display whereas all information is accessible via the IrDA communication interface with the PDM software. Data and parameters are registered in a EEPROM. They can all be read, but changing the information demands a software password or a hardware key attached to the printed circuit board.

The SIMATIC PDM tool gives the possibility of testing and verifying the flowmeter on site and creating a printed "Qualification Certificate" with all specific data that define the quality status of the measurement.

The Qualification Certificate consists of two pages with information about the actual status of the sensor:

Part 1 provides general settings, sensor and battery info, totalizer values and pulse output settings.

Part 2 provides detailed information about electronic and sensor functionality and a main parameter list for evaluating the functionality of the MAG 8000 water meter.

## Function (continued)

***SIMATIC PDM***

For more details about SIMATIC PDM please go to "Communication".

## Technical specifications

| MAG 8000 | |
|---|---|
| **Installation** | Compact (integral) |
| | Remote with factory-mounted cable 5, 10, 20 or 30 m (16.4, 32.8, 65.6 or 98.4 ft) |
| **Enclosure** | Stainless steel top housing (AISI 316) and coated brass bottom |
| | Remote wall mount bracket in stainless steel (AISI 304) |
| | Remote version terminal box in fibre glass reinforced polyamide |
| **Cable entries** | 2 × M20 (one gland for one cable of size 6 ... 8 mm (0.02 ... 0.026 ft) is included in the standard delivery) |
| **Display** | Display with 8 digits for main information |
| | Index, menu and status symbols for dedicated information |
| Resolution | Totalized information can be displayed with 1, 2 or 3 decimals or automatic adjustment (default) |
| **Flow unit** | |
| Europe | Volume in $m^3$ and flow rate in $m^3/h$ |
| US | Volume in Gallon and flow rate in GPM |
| Australia | Volume in Mi and flow rate as Ml/d |
| **Optional display units** | Volume: $m^3$ × 100, l × 100, G × 100, G × 1000, MG, CF × 100, CF × 1000, AF, Al, kl, BBL42 |
| | Flow: $m^3$/min, $m^3$/d, l/s, l/min, GPS, GPH, GPD, MGD, CFS, CFM, CFH, BBL42/s, BBL42/min, BBL42/h, BBL42/d |
| **Digital output** | 2 passive outputs (MOS), individual galvanically isolated |
| | Maximum load ±35 V DC, 50 mA short circuit protected |
| Output A function | Programmable as pulse volume – forward – reverse – forward/net – reverse/net |
| Output B function | Programmable as pulse volume (like output A), alarm |
| Output | Max. pulse rate of 50 Hz (pulse B) and 100 Hz (pulse A), pulse width of 5, 10, 50, 100, 500 ms |
| **Communication** | IrDA: Standard integrated infrared communication interface with Modbus RTU protocol |
| Add-on modules | • RS 232 serial interface with Modbus RTU (Rx/Tx/GND), point to point with max. 15 m cable |
| | • RS 485 serial interface with Modbus RTU (+/-/GND), multidrop with up to 32 devices with max. 1000 m cable |
| | • Encoder interface module (for Itron 200WP) "Sensus protocol" |
| | • 3G/UMTS module with or without analog input cable |
| | • IIoT Wireless Communication Module with or without analog input cable |
| **Power supply** | Auto detection of power source with display symbol for operation power |
| Internal battery pack | 1 D-Cell 3.6 V/16.5 Ah |
| | 2 D-Cell 3.6 V/33 Ah |
| External battery pack | 4 D-Cell 3.6 V/66 Ah |
| **Mains power supply** | 12 ... 24 V AC/DC (10 ... 32 V) 2 VA |
| | 115 ... 230 V AC (85 ... 264 V) 2 VA |
| | Both mains power supply systems are upgradable for battery backup via internal D-Cell (3.6 V 16.5 Ah) or external battery pack. |
| Cable | 3 m (9.8 ft) for external connection to mains supply (without cable plug) |

| Features | |
|---|---|
| **Application identification** | Tag number up to 15 characters |
| **Time and date** | Device embedded Real Time Clock (Synchronization with NTP server if 3G/UMTS module or IIoT WCM connected) |
| **Totalizer** | |
| MAG 8000 | Totalizer 1 and Totalizer 2: Configurable to Forward, Reverse and Bidirectional netflow |
| | Totalizer 3: (following totalizer 1 setting) resettable via display key |
| **Measurement** | |
| Low flow cut-off | |
| • 7ME6810 | Cut-off at 15 mm/s[1)] |
| • 7ME6820 | Cut-off at 15 mm/s[1)] |
| Empty pipe detection | Symbolized in display |
| Data logger | Logging of 26 records: selectable as daily, weekly or monthly logging |
| **Alarm** | Active alarm is indicated on the display. |
| **Data protection** | All data stored in an EEPROM. Totalizers 1 and 2 are backed up every 10 min, statistic every hour and power consumption and temperature measurement every 4 hours. |
| | Password protection of all parameters and hardware protection of calibration and revenue parameters. |
| **Battery power management** | Optimal battery information on remaining capacity. |
| | Calculated capacity includes all consuming elements and available battery capacity is adjusted related to change in ambient temperature. |
| | Numbers of power-ups |
| | Date and time registered for first and last time power alarm. |
| **Diagnostic** | |
| Continuous self test including | Coil current to drive the magnetic field |
| | Signal input circuit |
| | Data calculation, handling and storing |
| Alarm statistics and logging for fault analyzing | Electrode impedance to check actual media contact |
| | Flow simulation to check pulse and communication signal chain for correct scaling |
| | Number of sensor measurements (excitations) |
| | Transmitter temperature (battery capacity calculation) |
| | Low impedance alarm for change in media |
| | Flow alarm when defined high flow exceeds |
| | Verification mode for fast measure performance check |
| **Insulation test** | Test of signal immunity against disturbance and bad installation. Test interval is selectable and measurement is interrupted during the test period of 4 min. |
| **Leakage detection** (only Advanced version) | Monitoring the lowest flow or volume during selected time window within 24 hours. Leakage is detected over a selectable period where monitored value exceed the possible leakage level. Min. and max. values are stored with date registration. Last store value visible on the display. |
| **Meter Utilization** (only Advanced version) | 6 registers for monitoring total time the meter has operated in different flow intervals. Registered intervals are free selectable as % of $Q_n$ (Q3). |

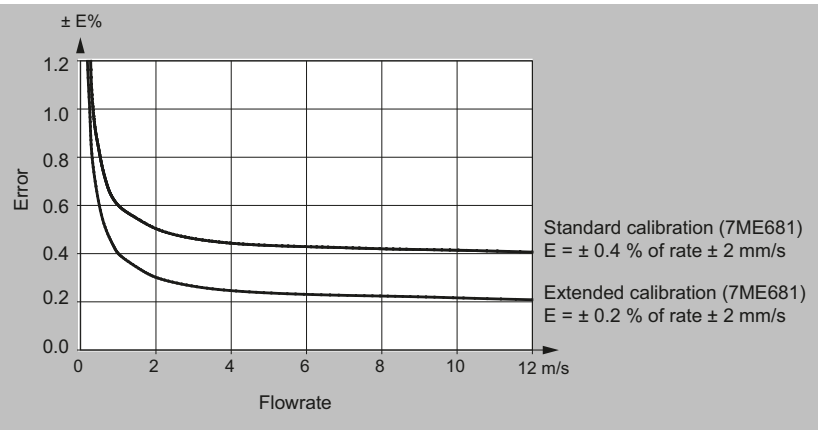
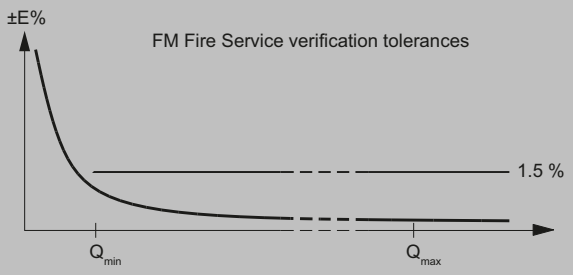
1) Siemens warrants the measurement accuracy down to a flow velocity of 15 mm/s. For a flow velocity below 15 mm/s, we don't warrant the measurement accuracy.



### *MAG 8000 water meter uncertainty*

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens flow facilities with traceable instruments referring directly to the physical unit of measurement according to the International System of Units (SI).

Therefore, the calibration certificate ensures recognition of the test results worldwide, including the US (NIST traceability).



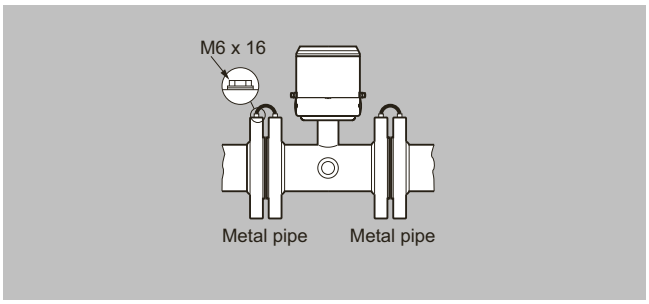
Siemens offers accredited calibrations assured to ISO 17025 in the flow range from 0.0001 m³/h to 10 000 m³/h. Siemens Flow Instruments accredited laboratories are recognized by ILAC MRA (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement) ensuring international traceability and recognition of the test results worldwide.

The selected calibration determines the accuracy of the meter. A standard calibration results in max. ±0.4% uncertainty and an extended calibration ±0.2%. A calibration certificate follows every sensor and calibration data are stored in the meter unit.

### *MAG 8000 (7ME6810) for Fire Service applications*

MAG 8000 (7ME6810) is FM Fire Service approved for automatic fire protection systems according to the Fire Service Meters Standard, Class Number 1044. The approval is applicable for the sizes DN 50, DN 80, DN 100, DN 150, DN 200, DN 250, and DN 300 (2", 3", 4", 6", 8", 10", and 12") with ANSI B16.5 Class 150 flanges. The FM Fire Service approved product can be ordered via the Z-options P20, P21 and P22.

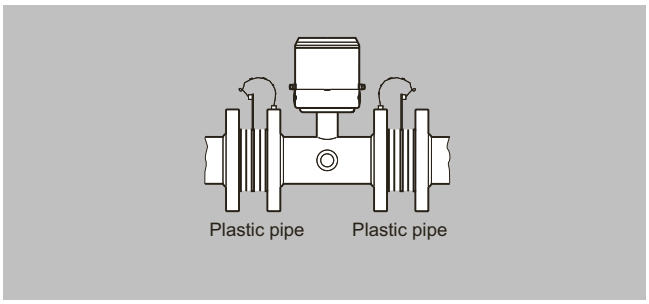
© Siemens AG 2024



## Technical specifications (continued)

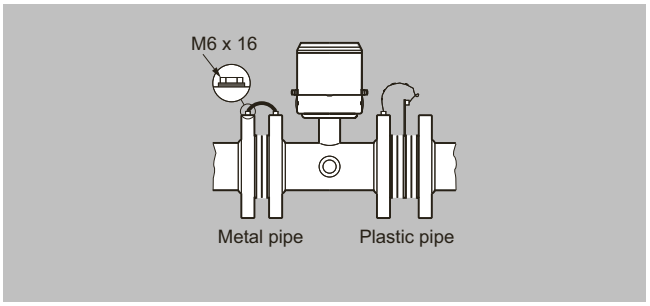
***Grounding***

The sensor body must be grounded using grounding straps and/or grounding rings to protect the flow signal against stray electrical noise. This ensures that the noise is carried through the sensor body and a noise-free measuring area within the sensor body. For MAG 8000 Irrigation grounding rings on both sides are factory-mounted.



Metal pipes

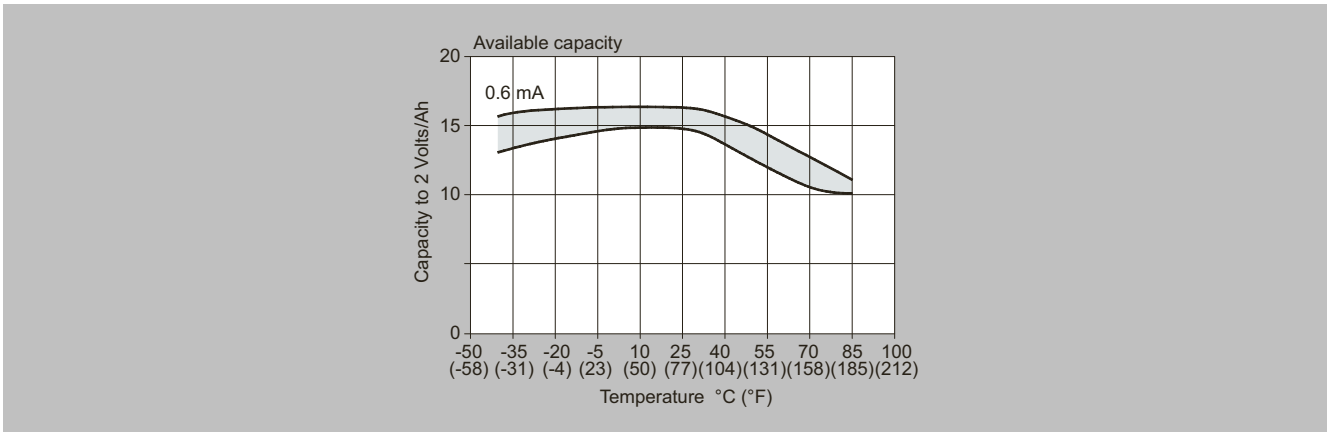
On metal pipes, connect the straps to both flanges.



Plastic pipes

On plastic pipes and lined metal pipes, optional grounding rings must be used at both ends.Grounding rings has to be ordered separately see “grounding ring kit”.

Combination of metal and plastic pipes



A combination of metal and plastic requires straps for metal pipe and grounding rings for plastic pipe.

***Battery operation time and calculation***

The battery operation time depends on the connected battery pack as well as the operation condition of the meter.

MAG 8000 calculates the remaining capacity every 4 hours and includes all consuming elements. Calculation compensates for temperature influence on battery capacity.

The graphic shows the effect from other temperatures. A variation in temperature from 15 °C to 55 °C (59 to 131 °F) reduces the capacity by 17% in the table from 15 Ah to 12.5 Ah.

At typical revenue scenario of expected battery operation time can be seen in the table below.

The measurement for calculating the rest capacity of the battery life time is only completed if the system has no active fatal faults or the empty pipe is active. Maximum battery specification is 10 years operation.

© Siemens AG 2024

## Technical specifications (continued)

| Scenario - Revenue application | |
|---|---|
| Output A | Pulse rate max. 10 Hz |
| Output B | Alarm or call-up |
| Meter dialog | 1 hour per month |
| Add-com | None |
| Temperature profile | • 5% at 0 °C (32 °F)<br>• 80% at 15 °C (59 °F)<br>• 15% at 50 °C (122 °F) |

***Battery lifetime (subject to the assumptions mentioned above)***

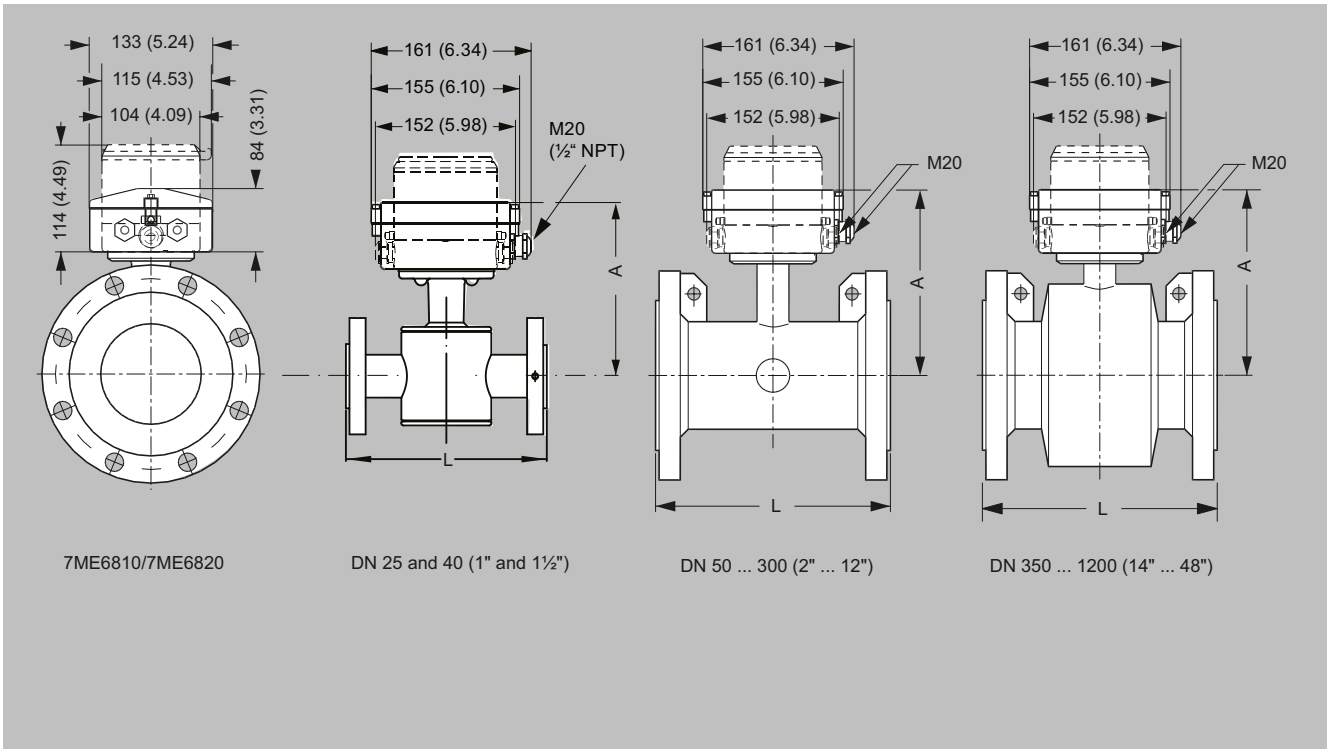
MAG 8000 for abstraction and distribution network applications (7ME6810) and MAG 8000 CT for revenue and bulk metering (7ME6820)

| Excitation frequency (24 h operation) | | 1/60 Hz | 1/30 Hz | 1/15 Hz | 1/5 Hz | 1.5625 Hz | 3.125 Hz | 6.25 Hz |
|---|---|---|---|---|---|---|---|---|
| **2 D-Cell battery 33 Ah Internal battery pack** | DN 25 ... 150 (1" ... 6") | 9 years | 9 years | 7 years | 43 months | 8 months | 3 months | 2 months |
| | DN 200 ... 600 (8" ... 24") | 9 years | 6 years | 4 years | 22 months | 3 months | 1 month | N/A |
| | DN 700 ... 1200 (28" ... 48") | 7 years | 4 years | 2 years | 12 months | 1 months | N/A | N/A |
| **4 D-Cell battery 66 Ah External battery pack** | DN 25 ... 150 (1" ... 68") | 15 years | 15 years | 14 years | 86 months | 16 months | 7 months | 4 months |
| | DN 200 ... 600 (8" ... 24") | 15 years | 13 years | 8 years | 44 months | 7 months | 3 months | N/A |
| | DN 700 ... 1200 (28" ... 48") | 14 years | 9 years | 5 years | 24 months | 3 months | N/A | N/A |

Typical battery lifetime scenario for MAG 8000 with 3G or IIoT Wireless Communication Module

| Transmission once a day and MAG 8000 factory settings | |
|---|---|
| 2 D-Cell battery 33 Ah Internal battery pack | 3 ... 4 years |
| 4 D-Cell battery 66 Ah External battery pack | 7 ... 8 years |

External battery pack can be used as battery backup for mains power supply (if two cable entries in one cable gland are needed, order cable glands with two entries, see accessories)



Serial RS 232/RS 485 add-on communication modules are designed for mains powered systems as the battery operation time will be reduced. At 1 hour communication per month (all meter data collected 2 times per day) and the module is connected, the operation time is reduced to:

- RS 232:
  - Switched on constantly:
    6.4 months for 2 D-cell internal battery pack / 12.8 months for 4 D-cell ext. battery pack
  - Switched on 2 s/day:
    39 months for 2 D-cell internal battery pack / 78 months for 4 D-cell ext. battery pack
- RS 485:
  - With the termination resistor on:
    2.3 months for 2 D-cell internal battery pack / 4.6 months for 4 D-cell ext. battery pack
  - With the termination resistor off:
    39 months for 2 D-cell internal battery pack / 78 months for 4 D-cell ext. battery pack, in case the entire communication time is less than 4 hours/day

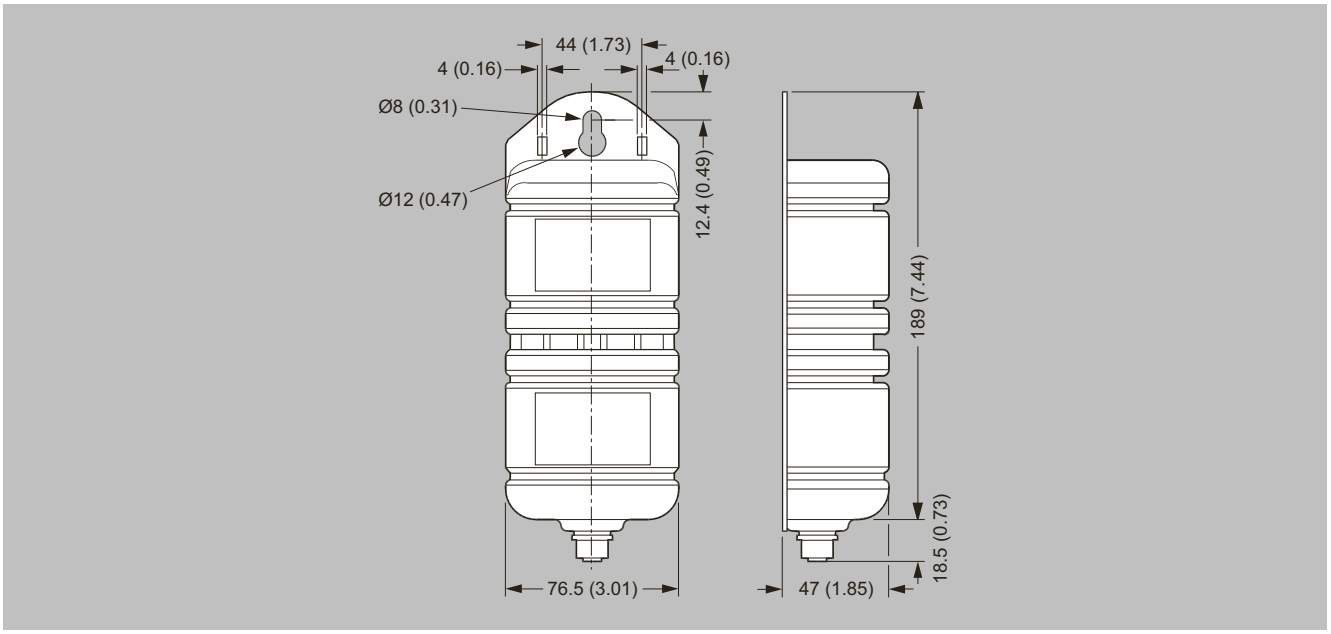
## Dimensional drawings (continued)



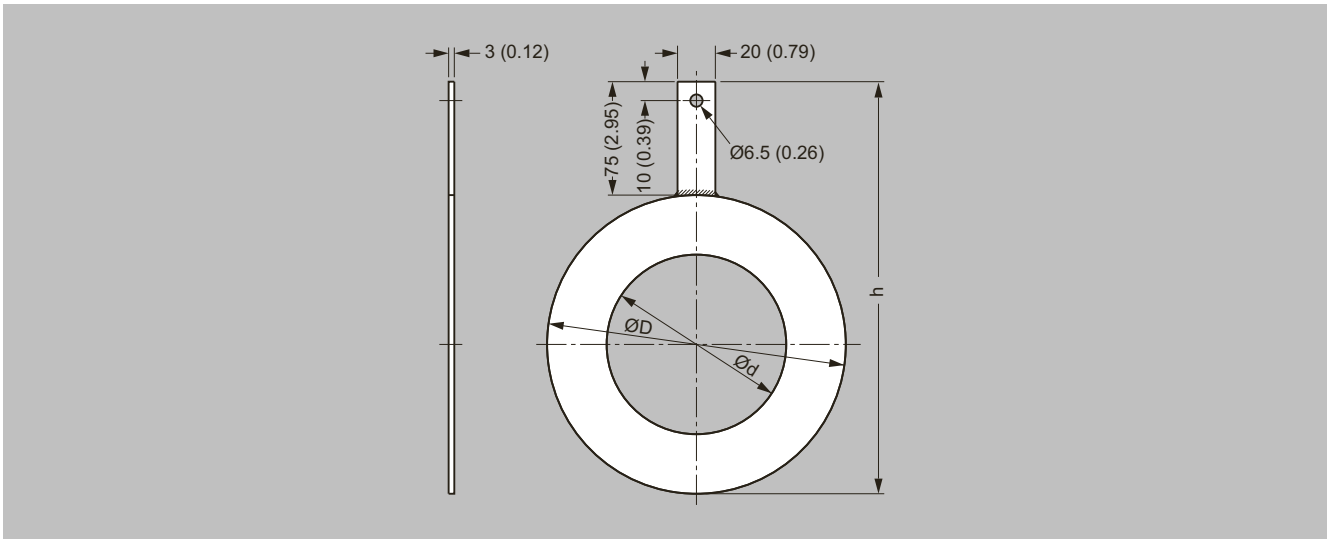
1) Tolerances on built-in length: DN 15 to DN 200 (½" to 8"): +0/-3 mm (+0/-0.12"), DN 250 to DN 400 (10" to 16"): +0/-5 mm (+0/-0.20"), DN 450 to DN 600 (18" to 24"): +5/-5 mm (+0.20/-0.20"), DN 700 to DN 1200 (28" to 48"): +10/-10 mm (+0.39/-0.39").
2) For remote version the sensor weight is reduced with 2 kg (4.5 lbs).

Remote version

Dimensions in mm (inch), weight 3.5 kg (8 lbs)

External battery pack

Dimensions in mm (inch), weight 2.0 kg (4.5 lbs)



Battery pack has to be mounted in upwards position to ensure maximum battery capacity.

## Circuit diagrams

Electrical installation and pulse output – Connection diagram

HL = Hardware lock key connection
V = Push button for verification mode

Pulse wire connection

The pulse output can be configured as volume, alarm or call-up. The output can be connected as positive or negative logic. R = pull up/down is selected in relation to the Vx power supply and with a max. current I of 50 mA.

Use shielded cable to avoid EMC problems. Make sure the shield is correctly mounted under the cable clamp (no pig tail).

## Overview

SITRANS FM MAG 8000 for abstraction and distribution network application

## Benefits

***Easy to install***

- Compact or remote solution with factory mounted cable
- IP68/NEMA 6P enclosure. Sensor can be buried
- Flexible power supply - internal or external battery pack or mains power supply with battery back-up possibilities

***Long-term stability/Low cost of ownership***

- No moving parts in a robust construction means less wear and tear
- Basic and advanced transmitter versions with different optional add-on communication modules fulfill various customer requirements for high cost efficiency
- Up to 0.2% maximum uncertainty
- Bi-directional measurement with an outstanding low flow performance
- Up to 10 years maintenance-free operation in typical applications

***Intelligent information, easy to access***

- Advanced information on site
- Advanced statistics and diagnostics
- Optional high-performance 3G/UMTS module offers an efficient solution for remote measurement and monitor via wireless networks

## Overview

SITRANS FM MAG 8000 CT, compact version

## Benefits

***Approvals***

- MI-001, OIML R 49/OIML R 49 MAA
- FM Fire Service

***Easy to install***

- Compact or remote solution with factory mounted cable and customer setting from factory
- IP68/NEMA 6P enclosure. Sensor can be buried.
- Flexible power supply - internal or external battery pack or mains power supply with battery back-up possibilities

***Long-term stability/Low cost of ownership***

- No moving parts in a robust construction means less wear and tear
- Basic and advanced transmitter versions with different optional add-on communication modules fulfill various customer requirements for high cost efficiency
- Bi-directional measurement with an outstanding low flow performance
- Up to 10 years maintenance-free operation in typical applications
- Insignificant pressure drop

***Intelligent information, easy to access***

- Advanced information on site
- Advanced statistics and diagnostics
- Connectable to common AMR systems

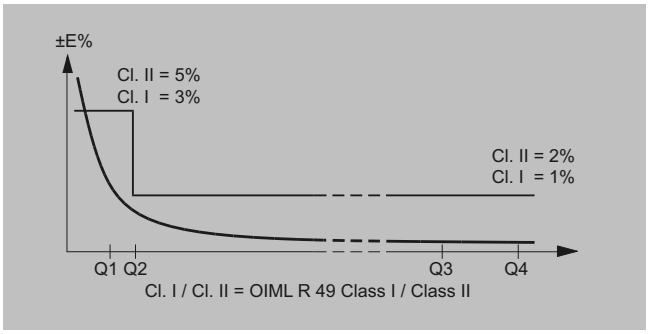
1) Has to be ordered with the meter. It is not possible to order the certificate afterwards.
2) Including Annex G
3) Not for sensors with 300 µm coating.
4) For further information on the PED standard and requirements see the section about Pressure Equipment Directive.
5) Siemens warrants the measurement accuracy down to a flow velocity of 15 mm/s. For a flow velocity below 15 mm/s, we don't warrant the measurement accuracy.
6) DN ≤ 600 type 01 (SORF); DN > 600 type 11 (WNRF)



### *MAG 8000 CT (Revenue program) water meter type approval*

MAG 8000 CT program is type approved and verified according to international water meter standard OIML R 49. The custody transfer program is approved as Class 1 (DN 50, DN 350 ... 600) and Class 2 (DN 50 ... 600), at different Q3 and Q3/Q1, according to OIML R 49:2013 specification.

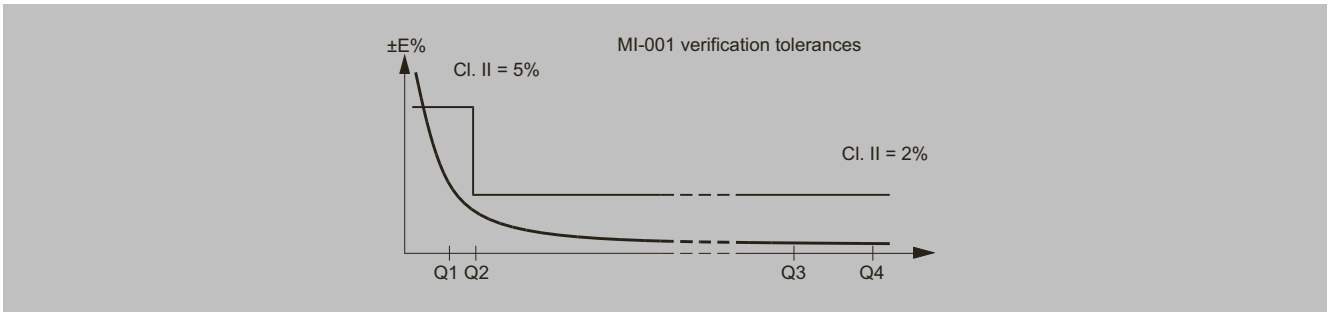
[1)] The product will be delivered according to requested specifications, which may deviate from the specifications of the approval frame described in tables below.

***MAG 8000 CT (Revenue program) MI-001***



MAG 8000 CT program is type approved according to international water meter standard OIML R 49. Since the first November 2006 the MI-001 water meter directive is in force, which means that all water meters can be sold across the EU borders if the water meters contain a MI-001 label.

The MAG 8000 CT MI-001 verified and labeled products are a Class II approval according to Directive 2014/32/EU of the European Parliament and Council of 26 February, 2014 on measuring instruments, Annex III Water meters (MI-001) in the sizes from DN 50 to DN 600.

The MID certification is obtained as a B + D module approval according to the above mentioned directive.

Module B: Type approval according to OIML R 49

Module D: Quality insurance approval of production

**MAG 8000 CT MI-001** verified and labeled products at a given Q3 and Q4/Q3 = 1.25 and Q2/Q1 = 1.6 measuring ranges see below table:

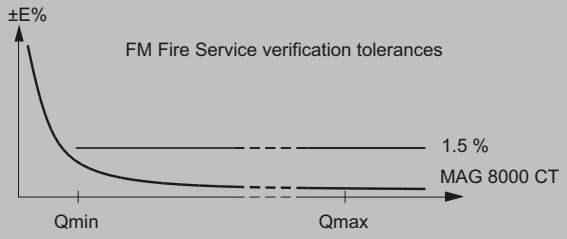
The Label is placed on the side of the encapsulation.
An example of the product label is shown below:

Installation conditions

Please refer to "System information SITRANS FM electromagnetic flowmeters".



Battery operation time and calculation

The battery operation time depends on the connected battery pack as well as the operation condition of the meter.

MAG 8000 calculates the remaining capacity every 4 hours and includes all consuming elements. Calculation compensates for temperature influence on battery capacity (drawing).

***MAG 8000 CT (7ME6820) for Fire Service applications***

MAG 8000 CT (7ME6820) is FM Fire Service approved for automatic fire protection systems according to the Fire Service Meters Standard, Class Number 1044. The approval is applicable for the sizes 50, DN 80, DN 100, DN 150, DN 200, DN 250, and DN 300 (2", 3", 4", 6", 8", 10", and 12") with ANSI B16.5 Class 150 flanges. The FM Fire Service approved product can be ordered via the Z-options P20, P21 and P22.

## Overview

IIoT Wireless Communication Module

The IIoT Wireless Communication Module[1)] for SITRANS FM MAG 8000 is a communication system consisting of a hardware part combined with a web-hosted application for device management and measurement data transfer. The main features of the module are to transmit periodically the flow readings from a MAG 8000 field device to an end user, real time notifications of alarms, online configuration, and remote diagnosis of the field device.

The IIoT Wireless Communication Module is using the public mobile network as channel for transferring the measurement data to the MAG 8000 IIoT Web Application, where only authorized users have access to. In addition, the IIoT Web Application serves as an interface for the end user to provide the measurement data per Email or FTP.

Communication between the field device and web application runs over MQTT protocol, which is a widely used protocol in the IoT (Internet of Things) world.

The IIoT Wireless Communication Module can be installed in the existing MAG 8000 with SW version 3.11 and higher. A Cat M1, NB-IoT or 2G network must be available at the installation site of the MAG 8000.

1) A rechargeable buffer battery is mandatory, even if the MAG 8000 is mains power operated.

## Benefits

The MAG 8000 IIoT Web Application provides options for remote configuration of all MAG 8000 parameters, remote diagnostics, remote qualification and communication via email, FTP / FTPS (TLS/SSL-based encryption).

This provides customers with the flexibility to receive data via email or FTP for the monitoring and control with SITRANS serveIQ or other systems anywhere in the world.

TLS/SSL based data encryption provides a highlevel information security to protect customers data privacy.

The IIoT Wireless Communication Module offers:

- LTE-M and NB-IoT communication with 2G fallback
- Remote Qualification Certificate feature to enable the offsite diagnostic and audit on devices installed anywhere in the world
- 2-channel analog input measurement for external ratiometric pressure transmitter, transmission together with flow measurement (2-in-1 solution)
- Real-time clock synchronization with internet NTP server, ensuring that all measurement data is accurately timestamped
- Data transmission at customer-specified points in time, allowing for synchronization of information from multiple MAG 8000 devices. The package of information retrieved via the csv file includes:
  - Time stamp
  - Flow rate
  - Totalizer 1
  - Totalizer 2
  - Totalizer 3
  - Analog 1 (V)
  - Analog 2 (V)
  - Battery lifetime
  - Alarm list (as decimal format)

## Overview

3G/UMTS communication module

PC-IrDA connection

***MAG 8000 3G/UMTS Wireless Communication Module***

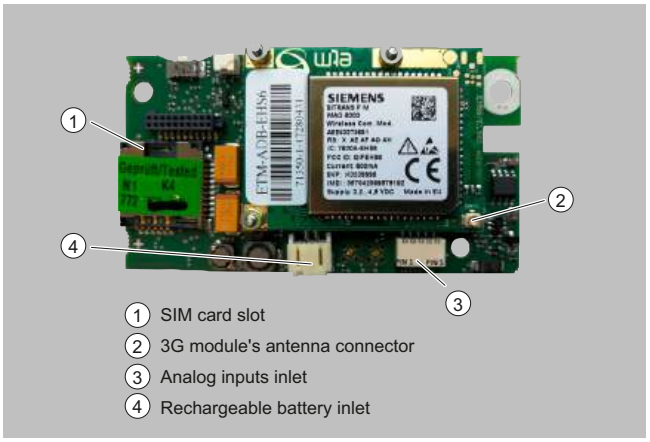
The 3G/UMTS wireless communication module is a compact built-in solution which can be installed in the existing MAG 8000 with SW version 3.02 and higher, supporting HSDPA cat. 8/HSUPA Cat.6 at 5 UMTS bands, with the ability to fall back to GSM/GPRS network in case there is no 3G signal. The 3G/UMTS module collects comprehensive measurement data from MAG 8000 at an interval down to 1 minute, allows for data transmission via numerous protocols including SMS, email via SMTP, email via SMTPS (TLS/SSL-based encryption), FTP, and FTPS (TLS/SSL-based encryption, implicit), with a customer configurable transmission interval (down to 1 hour). This provides customers with the flexibility to receive data via email, FTP or text message for the monitoring and control systems anywhere in the world.

TLS/SSL based data encryption provides a high level information security to protect customers data privacy.

The 3G/UMTS module offers:

- Remote Qualification Certificate feature to enable the offsite diagnostic and audit on devices installed anywhere in the world
- 2-channel analog input measurement for external ratiometric pressure transmitter, transmission together with flow measurement (2-in-1 solution)
- 4-20 mA alarm signal detection and realtime SMS alarm for tamper protection and flooding situations
- Real-time clock synchronization with internet NTP server, ensuring that all measurement data is accurately timestamped
- Data transmission at customer-specified points in time, allowing for synchronization of information from multiple MAG 8000 devices

The OPC server specifically designed for the MAG 8000 3G/UMTS module is offered free of charge. With this value-added package, the



## Overview (continued)

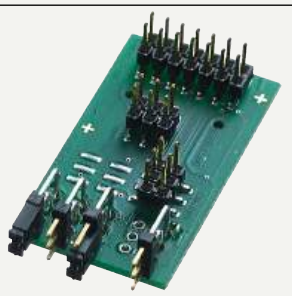
opportunity for measurement data collection and further processing/analyzing for system integration and automation is offered.

The package of information retrieved via the csv file includes:

- Time stamp
- Flow rate
- Tot 1
- Tot 2
- Tot 3
- Analog 1 (mA)
- Analog 2 (V)
- Battery lifetime
- Alarm list (as decimal format)

***Electrical installation of 3G/UMTS module***

1 SIM card slot
2 3G module's antenna connector
3 Analog inputs inlet
4 Rechargeable battery inlet



A rechargeable buffer battery is mandatory, even if the MAG 8000 is mains power operated.

## Overview

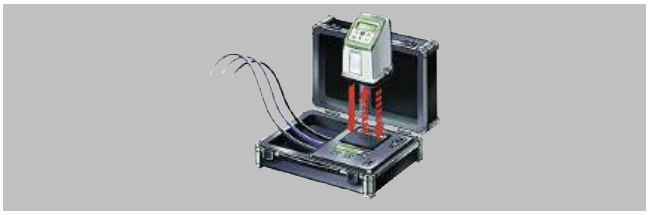
The SITRANS FM Verificator is an external tool designed for MAG 5000 and MAG 6000 with MAG 1100, MAG 1100 F, MAG 3100, MAG 3100 P or MAG 5100 W sensors to verify the entire product, the installation and the application.

The goal is to improve operation, reduce downtime and maintain measurement accuracy as long as possible.

The SITRANS FM Verificator is highly advanced and carries out the complex verification and performance check of the entire flowmeter system, according to unique SIEMENS patented principles. The whole verification test is automated and easy to operate so there is no opportunity for human error or influence. The system is traceable to international standards and tested by WRc (Water Research Council).

- Stand alone Verificator to measure a number of selected parameters in the flow sensor and a transmitter which affects the integrity of the flow measurement.
- Up to 20 measurements can be stored in the Verificator.
- The Verificator can be connected via a serial cable to a PC enabling download of the data. A Windows program enables printing and management of verificator reports.

## Mode of operation



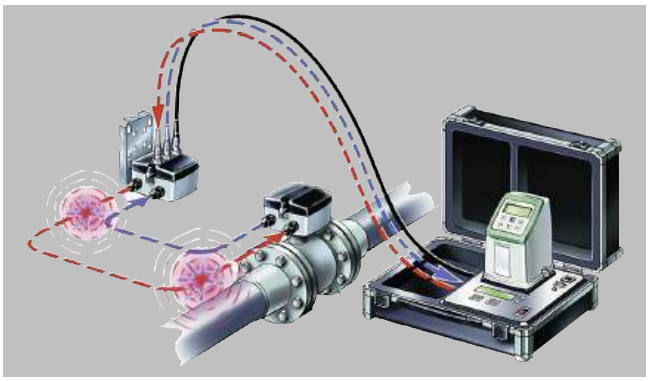
***Verification - Steps***

Verification of a SITRANS FM flowmeter consists of the following test routines:

1. Transmitter test
2. Flowmeter and cable insulation test
3. Sensor magnetism test

1. Transmitter test

The transmitter test is the traditional way of on-site testing on the market and checks the complete electronic system from signal input to output.



Transmitter test

Using the excitation power output, which is generated to drive the magnetic field of the sensor, the verificator simulates flow signal to the transmitter input. By measuring the transmitter outputs the verificator calculates its accuracy against defined values. Test includes:

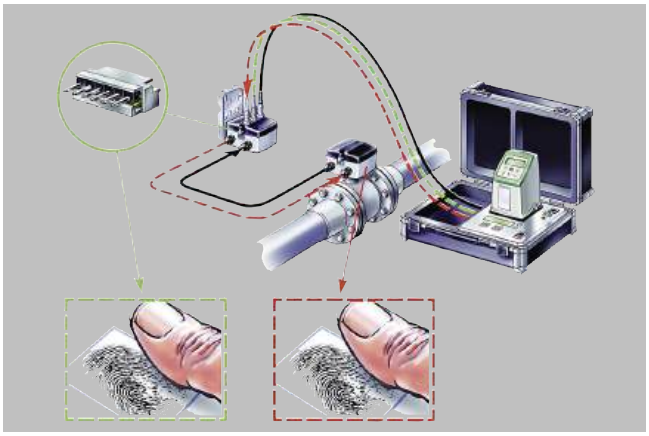
- Excitation power to drive the magnetic field
- Signal function from signal input to output
- Signal processing – gain, offset and linearity
- Test of analogue and frequency output

2. Insulation test

Flowmeter insulation test

The verification test of the flowmeter insulation is a “cross-talk” test of the entire flowmeter which ensures that the flow signal generated in the sensor is not affected by any external influences.

In the “cross-talk” test the verificator generates a high voltage disturbance within the coil circuit and then looks for any “cross-talk” induced in the flow signal circuit. By generating dynamic disturbances close-coupled to the flow signal, the flowmeter is tested for noise immunity to a maximum level:



- EMC influence on the flow signal
- Moisture in sensor, connection and terminal box
- Non-conductive deposit coating the electrodes within the sensor
- Missing or poor grounding, shielding and cable connection

© Siemens AG 2024

## Mode of operation (continued)

3. Sensor magnetism test

Sensor magnetism test

The verification of the sensor magnetism is a "boost" test of the magnetic field coil. The test ensures that the magnetism behaviour is like the first time, by comparing the current sensor magnetism with the "fingerprint" which was determined during initial calibration and stored in the SENSORPROM memory unit.

In the "boost" test the verificator changes the magnetic field in certain pattern and with high voltage to get quick stable magnetic condition. This unique test is fulfilled without any interference or compensation of surrounding temperature or interconnecting cabling.

- Changes in dynamic magnetic behaviour
- Magnetic influence inside and outside the sensor
- Missing or poor coil wire and cable connection

***Certificate***

The test certificate generated by a PC contains:

- Test result with passed or failed
- Installation specification
- Flowmeter specification and configuration
- Verificator specification with date of calibration ensuring traceability to international standards.

## Overview

In-situ verification tool SITRANS Verificator

The SITRANS Verificator is the next generation in-situ verification device for use with a various of SITRANS FM flow meters. The battery powered device carries out a complex verification and performance check of the entire flowmeter system. The whole verification test is fully automated and can be controlled using a mobile software application via the Bluetooth interface.

Key features

- In-situ check of performance without interrupting the flowmeter installation
- Simple method of checking product health
- Easy-to-use connection to your device
- Automated input/output tester
- Field-replaceable battery
- Full verification test with one click
- Generation of verification test certificate
- Fast feedback of device condition
- Easy emailing of verification test certificate in the field
- Condition monitoring for predictive maintenance to optimize asset reliability
- Full traceability – Annual certification of verification system insures complete documentation for regulatory and ISO standards compliances
- Always up to date through periodic recalibration and service checks

The software application SITRANS mobile IQ gives you easy access to the SITRANS Verificator via your smartphone or tablet.

Download the software application SITRANS mobile IQ for free and activate the verification license to provide the best possible check of measurement accuracy, without stopping your process. The validation device verifies the condition and performance of the device under test. With the mobile IQ software, test reports can be generated and stored locally for further analysis on the mobile device.

License model

To perform a verification, a token-based license (pay-per-use) must be purchased and activated for the Verificator. This is a hardware-locked license that can only be assigned to one SITRANS Verificator at a time. After activation the license validity is 12 months (plus 2 months grace period). Various license packs are available:

## Overview (continued)

- Basic 1 (20 tokens)
- Basic 2 (50 tokens)
- Pro 100 (100 tokens)
- Pro 200 (200 tokens)
- Pro 300 (300 tokens)
- Premium (unlimited tokens)

Supported products

The SITRANS Verificator confirms accurate performance for the following SITRANS FM products:

- FMS500 flow sensor
- FMT020 flow transmitter

© Siemens AG 2024

## Benefits

External verification

The inspection of the flowmeter is carried out by an external verification device. During the entire testing process, the verification device is connected to the flowmeter via test interfaces, and a functional test is carried out by simulating calibrated reference signals and observing system response.

- Traceable check of entire electromagnetic flowmeter by performing functional tests using injected reference signals for flow simulation
- Qualitative assessment based on a pass-fail criterion
- Verificator calibration concept according to ISO 17025 standards ensuring long term stability of the external test system
- Metrologically traceable factory references for user confidence
- Annual calibration of verification system to meet ISO 9001 quality regulations

Test coverage

- Signal input processing - Linearity of the amplifier
- I/O processing - Current and digital output
- Crosstalk measurement
- Insulation resistance
- Coil boost time (“Fingerprint”)
- Coil resistance

Device status

The verification device itself includes LED indicators to advise operation status:

- Bluetooth connection
- Instrument detected
- Under test (verification in progress)
- Device power ON indicator
- Battery condition

Mobile software application

The SITRANS Verificator is designed to be connected to the software application SITRANS mobile IQ running on an Android and iOS mobile device in order to communicate information and data via the Bluetooth interface.

- Easy to operate testing of product performance and maintenance needs
- Detailed certificate printing for regulatory and quality system management
- Move from reactive to predictive maintenance planning with historical data analysis
- Local data storage capabilities

Verification test certificate

The test certificate generated by the SITRANS mobile IQ software application contains:

- Test result with passed or failed
- Detailed measurement results for all verification tests
- Customer and operator information
- Flowmeter specification and configuration

## Benefits (continued)

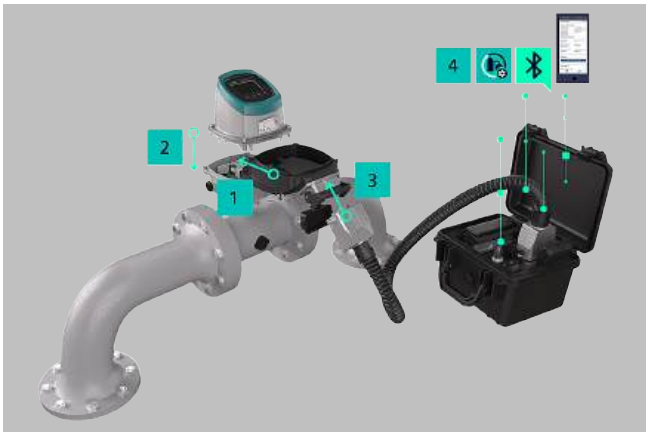
- Verificator specification with date of calibration ensuring traceability to international standards.

## Application

The SITRANS Verificator can be used in:

- New applications: to approve new installations with valid certificate for handover
- Existing applications: to ensure correct product quality and continuous accuracy
- To confirm that a flowmeter fulfills certain technical requirements of functionality as defined by the manufacturer
- As assessment tool to produce a qualitative statement about the product stability

© Siemens AG 2024



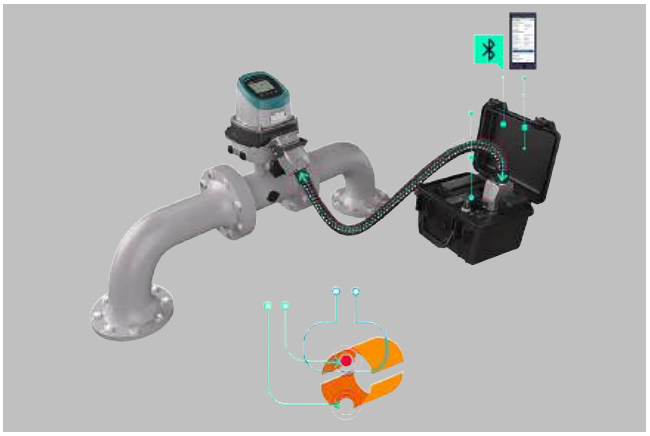
## Mode of operation

***Test functions***

Transmitter test

The transmitter verification checks the whole electronic system from signal input to output. Using a traceable calibrated precision network, the Verificator simulates flow signals to the transmitter input. By measuring the transmitter outputs, the Verificator calculates its accuracy against defined factory values.

- Signal function from signal input to output
- Signal processing – gain, offset, and linearity
- Test of current and digital output



Transmitter test: Steps for connecting SITRANS Verificator to SITRANS FMx20

Insulation test

The verification test of the flowmeter insulation is a “crosstalk” test of the entire flowmeter and installation, which ensures that the flow signal generated in the sensor is not affected by any external influences. By generating dynamic disturbances close coupled to the flow signal, the flowmeter is tested for noise immunity to a maximum level.

- EMC influence on the flow signal
- Moisture in sensor, connection and terminal box
- Non-conductive deposit coating the electrodes
- Missing or poor grounding, shielding and cable connection

## Mode of operation (continued)

Flowmeter insulation test

Coil circuit test

The verification of the coil circuit is an integrity check of the sensor magnetic field coil. The test ensures that the magnetism behavior is like the first time, by comparing the current sensor magnetism with the “fingerprint” (coil boost time) which was determined during initial calibration and stored in the SENSORPROM memory unit.

In the “Coil Boost Time” test the Verificator changes the magnetic field in certain pattern and with high voltage to get quick stable magnetic condition. This unique test is performed without any interference or compensation of surrounding temperature or interconnecting cabling.

- Changes in dynamic magnetic behaviour
- Magnetic influence inside and outside the sensor
- Missing or poor coil wire and cable connection

Fingerprint test

## Overview

SITRANS FC is the range of Siemens Coriolis mass flowmeters that provides high performance process measurements. The extensive portfolio provides multi-parameter measurement solutions for all fluid types, including liquids, gases and multi-phase fluids.

Primary measurements of mass flow, density and temperature are available immediately on device start-up.

SITRANS FC also calculates multiple secondary measurements including:

- Fraction (or concentration)
- Liquid volume flow
- Normal (standard) volume flow of gases
- Viscosity (requires external input)
- Thermal energy

Siemens measurement experts are available globally. They provide application guidance to optimize the whole life value of SITRANS FC multi-parameter instruments, across all process industry sectors.

Diligence in the design, carried through manufacturing and calibration, is evident in the solution-specific range of sensors and transmitters, described on the following pages.

***Product overview***

## Benefits

| | User value targets | SITRANS FC features and solutions |
|---|---|---|
| **Engineering and project management** | • Reduce engineering investment<br>• Cut specification effort<br>• Minimize project expenditure<br>• Decrease the spending on each measurement point<br>• Eliminate function duplication<br>• Reduce number of suppliers | • Siemens project teams offer complimentary evaluation of customer specifications, provided by regional and HQ experts<br>• Simple product selection using intuitive sizing software<br>• One SITRANS FC device can typically provide 3 to 6 individual measurements, all transmitted via digital communication, when planned during pre-project design<br>• Added value functions: batch control, viscosity, thermal energy, concentration measurement (Fraction) of two-component solutions, and pressure compensation |
| **Installation** | • Reduce footprint and transport outlay of OEM machinery<br>• Lower installation complexity<br>• Avoid costly modifications of existing plant | • Can be installed in horizontal or vertical (self-draining) pipes<br>• Twin tube bend design delivers strong signal to noise characteristic resistant to external influence, so install in tight spaces with no inlet and outlet restrictions<br>• Adaptable to existing pipes: typically, 3 or 4 connection sizes for each sensor size<br>• Flexible selection of traditional inputs, outputs, and digital communications |
| **Configuration and commissioning** | • Shorter commissioning schedules with lower costs<br>• Faster start-up with reduced outgoings | • Easy setup wizard delivers working meters straight after start-up<br>• microSD card stores sensor calibration data and default setup<br>• Simple configuration using Process Device Manager (PDM)<br>• Siemens device-specific faceplates simplify operation in plantwide control systems |
| **Efficient plant operation** | • Improve finished product consistency to reduce waste<br>• Keep process performance when scaling production up or down<br>• Optimize process control<br>• Improve finished product quality enabling higher levels of profit<br>• Reduce downtime with fast resolution of process upsets<br>• Improve asset performance | • SITRANS FC meters are calibrated in rigs accredited to EN/ISO 17025 to ensure consistently high performance of flow, density, and concentration measurements<br>• First-class zero-point quality maintains high accuracy into the low flow region<br>• High sensitivity and intelligent dynamic range keeps the measurement active in demanding high fluid damping cases<br>• Designed-in resilience to process extremes<br>• Self-verification alerts to potential performance issues due to unplanned process events, for example gas or vapor breakout or solid deposits building up in the tubes<br>• Diagnostic data via local menu or PDM is backed by Siemens applications experts<br>• Intelligent Siemens SITRANS IQ apps for continuing asset evaluation |
| **Maintenance and asset management** | • Optimize technician training<br>• Reduce cost of spare parts<br>• Increase predictive maintenance<br>• Reduce production downtime and associated costs<br>• Decrease unplanned maintenance<br>• Maximize asset value | • Simple product design with interchangeable modular parts<br>• microSD card loads sensor-specific data to deliver fast service exchange<br>• Self-verification: tube health check monitors key diagnostics, including tube stiffness, driver and pickups; the user defines verification frequency and alarm behavior<br>• Verification results indicate whether preventive maintenance action is required<br>• Siemens SIMATIC Maintenance Station uses cyclical acquisition to provide life cycle reports and intelligent preventive maintenance strategies |
| **Industry compliance** | • Cut effort required to comply with Industry-specific demands<br>• Reduce resource needed to maintain regulatory compliance | • Food and beverage sector covered with EHEDG and 3-A approvals, polished tubes<br>• Global hazardous area approvals for international plant duplications<br>• Common and emerging digital networks covered: HART, PROFIBUS PA, PROFINET<br>• Class-leading safety: SIL2/SIL3, secondary containment, PED, NAMUR NE95 |

© Siemens AG 2024

## Application

***The SITRANS FC Coriolis family provides flexibility to the user including***

- Choice of sizes from DN 1 to DN 250
- Choice of performance levels
- Optionally selectable functions, approvals and certification
- Selection of sensor types, process connections and materials to suit specific application demands
- Resistance to extreme process conditions where necessary

This flexibility and extensive range of options means an excellent value solution is available for routine and challenging applications alike, with no industry sector excluded.

***Generic measurement and application examples found in all industry sectors***

- Mass flow rate, density and temperature of liquids, gases, and mixed phase fluids
- Bulk volume flow rate of all fluid types
- Concentration measurement (fraction) of two-component slurries, solutions and mixtures
- Fractional mass flow rate of each component in a two-component fluid (net flow)
- Fractional volume flow rate of each component in a two-component fluid (net flow)
- Single or two stage batch control
- Viscosity measurement (requires differential pressure via analog input or digital communication)
- Thermal energy measurement
- Accumulated (totalized) mass and volume values of the bulk fluid and each fractional component
- Finished product filling and dosing into appropriate containers

During the selection of any SITRANS FC Coriolis flow meter it is important to obtain sufficient application data. The application checklist below provides guidance on what to look out for.

***Application checklist***

- Name of fluid?
- What type of fluid are you measuring – gas, liquid, slurry, other?
- Fluid properties and operating conditions – density, viscosity, temperature, pressure?
- Measurement(s) required: mass flow, volume flow, density, concentration, temperature?
- Expected flow rates – minimum, normal, maximum?
- Any hazardous area or corrosive properties?
- Adjacent pipe layout, disturbances (e.g. valves, bends)?
- What are the priorities – accuracy, installation and running costs, approvals?
- Power supply and outputs – analog, digital network?
- Will periodic verification or re-calibration be required – consider isolation valves, and bypass?

## Application (continued)

***Application examples for SITRANS FC multi-parameter meters across diverse industry sectors***

| Industry sector | Application |
|---|---|
| **Chemical and petrochemical**<br>Bulk chemicals<br>Industrial gases<br>Polymers<br>Agrochemicals<br>Fine chemicals<br>Aroma chemicals | • Transfer, loading and unloading of bulk chemicals<br>• Concentration control of acids and alkalis (process optimization)<br>• Accurate mass or volume flow of feed chemicals to in-line blending systems<br>• Accurate mass flow and density (quality) of reactor fluid feeds catalyst<br>• Chemical recovery<br>• Mass balance optimization<br>• Compressed and cryogenic gases<br>• Lubricating oil blending and dosing<br>• High-accuracy measurement of critical fluid components<br>• Low flow control in pilot plants and R&D facilities |
| **Food and beverage**<br>Food processing<br>Dairies<br>Breweries<br>Distilleries<br>Confectionary<br>Soft drinks<br>Animal feed plants<br>OEM | • Accurate bulk transfer (mass or volume) of all dairy products: milk, cream, whey and yoghurt<br>• Fat concentration in cream<br>• Flow, density, temperature, and concentration (Plato) during all fermentation processes<br>• Flow, density, temperature, and sugar concentration (Brix) in soft drink processing<br>• Distilled spirits – % alcohol by volume (ABV), liters of pure alcohol, volume transfer, blending, batch and column still optimization and energy management, cask filling, tanker loading<br>• Flow and density of fruit juices and pulps<br>• Mixing and inventory control of confectionary ingredients, e.g. chocolate, syrup, oils, flavors<br>• Metering pump control<br>• Oils, fat enzymes dosing in animal feed plants<br>• $CO_2$ dosing<br>• CIP liquids<br>• Bottling of beer, spirits, wine, soft drinks, etc.<br>• Bulk sugar processing – molasses, sugar slurries, density, Brix of finished product |
| **Oil and gas**<br>Offshore, onshore<br>Upstream, downstream<br>Pipelines<br>Distribution networks<br>Refineries<br>Skid manufacturers | • Loading/unloading of hydrocarbons (e.g. crude oil, bitumen) from/to ship, road tanker, rail car<br>• High-pressure chemical injection<br>• High-pressure low flow gas<br>• Net oil computing<br>• Gas void fraction<br>• Filling of gas bottles<br>• Furnace control<br>• Test separators<br>• LPG, natural gas hydration<br>• Well-head water-cut monitoring<br>• All hydrocarbon fluids in refineries<br>• Metrology, custody transfer<br>• Drilling mud<br>• Oil well cementing and hydrofracturing |

## Design

Each SITRANS FC Coriolis mass flowmeter is built from one SITRANS FCS sensor and one SITRANS FCT transmitter. FCS sensors have a common twin tube U-shaped design.

The four available sensor types are defined by size, wetted part materials, pressure and temperature rating, and process connection type. Generally, sensors can be combined with compact or remote mounted transmitters.

Two transmitter versions, FCT020 standard and FCT040 advanced, provide a choice of performance, measurement functions, housing material and output types.

***Examples***

Compact mount

FCS600 resistant sensor with FCT020 standard transmitter becomes a complete FC620 Coriolis flowmeter. Specification of sensor size, transmitter and process connections is required.

FC620 Coriolis flowmeter

Remote mount

FCS600 resistant sensor with FCT040 advanced transmitter becomes a complete FC640 Coriolis flowmeter.

Specification of sensor size, terminal housing design, transmitter, process connections and cable are required.

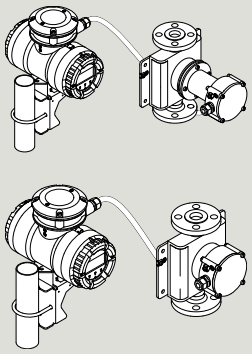
FCS600 sensor

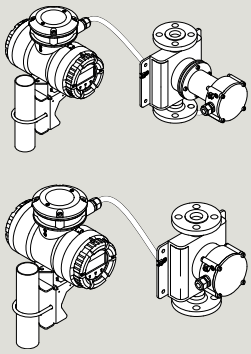
FCT040 transmitter

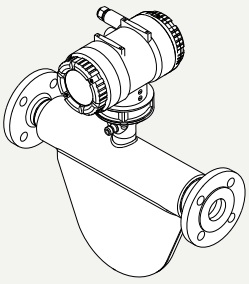
FCS100 precision sensors (sizes DN 1 to DN 8) are compatible with remote mounted transmitters only.

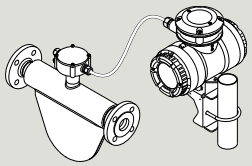
Other example

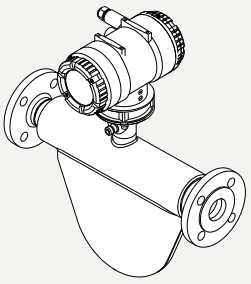
FCS100 precision sensor with remote FCT020 standard transmitter becomes a complete FC120 Coriolis flowmeter.

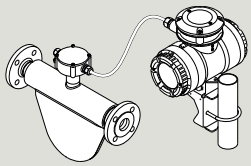


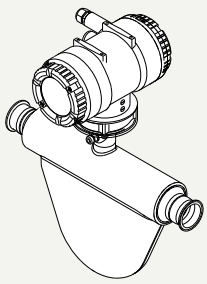


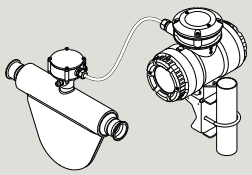


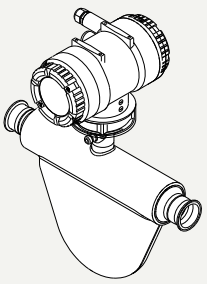


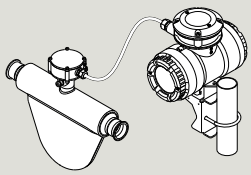












The following table shows a more complete interpretation of available combinations and the compatibility between sensors and transmitters.

1) FC140 meters in sizes DN 1 and DN 2 have 0.2% liquid mass flow accuracy.
2) Some sensor sizes do not have 0.5 kg/m³ (0,03 lb/ft³) density accuracy with FCT040 transmitters. Refer to technical specifications for more details.
3) Some sensor sizes do not have 4 kg/m³ (0,25 lb/ft³) density accuracy with FCT020 transmitters. Refer to technical specifications for more details.
4) Some sensor sizes do not have 0.35% gas mass flow accuracy with FCT040 transmitters. Refer to technical specifications for more details.
5) Maximum pressure ratings may be lower than shown, depending on the type of process connection (fitting) selected. Refer to the technical specifications for more details.
6) With hygienic thread fittings temperature range is -50 ... +140 °C (-58 ... +284 °F).
7) With hygienic clamp fittings temperature range is -10 ... +140 °C (14 ... 284 °F).
8) Long neck sensor option is mandatory for low (cryogenic), medium and high temperature ranges.
9) Hygienic fittings cannot be selected with low (cryogenic), medium and high temperature ranges.

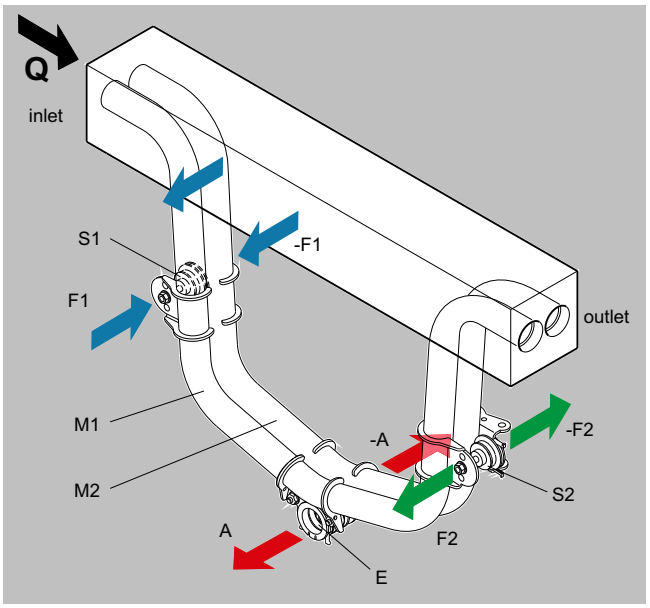
## Mode of operation

***The Coriolis Effect***

Gaspar-Gustave de Coriolis (1792–1843) was a French mathematician, mechanical engineer and scientist. His work explained the supplementary forces detected in a rotating frame of reference, one of which would eventually bear his name.

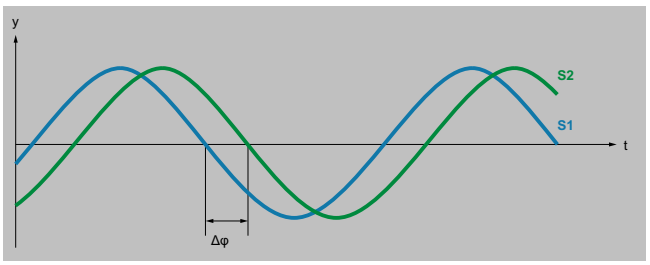
Imagine that the rotating sphere in the sketch below is the earth, with the viewer looking down from above. When a ball is thrown from the top of the sphere (north pole) several forces act upon it including centrifugal force and gravity. Our focus is on the Coriolis force which acts perpendicular to the flight of the ball and opposite to the direction of rotation. The path of the ball is shifted to the right, away from its intended path due to the Coriolis effect.



Coriolis force: effect on the direction of rotation

Inside the Coriolis flowmeter an oscillating system is used in place of continuous rotation.

SITRANS FC sensors are energized by an electromagnetic driver which causes the twin measuring tubes to oscillate at their resonant frequency. The oscillation generates back and forth rotation at the tube ends, close to the electromagnetic pickups S1 and S2.



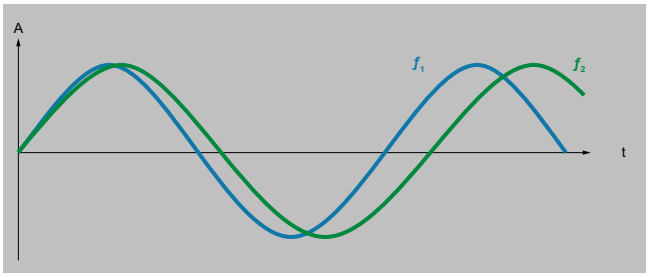
## Mode of operation (continued)

| | |
|---|---|
| M1, M2 | Measuring tubes |
| S1, S2 | Pick-offs |
| F1, F2 | Coriolis forces |
| E | Driver system |
| A | Direction of measuring tube vibration |
| Q | Direction of fluid flow |

When the fluid in the rotating system is not flowing, there is no Coriolis force. As fluid starts to flow, Coriolis forces are generated (*F1* and *F2*), together with a phase shift (time difference) between the output of pickups.

The phase shift is directly proportional to the **mass flow rate** of the flowing fluid, and it can be measured with high accuracy.

Mass flow rate proportional to phase shift



| | |
|---|---|
| Δφ | Phase shift |
| t | Time |
| S1, S2 | Pick-offs |

**Fluid density** becomes the second primary measurement, achieved using the inverse relationship between fluid density and tube resonant frequency. Fluid 2 frequency $f_2$ is lower than fluid 1 frequency $f_1$, therefore fluid 2 has a greater density than fluid 1.

© Siemens AG 2024

## Mode of operation (continued)

Density inversely proportional to frequency

| | |
|---|---|
| A | Measuring tube displacement |
| t | Time |
| $f_1$ | Resonance frequency with fluid 1 |
| $f_2$ | Resonance frequency with fluid 2 |

The third primary measurement, **temperature**, is made using a PT1000 temperature sensor.

© Siemens AG 2024

## Function

Before making out your order for Coriolis flowmeters, why not let Siemens measurement experts help with the planning and specification of your new plant or existing process upgrade. Coriolis meters can be expensive, but not when you use the proven multi-measurement power to get real value from your investment by loading all the potential functionality into a single device.

Primary measurements

Make use of the three independent primary process variables, measured simultaneously and continuously.

Mass flow rate with liquid accuracy up to 0.1% of actual flow

Directly proportional to the phase shift measured between the two pickups mounted at either end of the oscillating tubes – the shift is created by the naturally occurring Coriolis forces acting on the tubes whenever fluid flows through.

In-line fluid density with choice of accuracies to suit your application

Inversely proportional to the oscillating system's resonant frequency. The tubes are driven to resonance with an electromagnetic driver circuit flexible enough to allow the tubes to find their natural resonant frequency, defined by the density of the fluid passing through.

Process temperature

Provided by the process industries' go to high resolution device, a PT1000 resistance temperature detector (RTD).

Secondary measurement possibilities

No need to stop at three measurements, but instead take advantage of the computing ability of the SITRANS FCT020 or FCT040 transmitters to make secondary measurements.

Volume flow rate

Both transmitters, FCT020 standard and FCT040 advanced, calculate volume flow from mass flow and density using the simple school physics formula: density = mass / volume.

FCT040 secondary measurements

Measurements below are available only with the SITRANS FCT040 advanced transmitter.

Standard concentration

Used for concentration measurements of emulsions or suspensions when fluid density depends largely on temperature.

The standard concentration measurement can be used for many low-concentration solutions if there is only minor interaction between the liquids or if the miscibility is negligible.

Fraction (advanced concentration)

Up to four pre-configured fraction ranges can be selected using the SITRANS FC option order codes from the table below.

| Order code | Fraction description | Type | Range | Unit | Temperature range |
|---|---|---|---|---|---|
| **G01** | Sugar / water (sucrose solution) | Mass fraction | 0 ... 85 | °Bx | 0 ... 80 °C (32 ... 176 °F) |
| **G02** | NaOH / water (sodium hydroxide solution) | Mass fraction | 2 ... 50 | % | 0 ... 100 °C (32 ... 212 °F) |
| **G03** | KOH / water (potassium hydroxide solution) | Mass fraction | 0 ... 60 | % | 54 ... 100 °C (129 ... 212 °F) |
| **G04** | $NH_4NO_3$ / water (ammonium nitrate solution) | Mass fraction | 1 ... 50 | % | 0 ... 80 °C (32 ... 176 °F) |
| **G05** | $NH_4NO_3$ / water (ammonium nitrate solution) | Mass fraction | 20 ... 70 | % | 20 ... 100 °C (68 ... 212 °F) |
| **G06** | HCl / water (hydrochloric acid) | Mass fraction | 22 ... 34 | % | 20 ... 40 °C (68 ... 104 °F) |
| **G07** | $HNO_3$ / water (nitric acid) | Mass fraction | 50 ... 67 | % | 10 ... 60 °C (50 ... 140 °F) |
| **G09** | $H_2O_2$ / water (hydrogen peroxide) | Mass fraction | 30 ... 75 | % | 4 ... 44 °C (39 ... 111 °F) |
| **G10** | Ethylene glycol / water (homogenous mixture) | Mass fraction | 10 ... 50 | % | -20 ... +40 °C (-4 ... +104 °F) |
| **G11** | Amylum (starch) / water (paste-like suspension) | Mass fraction | 33 ... 43 | % | 35 ... 45 °C (95 ... 113 °F) |
| **G12** | Methanol / water (homogenous mixture) | Mass fraction | 35 ... 60 | % | 0 ... 40 °C (32 ... 104 °F) |
| **G20** | Alcohol / water (homogenous mixture) | Volume fraction | 55 ... 100 | % | 10 ... 40 °C (50 ... 104 °F) |
| **G21** | Sugar / water (sucrose solution) | Mass fraction | 40 ... 80 | °Bx | 75 ... 100 °C (167 ... 212 °F) |
| **G30** | Alcohol / water (homogenous mixture) | Mass fraction | 66 ... 100 | % | 15 ... 40 °C (59 ... 104 °F) |
| **G37** | Alcohol / water (homogenous mixture) | Mass fraction | 66 ... 100 | % | 10 ... 40 °C (50 ... 104 °F) |

Fraction A & B volume flow rate (net flow computing)

Example: In an alcohol application the net volume flow rate of each component of the mixture can be displayed and transmitted. So, volume flow of ethanol (fraction A) and volume flow of water (fraction B) are both available.

Fraction A & B mass flow rate (net flow computing)

Like the volume example but with mass flow units for each fraction.

Petroleum measurement function / Net oil computing (NOC)

The NOC function provides real-time measurements of water cut and includes American Petroleum Institute (API) correction according to API MPMS Chapter 11.1.

Oil sometimes contains entrained gas. SITRANS FC meters measure the density of the combined emulsion oil and gas, which is lower than the oil density. The NOC function includes a Gas Void Fraction (GVF) parameter to be set.

Viscosity measurement

Viscosity is sometimes used as reference value to activate other processes like fluid heating systems.

© Siemens AG 2024

## Function (continued)

The viscosity estimation is calculated based on a comparison between measured pressure loss and a calculated value between two points of the pipe. A differential pressure transmitter is required to use this function. Its output is connected to the analog input of the FCT040. Based on an iteration process, a viscosity value is determined.

Thermal energy calculation (heat quantity measurement)

Either a constant value of the calorific value of the fluid can be used, or an additional device like a gas chromatograph can provide the instantaneous calorific value via the analog input of the FCT040 transmitter.

Based on the fluid flow, the total calorific energy of the fluid is calculated.

***Additional functions available with SITRANS FC Coriolis flowmeters***

Tube health check

This feature is available in both transmitters, FCT020 and FCT040.

Tube health check monitors key diagnostics, including tube stiffness, driver and pickups. Self-verification alerts to potential performance issues due to unplanned process events, for example gas or vapor breakout, or solid deposits building up in the tubes. The user defines verification frequency and alarm behavior. Verification results indicate whether preventive maintenance action is required.

Six totalizers

A maximum of six totalizers can be used on the device to provide accumulation of process flow variables, including:

- Mass flow
- Volume flow
- Corrected volume flow
- Energy

When a concentration option has been selected in the order code, additional variables can be assigned to the totalizers:

- Net mass flow, component A or B
- Net volume flow, component A or B
- Net corrected volume flow

Universal power supply

Single power supply compatible with DC and AC supply voltage

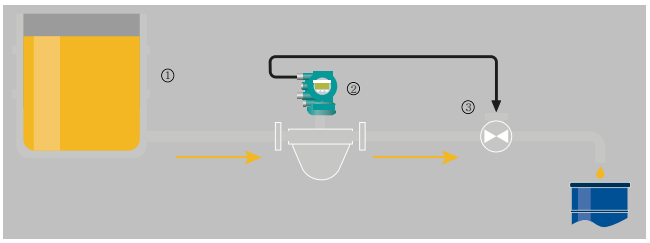
Easy Setup Wizard

For the most important functions, there is a wizard menu to help set up common parameters used in many applications, such as date, installation, display, outputs and totalizers.

Event Management

According to NAMUR NE107

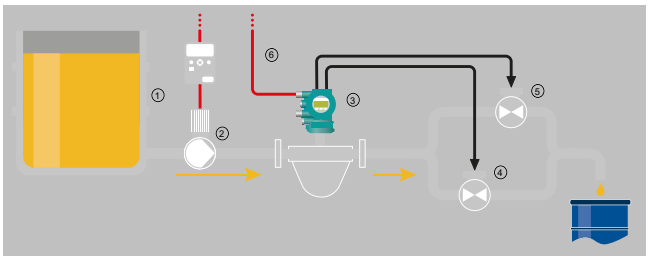
Batch control



Batching and filling processes are found in many industries: food and beverage, cosmetic, pharmaceutical, oil and gas, and chemical.

SITRANS FCT040 transmitters offer an integrated batching function to carry out the task. A self-learning algorithm optimizes the process to provide accurate and reliable results.

The function supports two filling modes:



- Single-stage batch control with single valve
- Two-stage batching to control two valves for more accurate filling

The error management function allows the user to set alarms and warnings according to the application.

## Technical specifications

***Mass flow rate of liquids***

The mass flow rate characteristics of SITRANS FC meters are defined by the values of zero stability, $Q_{flat}$, $Q_{nom}$ and $Q_{max}$.

Zero stability is the maximum allowable flow rate value that can be displayed at zero flow under reference conditions. It is a good indicator of the meter performance as flow rates reduce, and approach zero.

$Q_{flat}$ is the mass flow rate above which the base accuracy is maintained (0.1% when using FCT040 transmitters).

$Q_{nom}$ is the nominal mass flow rate of water at reference conditions that would result in a pressure drop of 1 bar (15 psi).

$Q_{max}$ is the recommended maximum mass flow rate for each sensor size.

FCS100: the precision sensor for low flow rates

| Nominal size | Zero stability | | $Q_{flat}$ | | $Q_{nom}$ | | $Q_{max}$ | |
|---|---|---|---|---|---|---|---|---|
| | kg/h | lb/h | kg/h | lb/min | kg/h | lb/min | kg/h | lb/min |

Volumetric liquid flow characteristics and gas flow capability

When measuring volume flow rate and gas flow rates, fluid properties will influence the selection of sensor type and size. Please contact your regional Siemens Measurement Intelligence team for further assistance. Based on your application details, they will be able to provide suitable sizing and selection advice.

Mass flow calibration and density adjustment for liquids

Siemens SITRANS FC Coriolis meters are calibrated in rigs accredited according to the international standard DIN EN ISO/IEC 17025:2018. Each flowmeter comes with a standard calibration certificate.

Mass flow calibration takes place at reference conditions. Specific values are listed in the standard calibration certificate.

| Mass flow calibration reference conditions | |
|---|---|
| Fluid | Water |
| Density | 900 ... 1 100 kg/m³ (56 ... 69 lb/ft³) |
| Fluid temperature | 10 ... 35 °C (50 ... 95 °F), average temperature: 22.5 °C (72.5 °F) |
| Ambient temperature | 10 ... 35 °C (50 ... 95 °F) |
| Process pressure | 1 ... 5 bar (15 ... 73 psi) |

Liquid density calibration is performed when density accuracy of 0.5 kg/m³ (0.03 lb/ft³) is selected in the model code.

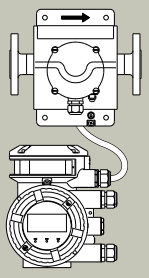
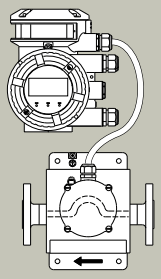
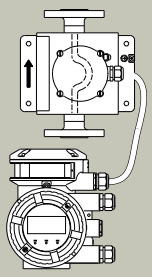
## Overview

SITRANS FCS100 sensor is the precision Coriolis flow sensor for low flow applications.

Features:







- Possibly the most compact dual curve Coriolis flow sensor
- Nominal sizes: DN 1 to DN 8
- Process connection: flange, thread, or hygienic clamp
- Install in tight spaces with no inlet and outlet restrictions
- Sizes to suit pilot plants, R & D labs, and high value fluid additives
- FCS100 sensors always combine with a remote transmitter via a connecting cable
- Installation of sensor and transmitter in different locations

FCS100 sensor

## Design

***Sensor installation position related to type of fluid***

| Installation position | Fluid | Description |
|---|---|---|
| **Position 1**  | Liquid | • Horizontal<br>• Measuring tubes below process pipe<br>• Avoids accumulation of entrained gas |
| **Position 2**  | Gas | • Horizontal<br>• Measuring tubes above process pipe<br>• Accumulation of liquid or condensate is less likely |
| **Position 3**  | Gas / Liquid | • Vertical<br>• Upwards direction of flow<br>• In liquid application accumulation of entrained gas is avoided<br>• This position allows self-draining in liquid flow |

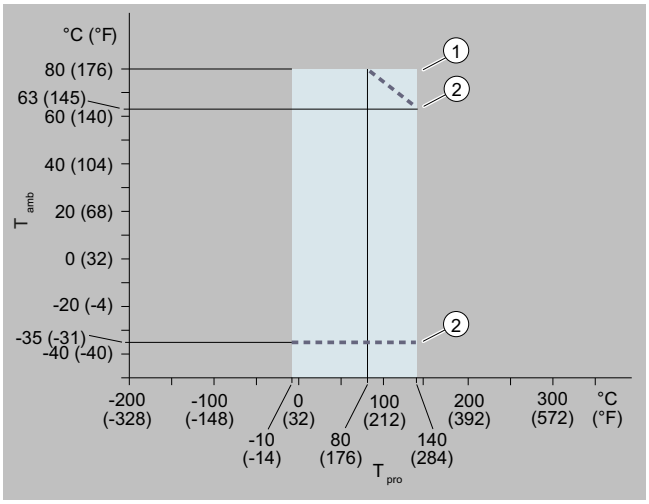
## Technical specifications

### *Allowed ambient temperature for FCS100 sensors*

The allowed combinations of process fluid and ambient temperature for the sensor are illustrated as light areas in the diagrams below.

Standard temperature specification, remote type

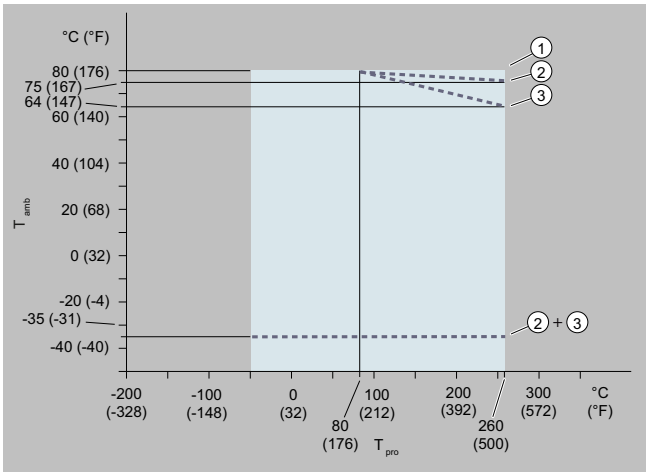
(except versions with hygienic clamp process connections)



Allowed process fluid and ambient temperatures, remote type (except hygienic clamp process connections)

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Limitation for fire retardant cable option |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

Standard temperature specification, remote type

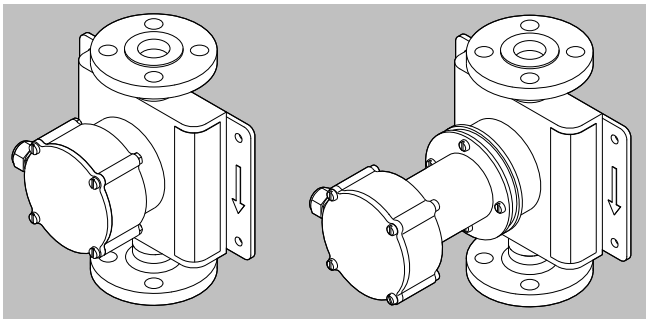


(versions with hygienic clamp process connection versions only)

Allowed process fluid and ambient temperatures, remote type (hygienic clamp process connections only)

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Limitation for fire retardant cable option |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

Medium temperature specification, remote type



Allowed process fluid and ambient temperatures

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Fire retardant cable without insulation options |
| 3 | Fire retardant cable with insulation options *JXX* |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

### *Mechanical specifications of FCS100 sensors*

The FCS100 sensor is available in standard neck and long neck designs. The neck can also be described as the pedestal connecting the sensor body to the terminal housing.

When configuring FCS100 sensors with medium range temperature specification (up to 260 °C (500 °F)), it is compulsory to select long neck options. Order code position 14 (Mounting style, Transmitter housing and material) includes the neck options.

FCS100 sensor with standard neck and long neck designs

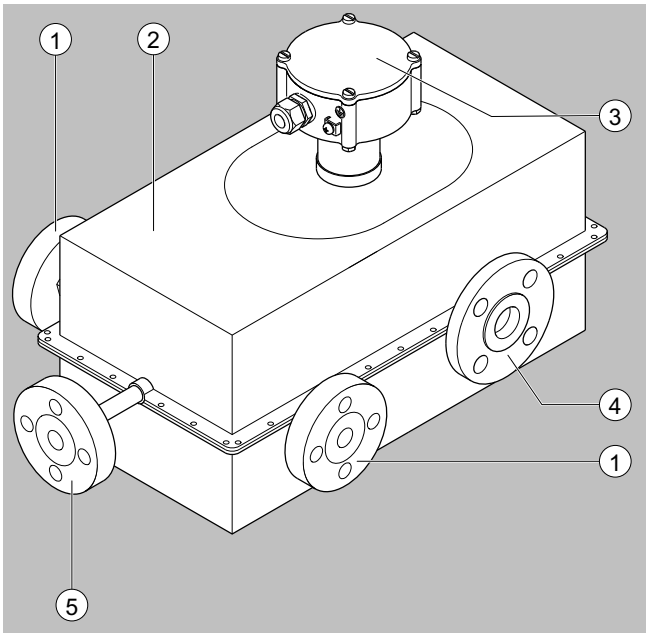
## Technical specifications (continued)

Materials

| Material specifications | | |
|---|---|---|
| **Wetted parts**[1] | | |
| Process connections | AISI 316L stainless steel, W Nr. 1.4404 | |
| Measuring tubes | alloy 22/2.4602 | |
| **Sensor housing** | | |
| Junction box | AISI 316L stainless steel | W Nr. 1.4404 |
| Neck | similar to ASTM CF-8 cast stainless steel | W Nr. 1.4308 |
| Body | AISI 304 stainless steel | W Nr. 1.4301 (order code option B01) |
| | AISI 316L stainless steel | W Nr. 1.4404 (order code option B02) |
| **Nameplates**[2] | **Process temperature range** | **Material** |
| Sensor with AISI 304 stainless steel housing | Standard, up to 150 °C (302 °F) | Polyester film |
| Sensor with AISI 304 stainless steel housing | Medium, up to 260 °C (500 °F) | AISI 316L ss |
| Sensor with AISI 316L stainless steel housing | All | AISI 316L ss |

1) The user is responsible to ensure chemical compatibility of the material of the wetted parts with the measured process fluid.
2) Nameplate material depends on the materials selected for SITRANS FC sensors.



### *Secondary containment*

Some applications or environment conditions require secondary containment retaining the process pressure for increased safety. SITRANS FCS100 sensors have a secondary containment filled with inert gas.

| | |
|---|---|
| Typical burst pressure at room temperature for sizes | 65 bar (942 psi) |

### *Insulation and heat tracing*

In cases where fluid temperature deviates more than 80 °C from ambient temperature, sensor insulation is recommended to avoid negative effects from temperature fluctuations.

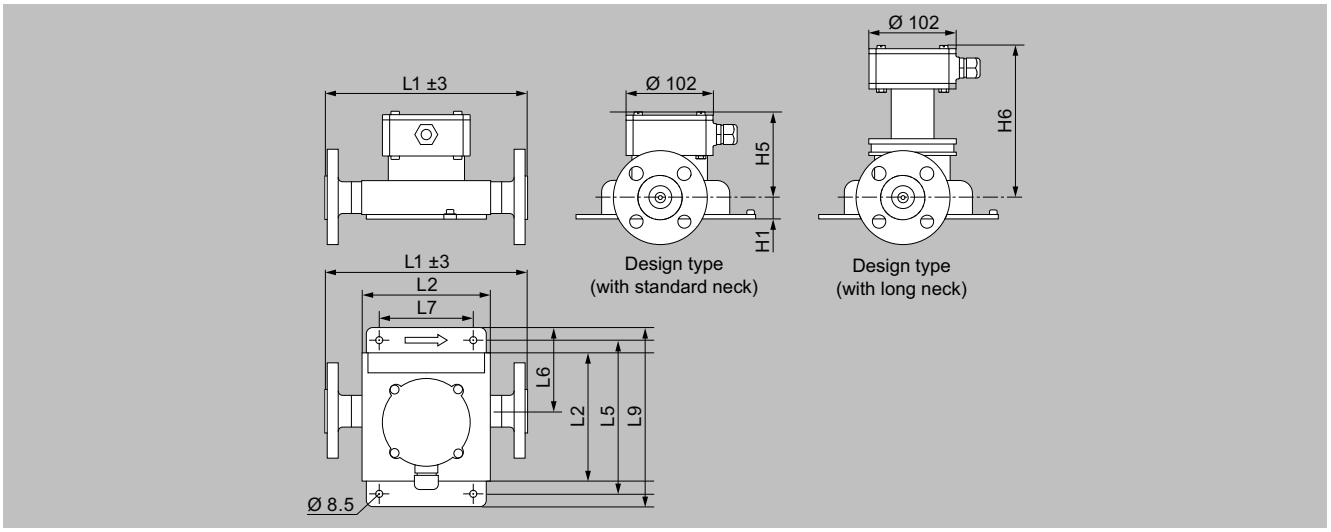
Configuration of FCS100 sensor with insulation and heat tracing

| | |
|---|---|
| 1 | Heating tracing connection |
| 2 | Insulation |
| 3 | Sensor terminal box |
| 4 | Process connection |
| 5 | Purging connection |

### *Maximum temperature of heat carrier*

| Order code position 12 | Process temperature range | Temperature range of heat carrier |
|---|---|---|
| 1 | Standard, up to 150 °C (302 °F) | 0 ... 150 °C (32 ... 302 °F) |
| 2 | Medium, up to 260 °C (500 °F) | 0 ... 200 °C (32 ... 392 °F) |

Insulation and heat tracing may be installed by the user but not in hazardous areas and the following must be noted:



- Do not insulate sensor terminal box.
- Do not expose transmitters to ambient temperatures exceeding 60 °C (140 °F)
- The preferred insulation is 60 mm (2.36 inch) thick with a heat transfer coefficient of 0.4 W/m² K (0.07 Btu/ ft² °F)

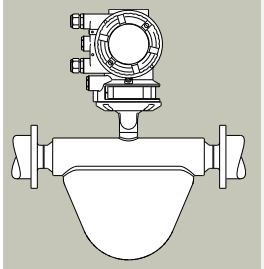
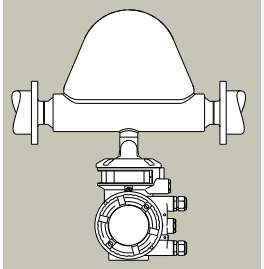
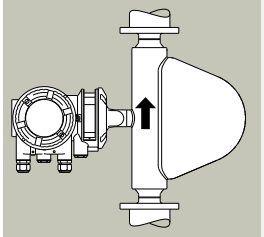
## Overview

SITRANS FCS500 sensor is the universal Coriolis flow sensor for routine and hygienic applications.

Features:







- Dual curved AISI 316L stainless steel tubes with polished option
- Nominal sizes: DN 10 to DN 80
- Process connection: flange, thread, or a selection of hygienic fittings
- Hygienic approvals for food, beverage, and pharmaceutical sectors
- Versatile solution with superior turndown and low pressure loss
- Combination with compact or remote transmitters

FCS500 sensor

## Design

***Sensor installation position related to type of fluid***

| Installation position | Fluid | Description |
|---|---|---|
| **Position 1**  | Liquid | • Horizontal<br>• Measuring tubes below process pipe<br>• Avoids accumulation of entrained gas |
| **Position 2**  | Gas | • Horizontal<br>• Measuring tubes above process pipe<br>• Accumulation of liquid or condensate is less likely |
| **Position 3**  | Gas / Liquid | • Vertical<br>• Upwards direction of flow<br>• In liquid application accumulation of entrained gas is avoided<br>• This position allows self-draining in liquid flow |

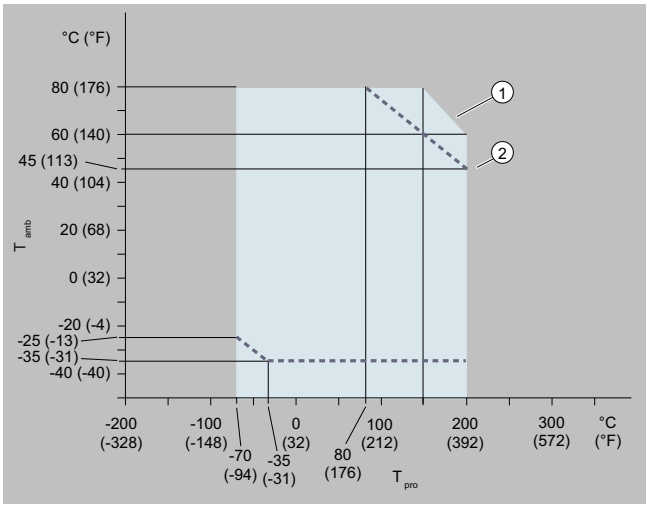
## Technical specifications

***Allowed ambient temperature for FCS500 sensors***

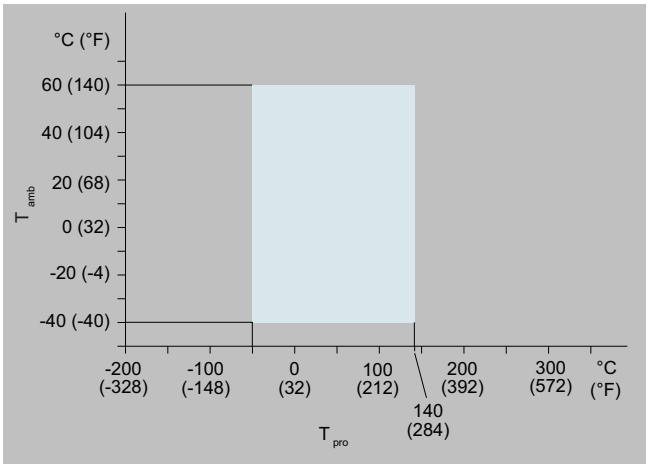
The allowed combinations of process fluid and ambient temperature for the sensor are illustrated as light areas in the diagrams below.



Standard temperature specification, non-hygienic version, compact transmitter

Allowed process fluid and ambient temperatures, compact type

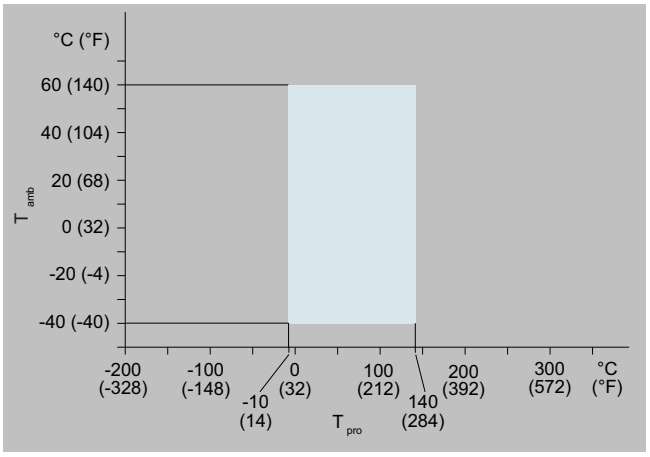
| | |
|---|---|
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |



Standard temperature specification, non-hygienic version, remote transmitter

Allowed process fluid and ambient temperatures, non-hygienic, remote transmitter style

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Limitation for fire retardant cable option |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |



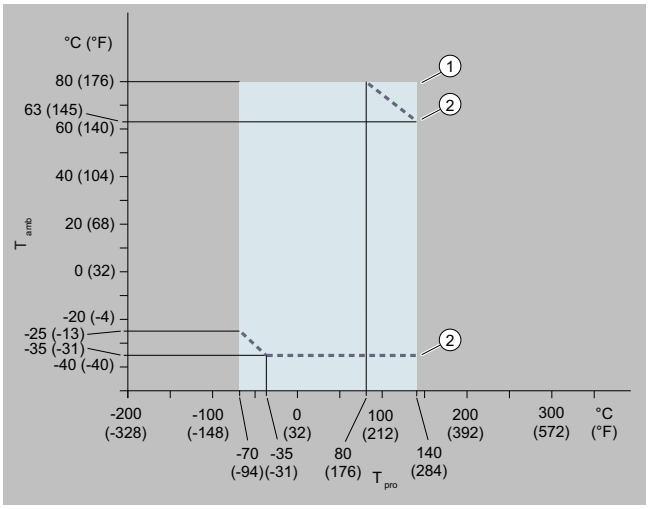
Standard temperature specification, hygienic version with threaded connections, compact transmitter

Allowed process fluid and ambient temperatures, threaded hygienic connections, compact transmitter

| | |
|---|---|
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

Standard temperature specification, hygienic version with clamp connections, compact transmitter

Allowed process fluid and ambient temperatures, clamp hygienic connections, compact transmitter



| | |
|---|---|
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

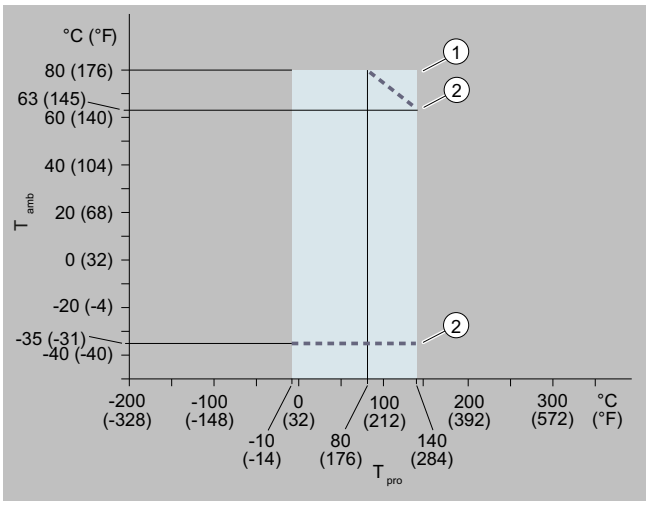
## Technical specifications (continued)

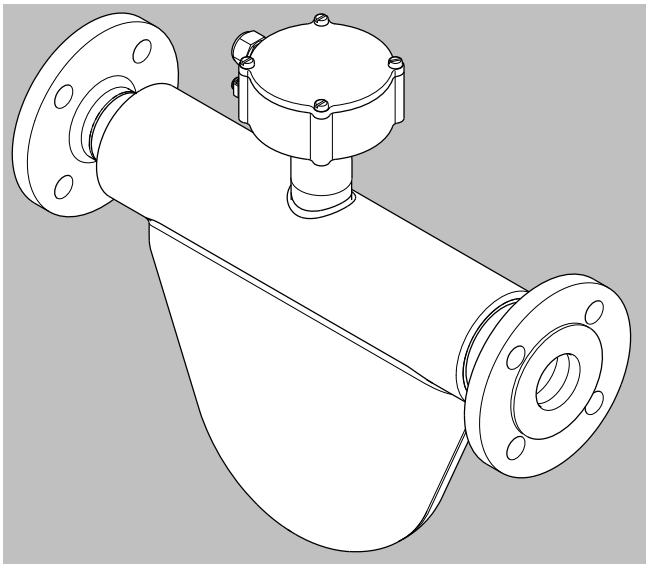


Standard temperature specification, hygienic version with threaded connections, remote transmitter

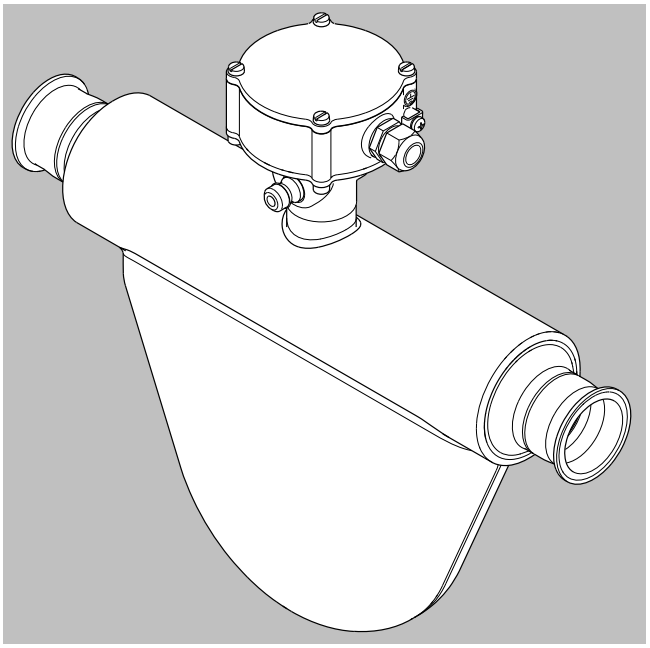
Allowed process fluid and ambient temperatures, threaded hygienic connections, remote transmitter

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Limitation for fire retardant cable option |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

Standard temperature specification, hygienic version with clamp connections, remote transmitter



Allowed process fluid and ambient temperatures, hygienic clamp connections, remote transmitter



| | |
|---|---|
| 1 | Standard cable option |
| 2 | Limitation for fire retardant cable option |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

***Mechanical specifications of FCS500 sensors***

FCS500 sensors are available only with the standard neck design and can be combined with compact or remote transmitters. The neck can also be described as the pedestal connecting the sensor body to the transmitter or terminal housing.

FCS500 sensor (for remote transmitter) with standard neck, non hygienic version

FCS500 sensor (for remote transmitter) with standard neck, hygienic version

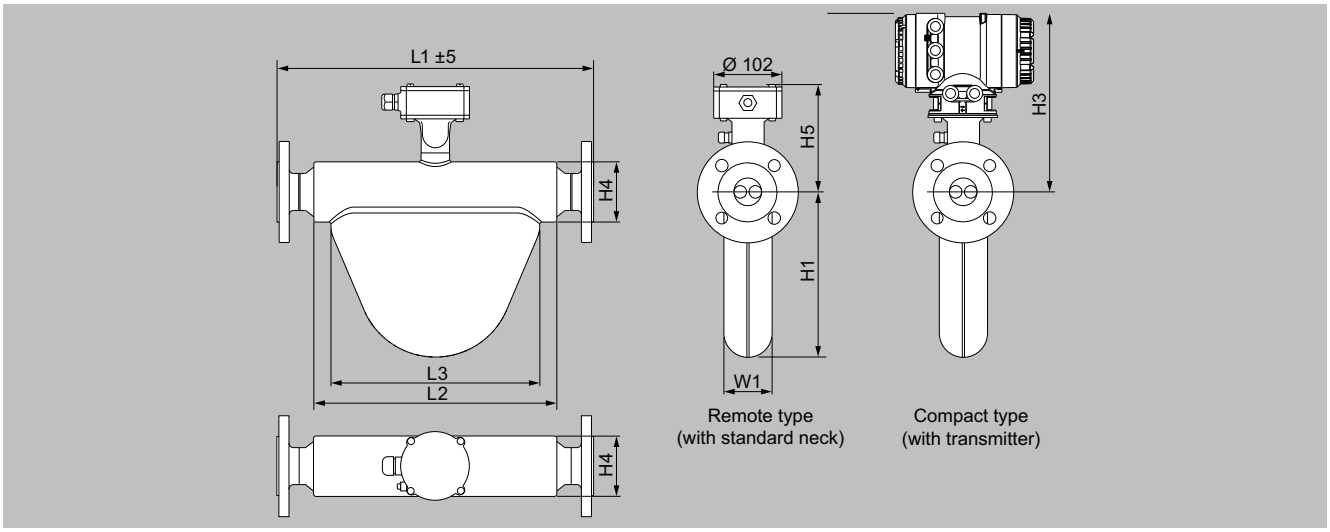
## Technical specifications (continued)

| Material specifications | | |
|---|---|---|
| **Wetted parts**[3] | | |
| Measuring tubes (for sensors with hygienic process connections) | Surface roughness Ra ≤ 0.8 µm[1] | |
| Process connections | AISI 316L stainless steel, W Nr. 1.4404 | |
| **Sensor housing** | | |
| Junction box | AISI 316L stainless steel | W Nr. 1.4404 |
| Neck | similar to ASTM CF-8 cast stainless steel | W Nr. 1.4308 |
| Body | AISI 304 stainless steel | W Nr. 1.4301 |
| **Nameplates**[2] | **Process temperature range** | **Material** |
| Sensor with AISI 304 stainless steel housing | Standard, up to 150 °C (302 °F) | Polyester film |

1) Other parts including the flow divider and process connections exhibit the same roughness.
2) Nameplate material depends on the materials selected for SITRANS FC sensors.
3) The user is responsible to ensure chemical compatibility of the material of the wetted parts with the measured process fluid.

### *Secondary containment*

Some applications or environment conditions require secondary containment retaining the process pressure for increased safety. SITRANS FCS500 sensors have a secondary containment filled with inert gas.



| | |
|---|---|
| Typical burst pressure at room temperature for sizes DN 10, DN 15, DN 25, and DN 50 | 49 bar (710 psi) |
| Typical burst pressure at room temperature for size DN 80 | 30 bar (435 psi) |

***Overall length L1 and weight***

The overall length of the sensor depends on the selected process connection (type and size). The following tables list the overall length and weight as functions of the individual process connection.

The weights in the tables are for the remote type. Additional weight for the compact type: up to 3.2 kg (7.1 lb)

***L1 dimension and weight with process connections according to ASME B16.5 (AISI 316/AISI 316L)***

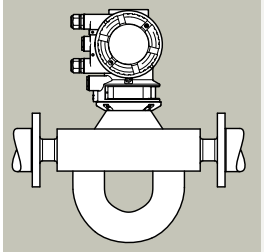
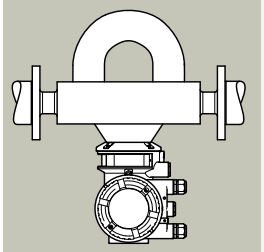
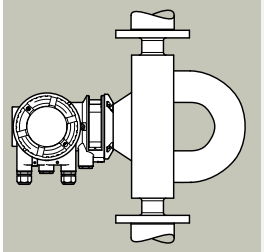
## Overview

SITRANS FCS600 sensor is the resistant Coriolis flow sensor for extreme conditions and corrosive fluids.
Features:







- Dual curved AISI 316L or alloy 22 tubes with optimum decoupling from external influences
- Nominal sizes from DN 2 to DN 65
- Process connection: flange, thread, or high pressure autoclave
- Temperatures from -196 °C (for cryogenic fluids), up to +350 °C
- Insulation and heat tracing options for viscous and molten liquids
- Combination with compact or remote transmitters.

FCS600 sensor

## Design

***Sensor installation position related to type of fluid***

| Installation position | Fluid | Description |
|---|---|---|
| **Position 1**  | Liquid | • Horizontal<br>• Measuring tubes below process pipe<br>• Avoids accumulation of entrained gas |
| **Position 2**  | Gas | • Horizontal<br>• Measuring tubes above process pipe<br>• Accumulation of liquid or condensate is less likely |
| **Position 3**  | Gas / Liquid | • Vertical<br>• Upwards direction of flow<br>• In liquid application accumulation of entrained gas is avoided<br>• This position allows self-draining in liquid flow |

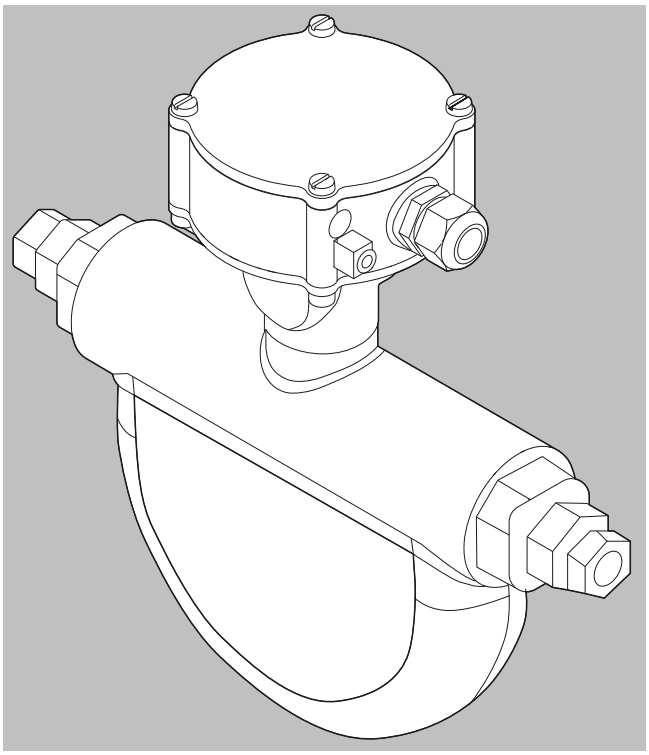
### *Mechanical specifications of FCS600 sensors*

FCS600 sensors are available with standard neck or long neck design and can be combined with compact or remote transmitters. The neck can also be described as the pedestal connecting the sensor body to the transmitter or terminal housing.



FCS600 sensors (for remote transmitter) in sizes DN 15, DN 25, DN 40 and DN 65, standard neck and long neck

© Siemens AG 2024

## Technical specifications (continued)

FCS600 sensors (for remote transmitter) in sizes DN 2 and DN 4 standard neck

| Material specifications | | |
|---|---|---|
| **Wetted parts**[1] | | |
| Sensor size DN 2 | Alloy 22 dual measuring tubes with AISI 316L stainless steel process connections | |
| Sensor size DN 4 | Alloy 22 dual measuring tubes with AISI 316L stainless steel process connections | |
| Sensor size DN 15 | AISI 316L stainless steel or alloy 22 | |
| Sensor size DN 25 | AISI 316L stainless steel or alloy 22 | |
| Sensor size DN 40 | AISI 316L stainless steel or alloy 22 | |
| Sensor size DN 65 | AISI 316L stainless steel | |
| **Sensor housing** | | |
| Junction box | AISI 316L stainless steel | All sensors with remote transmitters |
| Neck (pedestal) | ASTM A351 CF3M stainless steel | DN 2 and DN 4 sensors only (short neck) |
| Neck (pedestal) | AISI 316L stainless steel | All sensors, except sizes DN 2 and DN 4 |
| Body (outer casing) | AISI 304 stainless steel | All versions, except sizes DN 2 and DN 4 |
| Body (outer casing) | AISI 316L stainless steel | All versions |
| **Nameplates**[2] | **Process temperature range** | **Material** |
| Sensor with AISI 304 stainless steel housing | Standard, up to 150 °C (302 °F) | Polyester film |
| Sensor with AISI 304 stainless steel housing | Low, medium or high | AISI 316L ss |
| Sensor with AISI 316L stainless steel housing | All versions | AISI 316L ss |

1) The user is responsible to ensure chemical compatibility of the material of the wetted parts with the measured process fluid.
2) Nameplate material depends on the materials selected for SITRANS FC sensors.

### *Secondary containment*

Some applications or environment conditions require secondary containment retaining the process pressure for increased safety.
SITRANS FCS600 sensors have a secondary containment filled with inert gas.

© Siemens AG 2024

## Technical specifications (continued)

| | |
|---|---|
| Typical burst pressure at room temperature for sizes DN 2 and DN 4 | 49 bar (710 psi) |
| Typical burst pressure at room temperature for sizes DN 15, DN 25 and DN 40: 120 bar (1 740 psi) | 120 bar (1 740 psi) |
| Typical burst pressure at room temperature for size DN 65 | 80 bar (1 160 psi) |

***Insulation and heat tracing (not available for sizes DN 2 and DN 4)***

In cases where fluid temperature deviates more than 80 °C (176 °F) from ambient temperature, sensor insulation is recommended to avoid negative effects from temperature fluctuations.

***Maximum temperature of heat carrier***

| Process temperature range | Temperature range of heat carrier |
|---|---|
| Standard, up to 150 °C (302 °F) | 0 ... 150 °C (32 ... 302 °F) |
| Medium, up to 260 °C (500 °F) | 0 ... 230 °C (32 ... 446 °F)[1)] |
| High, up to 350 °C (662 °F) | 0 ... 350 °C (32 ... 662 °F) |

1) With Ex Approval 0 ... 220 °C (32 ... 428 °F)

Insulation and heat tracing may be installed by the user but not in hazardous areas and the following must be noted:

- Do not insulate sensor terminal box.
- Do not expose transmitters to ambient temperatures exceeding 60 °C (140 °F).
- The preferred insulation is 60 mm (2.36") thick with a heat transfer coefficient of 0.4 W/m² K (0.07 Btu/ft² °F).

### *Overall length L1 and weight*

The overall length of the sensor depends on the selected process connection (type and size). The following tables list the overall length and weight as functions of the individual process connection.

The weights in the tables are for the remote type. Additional weight for the compact type: up to 3.2 kg (7.1 lb).

### *L1 dimension and weight with process connections according to ASME B16.5, AISI 316L wetted parts*

***Overall length L1 and weight***

The overall length of the sensor depends on the selected process connection (type and size). The following tables list the overall length and weight as functions of the individual process connection.

The weights in the tables are for the remote type. Additional weight for the compact type: up to 3.2 kg (7.1 lb).

***L1 dimension and weight for medium pressure autoclave process connections***

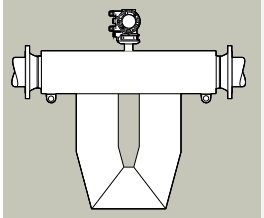
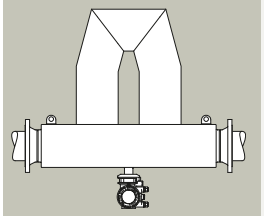
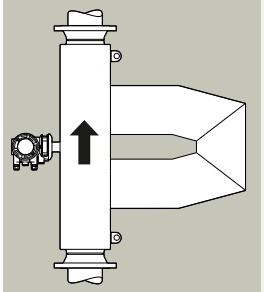
## Overview

SITRANS FCS700 sensor is the grande Coriolis flow sensor for large pipes and high flows.

Features:







- Dual curved AISI 316L stainless steel or alloy 22 tubes with optimum decoupling from external influences
- Nominal sizes: DN 100 to DN 200
- Process connection: flanges
- Energy efficient low pressure loss design with short tube paths and large tube diameter
- High power tube driver for dependable measurements in high damping applications
- Combination with compact or remote transmitters

FCS700 sensor

## Design

***Sensor installation position related to type of fluid***

| Installation position | Fluid | Description |
|---|---|---|
| **Position 1**  | Liquid | • Horizontal<br>• Measuring tubes below process pipe<br>• Avoids accumulation of entrained gas |
| **Position 2**  | Gas | • Horizontal<br>• Measuring tubes above process pipe<br>• Accumulation of liquid or condensate is less likely |
| **Position 3**  | Gas / liquid | • Vertical<br>• Upwards direction of flow<br>• In liquid application accumulation of entrained gas is avoided<br>• This position allows self-draining in liquid flow |

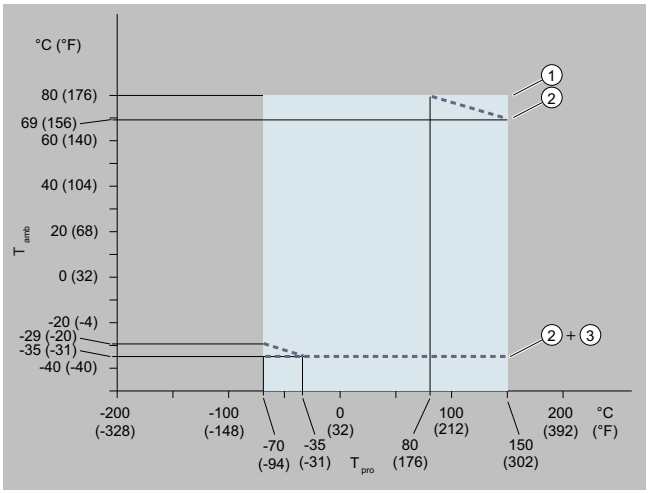
## Technical specifications

### *Allowed ambient temperature for FCS700 sensors*

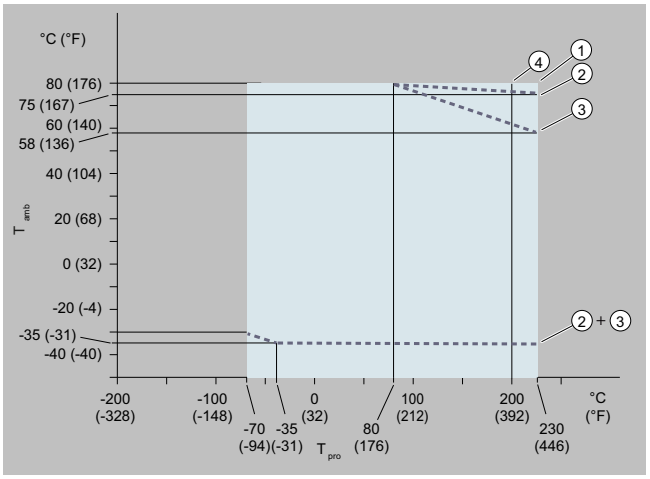
The allowed combinations of process fluid and ambient temperature for the sensor are illustrated as light areas in the diagrams below.



Standard temperature specification, compact transmitter

Allowed process fluid and ambient temperatures, compact transmitter

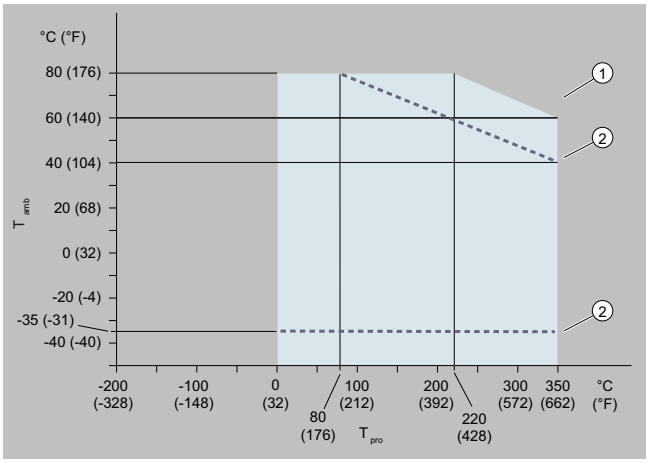
| | |
|---|---|
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |



Standard temperature specification, remote transmitter

Allowed process fluid and ambient temperatures, remote transmitter

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Fire retardant cable standard neck or long neck with insulation and heating options |
| 3 | Fire retardant cable long neck without insulation and heating options |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |



Medium temperature specification, remote transmitter

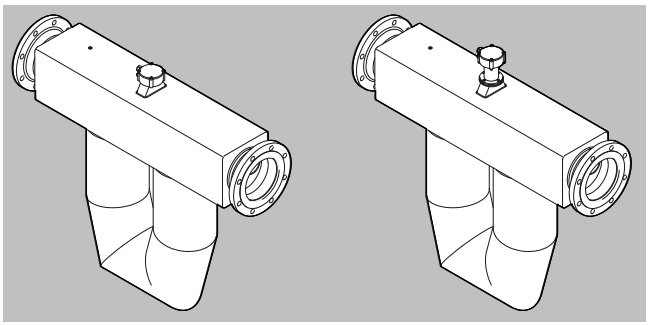
Allowed process fluid and ambient temperatures, compact transmitter

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Fire retardant cable without insulation and heating options |
| 3 | Fire retardant cable with insulation and heating options |
| 4 | For FCS700 DN 200 medium temperature range is limited to 200 °C (392 °F) |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |

High temperature specification, remote transmitter

Allowed process fluid and ambient temperatures, remote transmitter

| | |
|---|---|
| 1 | Standard cable option |
| 2 | Fire retardant cable option |
| $T_{amb}$ | Ambient temperature |
| $T_{pro}$ | Process fluid temperature |



### *Mechanical specifications of FCS700 sensors*

FCS700 sensors are available in standard neck and long neck designs and can be combined with compact or remote transmitters. The neck can also be described as the pedestal connecting the sensor body to the transmitter or terminal housing.

## Technical specifications (continued)

FCS700 sensors DN 100 and DN 150 (for remote transmitter) with standard neck, and long neck version shown to the right

FCS700 sensors DN 200 (for remote transmitter) with standard neck, and long neck version shown to the right

| Material specifications | | |
|---|---|---|
| **Wetted parts**[1] | | |
| Sensor size DN 100 | AISI 316L stainless steel or alloy 22 | |
| Sensor size DN 150 | AISI 316L stainless steel or alloy 22 | |
| Sensor size DN 200 | AISI 316L stainless steel with ASTM A351 CF3M stainless steel flow separator | |
| **Sensor housing** | | |
| Junction box | AISI 316L stainless steel | All sensors with remote transmitters |
| Neck (pedestal) | AISI 316L stainless steel | All versions |
| Body (outer casing) | AISI 304 stainless steel | Versions with housing code B01 |
| Body (outer casing) | AISI 316L stainless steel | Versions with housing codes B02, B03 and B04 |
| **Nameplates**[2] | **Process temperature range** | **Material** |
| Sensor with AISI 304 stainless steel housing | Standard, up to 150 °C (302 °F) | Polyester film |
| Sensor with AISI 304 stainless steel housing | Medium or high | AISI 316L ss |
| Sensor with AISI 316L stainless steel housing | All versions | AISI 316L ss |

1) The user is responsible to ensure chemical compatibility of the material of the wetted parts with the measured process fluid.
2) Nameplate material depends on the materials selected for SITRANS FC sensors.

### *Secondary containment*

Some applications or environment conditions require secondary containment retaining the process pressure for increased safety.
SITRANS FCS700 sensors have a secondary containment filled with inert gas.

| | |
|---|---|
| Typical burst pressure at room temperature for size DN 100 | 65 bar (942 psi) |
| Typical burst pressure at room temperature for size DN 150 | 50 bar (725 psi) |
| Typical burst pressure at room temperature for size DN 200 | 30 bar (435 psi) |

### *Insulation and heat tracing (not available for sizes DN 150 and DN 200)*

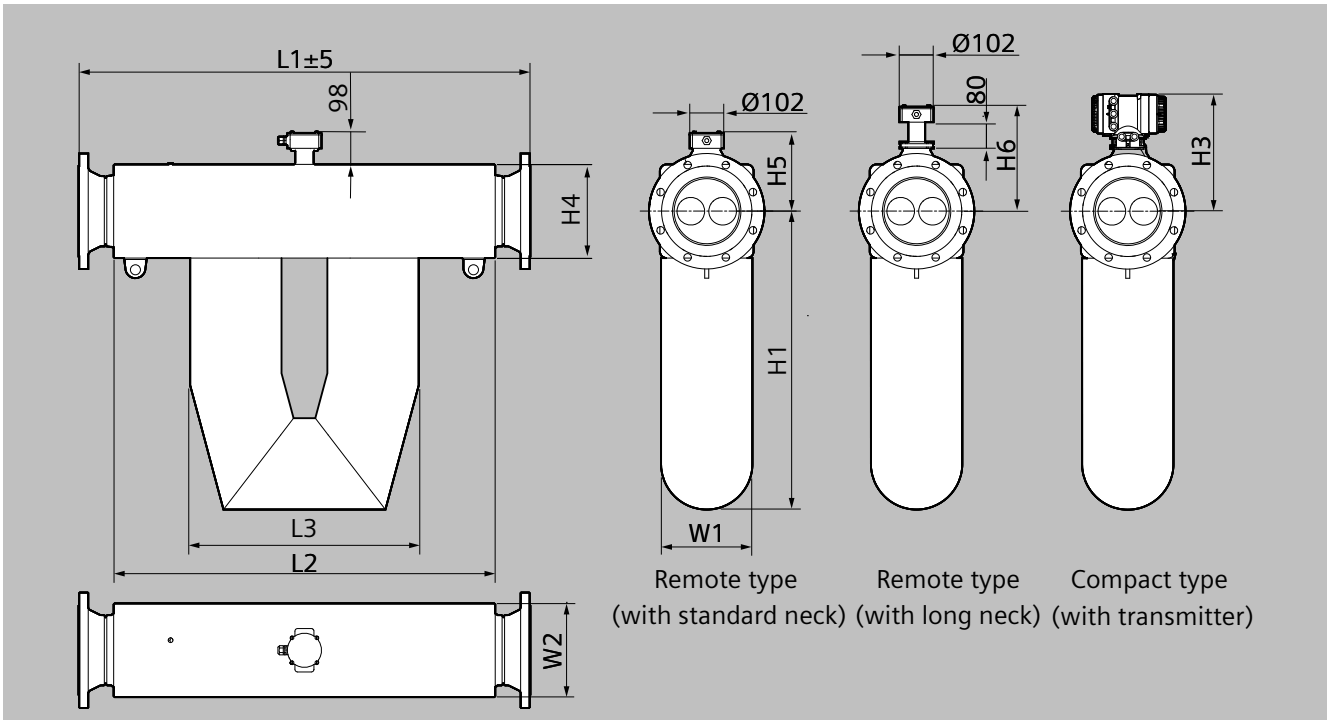
In cases where fluid temperature deviates more than 80 °C (176 °F) from ambient temperature, sensor insulation is recommended to avoid negative effects from temperature fluctuations.

### *Maximum temperature of heat carrier*

| Process temperature range | Temperature range of heat carrier |
|---|---|
| Standard, up to 150 °C (302 °F) | 0 ... 150 °C (32 ... 302 °F) |
| Medium, up to 260 °C (500 °F) | 0 ... 230 °C (32 ... 446 °F)[1] |
| High, up to 350 °C (662 °F) | 0 ... 350 °C (32 ... 662 °F) |

1) With Ex Approval 0 ... 220 °C (32 ... 428 °F)

Insulation and heat tracing may be installed by the user but not in hazardous areas, and the following must be noted:



- Do not insulate sensor terminal box.
- Do not expose transmitters to ambient temperatures exceeding 60 °C (140 °F).
- The preferred insulation is 60 mm (2.36") thick with a heat transfer coefficient of 0.4 W/m² K (0.07 Btu/ ft² °F).

***Overall length L1 and weight***

The overall length of the sensor depends on the selected process connection (type and size). The following tables list the overall length and weight as functions of the individual process connection.

The weights in the tables are for the remote type. Additional weight for the compact type: up to 3.2 kg (7.1 b).

***L1 dimension and weight with process connections according to ASME B16.5, AISI 316L wetted parts***

## Overview

FCT020 is the standard transmitter, suitable for general purpose applications. It delivers accurate and precise measurements of mass flow rate, density, temperature and volume flow rate.

The FCT020 transmitter is available in compact or remote design and can be combined with all SITRANS FC sensors. The selection is made within the complete SITRANS FC ordering code.

Spare transmitters are selected using the SITRANS FC ordering code, but with no sensor selected.

Example of SITRANS FCT transmitter mounted on SITRANS FCS600

FCT transmitter and SITRANS FCS100

Following features are available in the FCT020 transmitter:

- Tube health check

Tube health check

(software functions option code: S12)

Tube health check monitors key diagnostics, including tube stiffness, driver and pickups. Self-verification alerts to potential performance issues due to unplanned process events, for example gas or vapor breakout, or solid deposits building up in the tubes. The user defines verification frequency and alarm behavior. Verification results indicate whether preventive maintenance action is required.

## Overview (continued)

| Specification overview of SITRANS FCT020 | |
|---|---|
| **Typical measurement performance** | • Mass flow accuracy: ± 0.2% (of rate)<br>• Density accuracy: ± 4 kg/m³ (0.25 lb/ft³) |
| **Features and functions** | • Easy setup wizard<br>• microSD card<br>• Tube health check<br>• Self-verification |

## Configuration

***Overview of available inputs, outputs and digital communications***

The table below provides a matrix of all available combinations for FCT020 transmitters.

Each combination is defined by a blend of two order code options:

- Ch 1 codes in the form "**E..**" define the required type of digital communication.
- Ch 2-4 codes in the form "**F..**" define the required combination of conventional inputs and outputs.

Abbreviations used in the table:

- Pulse or status output is abbreviated to "P/S output".
- Status only output is abbreviated to "S output".
- Status input is abbreviated to "S input".

| Ch 1 code | Ch 2-4 code | I/O 1 (Channel 1) | I/O 2 (Channel 2) | I/O 3 (Channel 3) | I/O 4 (Channel 4) |
|---|---|---|---|---|---|
| **E00** | **F00** | none | none | none | none |
| **E07** [1] | **F01** | passive mA HART output | passive P/S output | passive mA output | none |
| **E07** [1] | **F02** | passive mA HART output | passive P/S output | passive mA output | passive P/S output |
| **E07** [1] | **F03** | passive mA HART output | passive P/S output NAMUR | passive mA output | none |
| **E07** [1] | **F04** | passive mA HART output | passive P/S output NAMUR | passive mA output | passive P/S output NAMUR |
| **E06** | **F11** | active mA HART output | passive P/S output | none | none |
| **E06** | **F12** | active mA HART output | passive P/S output | passive S output | passive P/S output |
| **E06** | **F13** | active mA HART output | passive P/S output | volt free S input | passive P/S output |
| **E06** | **F20** | active mA HART output | passive P/S output | volt free S input | active P/S output |
| **E06** | **F21** | active mA HART output | passive P/S output | volt free S input | active P/S output and pull-up |
| **E06** | **F22** | active mA HART output | passive P/S output | passive P/S output | active mA output |
| **E06** | **F23** | active mA HART output | passive P/S output | volt free S input | active mA output |
| **E14** | **F31** | none | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F32** | passive P/S output | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F35** | active P/S output | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F36** | active P/S output and pull-up | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F37** | active mA output | passive P/S output | MODBUS C | MODBUS A & B |

[1] Any combinations with passive mA HART output on Channel are only possible with Ex approval. All outputs in these combinations are intrinsically safe.

## Technical specifications

### *Mechanical specifications*

| Material specifications | | | |
|---|---|---|---|
| **Housing material options** | **Coating** | **Design** | **Order code position 14** |
| Cast aluminum alloy Al-Si10Mg(Fe) | Standard coating[1)] | Remote transmitter | C or D |
| Cast aluminum alloy Al-Si10Mg(Fe) | Corrosion resistant coating[2)] | Remote transmitter | E or F |
| ASTM CF8M stainless steel | None | Remote transmitter | G or H |
| **Display** | | | |
| Material of the lid window | Glass | | |
| **Mounting bracket[3)]** | | | |
| Material | AISI 316L stainless steel | W Nr. 1.4404 | |
| **Nameplates[4)]** | **Process temperature range** | **Nameplate material** | |
| Transmitter with cast aluminum housing | Not applicable | Foil | |
| Transmitter with ASTM CF8M stainless steel housing | Not applicable | AISI 316L ss | |

1) Standard coating is urethane cured polyester powder coating.
2) Corrosion protection coating is a three-layer coating with high chemical resistance (polyurethane coating on two layers of epoxy).
3) Only the remote transmitters are supplied with a mounting bracket.
4) Nameplate material depends on the materials selected for SITRANS FC sensors.

### *Electrical specifications*

| Power supply | |
|---|---|
| Alternating current voltage (rms) | nominal 24 V AC (-15% ... +10%), or 100 ... 240 V AC (-20% ... +10%) |
| Frequency | 47 ... 63 Hz |
| Direct current voltage | nominal 24 V DC (-15% ... +20%) or 100 ... 120 V DC (-10% ... +8.3%) |
| **Power consumption** | P ≤ 10 W (including sensor) |

Notes:

- For DNV approval option supply voltage is limited to 24 V.
- NAMUR NE21 testing specifies the range 24 V DC ±20% under NE21 test conditions.

Power supply failure

In the event of a power failure, the flowmeter data are backed up on a non-volatile internal memory. In case of devices with display, the characteristic sensor values, such as nominal diameter, serial number, calibration constants, zero point and the error history are also stored on a microSD card.

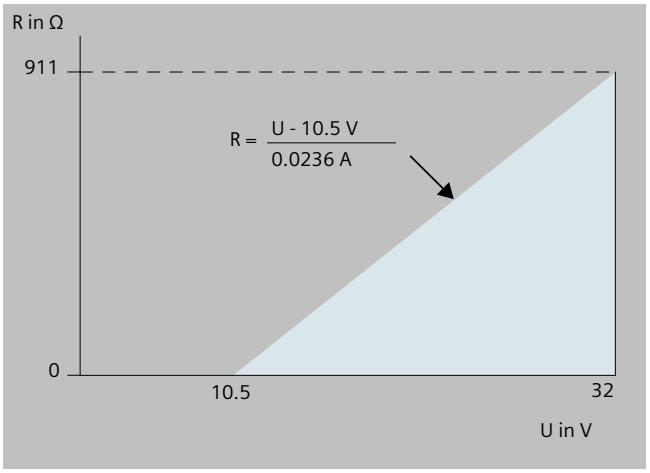
Galvanic isolation

All circuits for inputs, outputs and power supply are galvanically isolated from each other.

### *Analog inputs and outputs*

Analog input

FCT020 transmitters cannot be specified with analog current input.



Analog output

Up to 2 analog outputs can be selected at time of ordering. The analog outputs can be configured to represent the following measured values:

- Flow rate (mass, volume, net partial component flow of a mixture)
- Density
- Temperature
- Pressure
- Concentration

HART communication, when selected, is supplied on channel 1 (I/O 1). The current output may be operated in compliance with the NAMUR NE43 standard.

| Analog outputs | |
|---|---|
| **Active output** | |
| Nominal output current range | 4 ... 20 mA |
| Maximum output current range | 2.4 ... 21.6 mA |
| Load resistance | ≤ 750 Ω |
| Load resistance for secure HART communication | 230 ... 600 Ω |
| **Passive output** | |
| Nominal output current range | 4 ... 20 mA |
| Maximum output current range | 2.4 ... 21.6 mA |
| External power supply | 10.5 ... 32 VDC |
| Load resistance for secure HART communication | 230 ... 600 Ω |
| Load resistance at current output | ≤ 911 Ω |

Maximum load resistance as a function of an external power supply voltage

© Siemens AG 2024

## Technical specifications (continued)

### *Digital inputs and outputs*

Digital inputs (status)

Do not connect a signal source with electric voltage.

The status input is provided for use of voltage-free contacts with the following specification:

| | |
|---|---|
| **Resistance when closed** | < 200 Ω |
| **Resistance when open** | > 100 kΩ |

Digital outputs

| **Digital outputs** | |
|---|---|
| **Active pulse output available on Pulse/Status output, connection of an electronic counter[1)]** | |
| Load resistance | > 1 kΩ |
| Internal power supply | 24 V DC ±20% |
| Maximum pulse rate | 10 000 pulses/s |
| Frequency range | 0 ... 12.5 kHz |
| **Active pulse output available on Pulse/Status output, connection of an electromechanical counter** | |
| Maximum current | 150 mA |
| Average current | ≤ 30 mA |
| Internal power supply | 24 V DC ±20% |
| Maximum pulse rate | 2 pulses/s |
| Pulse width | 20, 33, 50, or 100 ms |
| **Active pulse output available on Pulse/Status output, with internal pull-up resistor** | |
| Internal power supply | 24 V DC ±20% |
| Internal pull-up resistor | 2.2 kΩ |
| Maximum pulse rate | 10 000 pulses/s |
| Frequency range | 0 ... 12.5 kHz |
| **Passive pulse output available on Pulse/Status output[1)]** | |
| Maximum load current | ≤ 200 mA |
| External power supply | ≤ 30 V DC |
| Maximum pulse rate | 10 000 pulses/s |
| Frequency range | 0 to 12.5 kHz |
| **Active status output available on Pulse/Status output[2)]** | |
| Load resistance | > 1 kΩ |
| Internal power supply | 24 V DC ±20% |
| **Active status output available on Pulse/Status output, with internal pull-up resistor[3)]** | |
| Internal pull-up resistor | 2.2 kΩ |
| Internal power supply | 24 V DC ±20% |
| **Passive status output available on Pulse/Status output, or Status output** | |
| Output current | ≤ 200 mA |
| External power supply | ≤ 30 V DC |
| **Passive pulse or status output available on Pulse/Status output (NAMUR)** | Output signals according to EN 60947-5-6 (previously NAMUR, worksheet NA001) |

1) Maximum voltage and correct polarity must be observed for wiring.
2) Since this is a transistor contact, maximum allowed current as well as polarity and level of output voltage must be observed during wiring.
3) A relay must be connected in series to switch alternating voltage.

### *Digital communications*

Each transmitter is configured with one default digital communication interface, selectable in the SITRANS FC order code.

HART

- When selected, HART communication is supplied on the output terminal pair I/O 1.
- Up to 3 further input/output options can be configured for output terminal pairs I/O 2, I/O 3, and I/O 4.
- HART is available with either non-intrinsically safe or intrinsically safe outputs.

PROFIBUS PA

- When selected, PROFIBUS PA communication is supplied on the output terminal pair I/O 1.
- PROFIBUS PA interface is available with and without intrinsic safety.
- PROFIBUS PA digital communication signal is in accordance with IEC 61158/61784.
- Maximum voltage and correct polarity must be observed for wiring.
- Power supply: 9 ... 32 V DC
- Current draw: 15 mA (maximum)
- Compliance with PA profile revision 3.02 supporting: Condensed Status (NE107)
- Device identification number (IDENT_NUMBER) adaption

***Summary of available function blocks – PROFIBUS PA***

| Function block | Code | Description |
|---|---|---|
| **Transducer block** | FTB | Flow |
| | CTB | Concentration |
| | LTB | LCD Indicator |
| | MTB | Maintenance |
| | SDBT | Advanced diagnostics |
| **Analog input block [1)]** | AI1 | Mass flow |
| | AI2 | Density |
| | AI3 | Temperature |
| | AI4 | Volume flow |
| | AI5 | Reference density |
| | AI6 | Corrected (normal/standard) volume flow |
| **Totalizer block [1)]** | TOT1 | Mass |
| | TOT2 | Volume |
| | TOT3 | Corrected (normal/standard) volume |
| **Analog output block [1)]** | AO | Pressure |

1) Factory default setting. Assignment can be changed by parameter "channel".

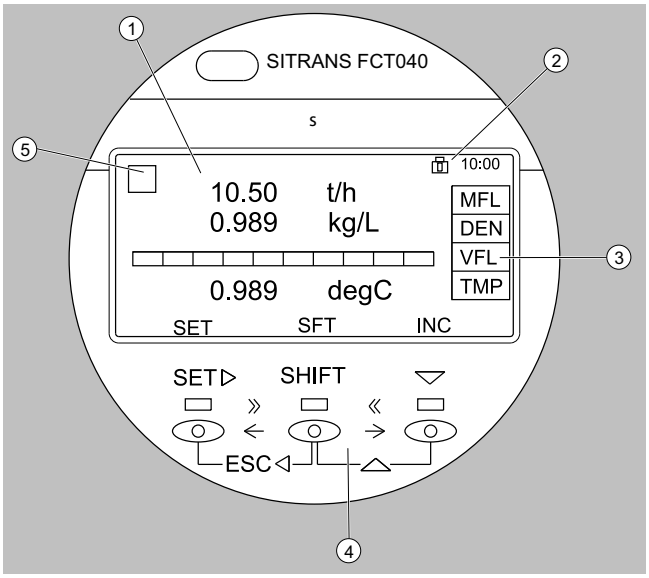
Available function blocks are also influenced by the type of device description file (GSD) being used. For further details, please contact your regional Siemens Measurement Intelligence team.

MODBUS

(in preparation for later release)

- The MODBUS interface is available with up to two additional input/output options.
- When selected, MODBUS communication is supplied on the terminal pairs I/O 3 and I/O 4.
- The digital MODBUS communication signal is in accordance with EIA-485 standard (RS 485).

© Siemens AG 2024



## Technical specifications (continued)

PROFINET over Ethernet-APL
(in preparation for later release)

| Display attributes | |
|---|---|
| Type | 4-line dot-matrix display |
| Resolution | 128 × 64 (W × H) dots |
| Size | 64.6 × 31.2 mm (2.54" × 1.23") |
| Control | via IR switches |

Numerical values entered via the display are limited to six digits for process variables and eight digits for totalizer.

Display layout

| | |
|---|---|
| 1 | Measured quantities and units |
| 2 | Status icon and time |
| 3 | Measured quantity abbreviation |
| 4 | IR switches |
| 5 | Alarm symbol |

The controls on the display are IR switches. They respond as soon as an object, such as a finger, is in proximity. It is not necessary to apply pressure to the display surface.

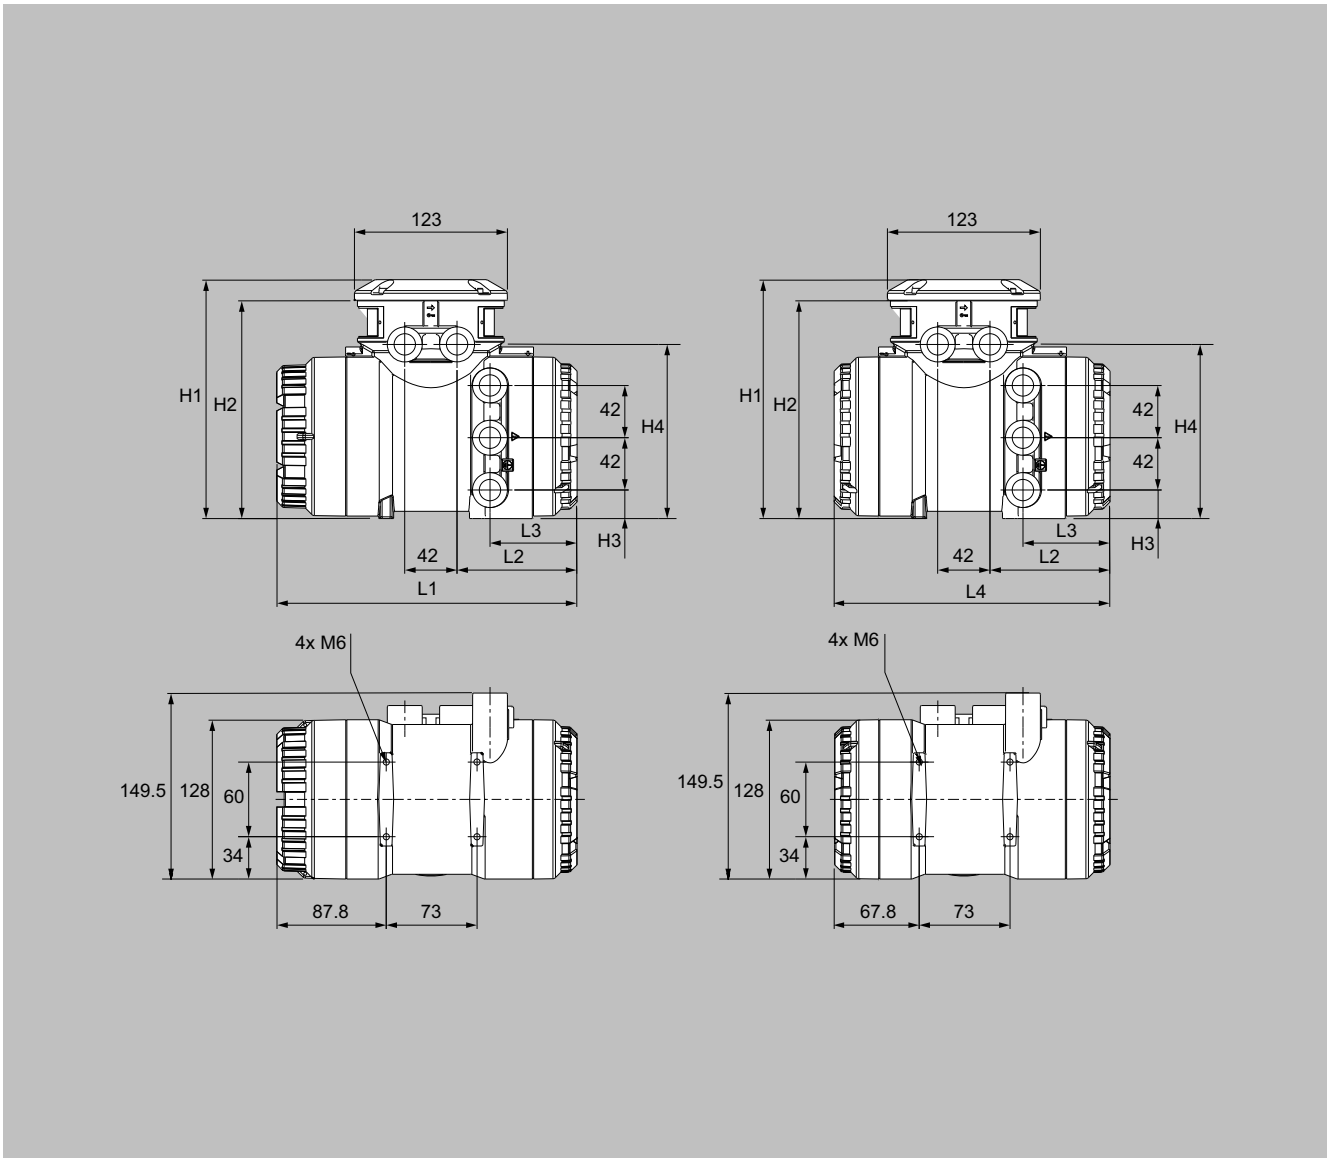
The display unit includes a slot for the microSD card.

| microSD card specifications | |
|---|---|
| Type | Industrial Grade microSD card, compliant with SD specification version 2.0 |
| Physical dimension | 15 × 11 × 1.0 mm (± 0.1 mm) (0.6 × 0.4 × 0.04 inch (± 0.004 inch)) |
| Capacity | 1 GB |
| Sequential throughput (read) | 24.01 MB/s |
| Sequential throughput (write) | 17.96 MB/s |

It is recommended to use the microSD card included with the SITRANS FCT transmitter. Functionality of the device cannot be guaranteed if other cards are used.

Cable specifications

For remote type devices, an interconnecting cable must be used to connect the sensor to the transmitter. The device specifications, stated in this document, are valid only if one of the original SITRANS FC interconnecting cables is used.



Standard cable length options are specified up to 30 m are specified in the order code to maintain the stated specifications. Cables longer than 30 m (98 ft) are available but must be ordered as separate items. For further details, please contact your regional Siemens Measurement Intelligence team.

## Overview

FCT040 is the advanced transmitter, offering a wider range of application solutions with improved performance. The user can select additional measurements and functions at time of ordering to include concentration (fraction), viscosity, batch control and heat calculation.

The FCT040 transmitter is available in compact or remote design and can be combined with all SITRANS FC sensors. The selection is made within the complete SITRANS FC ordering code.

Spare transmitters are selected using the SITRANS FC ordering code, but with no sensor selected.

Example of SITRANS FCT transmitter mounted on SITRANS FCS600

FCT transmitter and SITRANS FCS100

Following features are available in the FCT040 transmitter:

- Tube health check
- Standard concentration measurement
- Petroleum measurement function
- Fraction (advanced concentration) measurement
- Viscosity function
- Batching function

## Overview (continued)

## Function

***Measurement of heat quantity***

• Order code: **S11**

This function calculates the total fuel calorific value of the measured fluid. Either a constant value of the calorific value of the fluid can be used, or an additional device like a gas chromatograph can provide the instantaneous calorific value via the analog input of the FCT040 transmitter. Based on the fluid flow, the total calorific energy of the fluid is calculated.

For questions regarding a specific application, contact your regional Siemens Measurement Intelligence team.

***Tube health check***

• Order code: **S12**

Tube health check monitors key diagnostics, including tube stiffness, driver and pickups. Self-verification alerts to potential performance issues due to unplanned process events, for example gas or vapor breakout, or solid deposits building up in the tubes. The user defines verification frequency and alarm behavior. Verification results indicate whether preventive maintenance action is required.

***Petroleum measurement function***

• Order code: **S14**

The Net Oil Computing (NOC) function provides real-time measurements of water cut and includes American Petroleum Institute (API) correction according to API MPMS Chapter 11.1.

Oil sometimes contains entrained gas. SITRANS FC flowmeters measure the density of the combined emulsion oil and gas, which is lower than the oil density. The NOC function includes a Gas Void Fraction (GVF) parameter to be set.

***Viscosity function***

• Order code: **S15**

Viscosity is sometimes used as reference value to activate other processes like fluid heating systems.

The viscosity estimation is calculated based on a comparison between measured pressure loss and a calculated value between two points of the pipe. A differential pressure transmitter is required to use this function. Its output is connected to the analog input of the FCT040. Based on an iteration process, a viscosity value is determined.

***Standard concentration measurement***

• Order code: **S16**

Used for concentration measurements of emulsions or suspensions when density of the fluid involved depends only on temperature.

The standard concentration measurement can be used for many low-concentration solutions if there is only minor interaction between the liquids, or if the miscibility is negligible.

***Fraction measurement (advanced concentration)***

Up to four pre-configured fraction ranges can be selected using the SITRANS FC option order codes from the table below.

| Order code | Fraction description | Type | Range | Units | Temperature range |
|---|---|---|---|---|---|
| **G01** | Sugar / water (sucrose solution) | Mass fraction | 0 ... 85 | °Bx | 0 ... 80 °C (32 ... 176 °F) |
| **G02** | NaOH / water (sodium hydroxide solution) | Mass fraction | 2 ... 50 | % | 0 ... 100 °C (32 ... 212 °F) |
| **G03** | KOH / water (potassium hydroxide solution) | Mass fraction | 0 ... 60 | % | 54 ... 100 °C (129 ... 212 °F) |
| **G04** | $NH_4NO_3$ / water (ammonium nitrate solution) | Mass fraction | 1 ... 50 | % | 0 ... 80 °C (32 ... 176 °F) |
| **G05** | $NH_4NO_3$ / water (ammonium nitrate solution) | Mass fraction | 20 ... 70 | % | 20 ... 100 °C (68 ... 212 °F) |
| **G06** | HCl / water (hydrochloric acid) | Mass fraction | 22 ... 34 | % | 20 ... 40 °C (68 ... 104 °F) |
| **G07** | $HNO_3$ / water (nitric acid) | Mass fraction | 50 ... 67 | % | 10 ... 60 °C (50 ... 140 °F) |
| **G09** | $H_2O_2$ / water (hydrogen peroxide) | Mass fraction | 30 ... 75 | % | 4 ... 44 °C (39 ... 111 °F) |
| **G10** | Ethylene glycol / water (homogenous mixture) | Mass fraction | 10 ... 50 | % | -20 ... +40 °C (-4 ... +104 °F) |
| **G11** | Amylum (starch) / water (paste-like suspension) | Mass fraction | 33  43 | % | 35 ... 45 °C (95 ... 113 °F) |
| **G12** | Methanol / water (homogenous mixture) | Mass fraction | 35 ... 60 | % | 0 ... 40 °C (32 ... 104 °F) |
| **G20** | Alcohol / water (homogenous mixture) | Volume fraction | 55 ... 100 | % | 10 ... 40 °C (50 ... 104 °F) |
| **G21** | Sugar / water (sucrose solution) | Mass fraction | 40 ... 80 | °Bx | 75 ... 100 °C (167 ... 212 °F) |
| **G30** | Alcohol / water (homogenous mixture) | Mass fraction | 66 ... 100 | % | 15 ... 40 °C (59 ... 104 °F) |
| **G37** | Alcohol / water (homogenous mixture) | Mass fraction | 66 ... 100 | % | 10 ... 40 °C (50 ... 104 °F) |

The user is responsible to ensure chemical compatibility of the wetted parts material in combination with the measured chemicals. For strong acids or oxidizers, a variant with wetted parts made of alloy 22/2.4602 is advised.

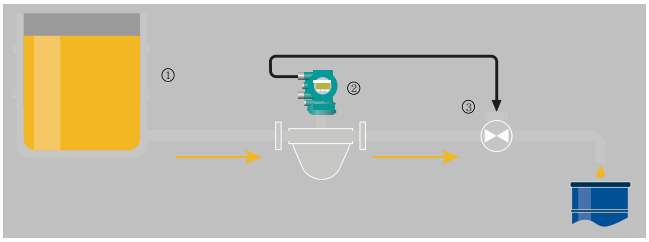
***Batching function***

Batching and filling processes are found in many industries: food and beverage, cosmetic, pharmaceutical, oil and gas and chemical.

SITRANS FCT040 transmitters offer an integrated batching function to carry out the task. A self-learning algorithm optimizes the process to provide accurate and reliable results.

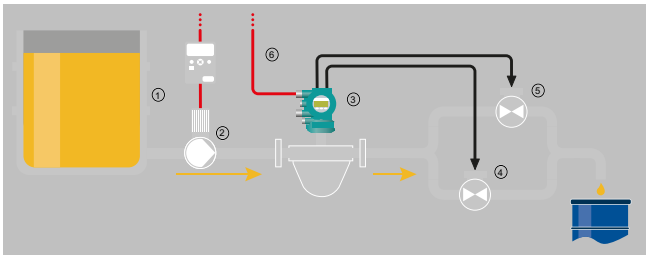
The function supports two filling modes:

• Single-stage batch control with single valve



• Two-stage batching to control two valves for more accurate filling

© Siemens AG 2024



## Function (continued)

The error management function allows the user to set alarms and warnings according to the application.

## Configuration

***Overview of available inputs, outputs and digital communications***

The table below provides a matrix of all available combinations for the FCT040 transmitter.

Each combination is defined by a blend of two order code options:

- Ch 1 codes in the form "**E..**" define the required type of digital communication.
- Ch 2-4 codes in the form "**F..**" define the required combination of conventional inputs and outputs.

Abbreviations used in the table:

- Pulse or status output is abbreviated to "P/S output".
- Status only output is abbreviated to "S output".
- Status input is abbreviated to "S input".

| Ch 1 code | Ch 2-4 code | I/O 1 (Channel 1) | I/O 2 (Channel 2) | I/O 3 (Channel 3) | I/O 4 (Channel 4) |
|---|---|---|---|---|---|
| **E00** | **F00** | none | none | none | none |
| **E07** [1] | **F01** | passive mA HART output | passive P/S output | passive mA output | none |
| **E07** [1] | **F02** | passive mA HART output | passive P/S output | passive mA output | passive P/S output |
| **E07** [1] | **F03** | passive mA HART output | passive P/S output NAMUR | passive mA output | none |
| **E07** [1] | **F04** | passive mA HART output | passive P/S output NAMUR | passive mA output | passive P/S output NAMUR |
| **E06** | **F11** | active mA HART output | passive P/S output | none | none |
| **E06** | **F12** | active mA HART output | passive P/S output | passive S output | passive P/S output |
| **E06** | **F13** | active mA HART output | passive P/S output | volt free S input | passive P/S output |
| **E06** | **F14** | active mA HART output | passive P/S output | passive P/S output | active mA input |
| **E06** | **F15** | active mA HART output | passive P/S output | passive P/S output | passive mA input |
| **E06** | **F16** | active mA HART output | passive P/S output | passive mA output | active mA input |
| **E06** | **F17** | active mA HART output | passive P/S output | passive mA output | passive mA input |
| **E06** | **F18** | active mA HART output | passive P/S output | volt free S input | active mA input |
| **E06** | **F19** | active mA HART output | passive P/S output | volt free S input | passive mA input |
| **E06** | **F20** | active mA HART output | passive P/S output | volt free S input | active P/S output |
| **E06** | **F21** | active mA HART output | passive P/S output | volt free S input | active P/S output and pull-up |
| **E06** | **F22** | active mA HART output | passive P/S output | passive P/S output | active mA output |
| **E06** | **F23** | active mA HART output | passive P/S output | volt free S input | active mA output |
| **E14** | **F31** | none | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F32** | passive P/S output | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F33** | active mA input | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F34** | passive mA input | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F35** | active P/S output | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F36** | active P/S output and pull-up | passive P/S output | MODBUS C | MODBUS A & B |
| **E14** | **F37** | active mA output | passive P/S output | MODBUS C | MODBUS A & B |
| **E10** | **F41** | PROFIBUS PA | passive pulse output | none | none |
| **E10** | **F42** | PROFIBUS PA (IS) | passive pulse output (IS) | none | none |

[1] Any combinations with passive mA HART output on Channel are only possible with Ex approval. All outputs in these combinations are intrinsically safe.

© Siemens AG 2024

## Technical specifications

### *Mechanical specifications*

| Material specifications | | | |
|---|---|---|---|
| **Housing material options** | **Coating** | **Design** | **Order code position 14** |
| Cast aluminum alloy Al-Si10Mg(Fe) | Standard coating[1)] | Remote transmitter | C or D |
| Cast aluminum alloy Al-Si10Mg(Fe) | Corrosion resistant coating[2)] | Remote transmitter | E or F |
| ASTM CF8M stainless steel | None | Remote transmitter | G or H |
| **Display** | | | |
| Material of the lid window | Glass | | |
| **Mounting bracket[3)]** | | | |
| Material | AISI 316L stainless steel | W Nr. 1.4404 | |
| **Nameplates[4)]** | **Process temperature range** | **Nameplate material** | |
| Transmitter with cast aluminum housing | Not applicable | Foil | |
| Transmitter with ASTM CF8M stainless steel housing | Not applicable | AISI 316L ss | |

1) Standard coating is urethane cured polyester powder coating.
2) Corrosion protection coating is a three-layer coating with high chemical resistance (polyurethane coating on two layers of epoxy).
3) Only the remote transmitters are supplied with a mounting bracket.
4) Nameplate material depends on the materials selected for SITRANS FC sensors.

### *Electrical specifications*

| Power supply | |
|---|---|
| Alternating current voltage (rms) | nominal 24 V AC (-15% ... +10%), or<br>100 ... 240 V AC (-20% ... +10%) |
| Frequency | 47 ... 63 Hz |
| Direct current voltage | nominal 24 V DC (-15% ... +20%) or<br>100 ... 120 V DC (-10% ... +8.3%) |
| **Power consumption** | P ≤ 10 W (including sensor) |

Notes:

- For DNV approval option supply voltage is limited to 24 V.
- NAMUR NE21 testing specifies the range 24 V DC ±20% under NE21 test conditions.

Power supply failure

In the event of a power failure, the flowmeter data are backed up on a non-volatile internal memory. In case of devices with display, the characteristic sensor values, such as nominal diameter, serial number, calibration constants, zero point and the error history are also stored on a microSD card.

Galvanic isolation

All circuits for inputs, outputs and power supply are galvanically isolated from each other.

### *Analog inputs and outputs*

Analog input

| Analog inputs | |
|---|---|
| **Active current input[1)]** | |
| Nominal input current range | 4 ... 20 mA |
| Maximum input current range | 2.4 ... 21.6 mA |
| Internal power supply | 24 V DC ±20% |
| Internal load resistance | ≤ 160 Ω |
| **Passive current input[2)]** | |
| Nominal input current range | 4 ... 20 mA |
| Maximum input current range | 2.4 ... 21.6 mA |
| External power supply | 10.5 ... 32 V DC |
| Internal load resistance | ≤ 160 Ω |

1) The active current input is provided for connecting a two-wire transmitter with an output signal of 4 ... 20 mA.

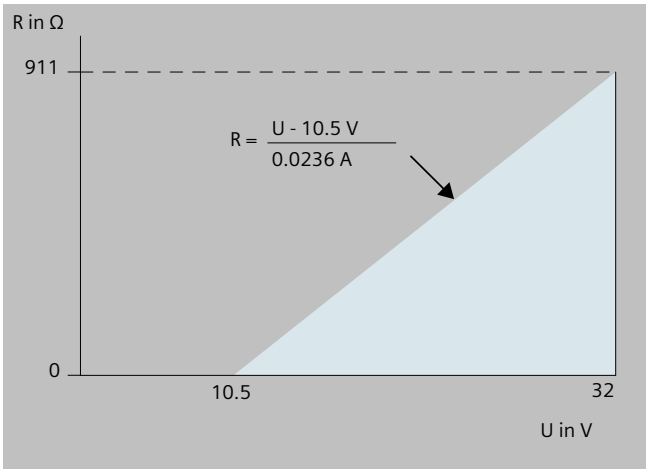
2) The passive current input is provided for connecting a four-wire transmitter with an active current output signal.

Note: One analog current input is available for external analog devices.

Analog output

Up to two analog outputs can be selected at time of ordering. The analog outputs can be configured to represent the following measured values:

- Flow rate (mass, volume, net partial component flow of a mixture)
- Density
- Temperature
- Pressure
- Concentration



HART communication, when selected, is supplied on channel 1 (I/O 1). The current output may be operated in compliance with the NAMUR NE43 standard.

| Analog outputs | |
|---|---|
| **Active current output** | |
| Nominal output current range | 4 ... 20 mA |
| Maximum output current range | 2.4 ... 21.6 mA |
| Load resistance | ≤ 750 Ω |
| Load resistance for secure HART communication | 230 ... 600 Ω |
| **Passive current output** | |
| Nominal output current range | 4 ... 20 mA |
| Maximum output current range | 2.4 ... 21.6 mA |
| External power supply | 10.5 ... 32 VDC |
| Load resistance for secure HART communication | 230 ... 600 Ω |
| Load resistance at current output | ≤ 911 Ω |

© Siemens AG 2024

## Technical specifications (continued)

Maximum load resistance as a function of an external power supply voltage

1) The active current input is provided for connecting a two-wire transmitter with an output signal of 4 ... 20 mA.
2) The passive current input is provided for connecting a four-wire transmitter with an active current output signal.

### *Digital inputs and outputs*

Digital inputs (status)

Do not connect a signal source with electric voltage.

The status input is provided for use of voltage-free contacts with the following specification:

| | |
|---|---|
| **Resistance when closed** | < 200 Ω |
| **Resistance when open** | > 100 kΩ |

### *Digital communications*

Each transmitter is configured with one default digital communication interface, selectable in the SITRANS FC order code.

HART

When selected, HART communication is supplied on the output terminal pair I/O 1.

Up to three further Input/Output options can be configured for output terminal pairs I/O 2, I/O 3, and I/O 4.

HART is available with either non-intrinsically safe or intrinsically safe outputs.

PROFIBUS PA

- When selected, PROFIBUS PA communication is supplied on the output terminal pair I/O 1.
- PROFIBUS PA interface is available with and without intrinsic safety.
- PROFIBUS PA digital communication signal is in accordance with IEC 61158/61784.
- Maximum voltage and correct polarity must be observed for wiring.
- Power supply: 9 ... 32 V DC
- Current draw: 15 mA (maximum)
- Compliance with PA profile revision 3.02 supporting: Condensed Status (NE107)
- Device identification number (IDENT_NUMBER) adaption

Digital output

| **Digital outputs** | |
|---|---|
| **Active pulse output available on Pulse/Status output, connection of an electronic counter[1)]** | |
| Load resistance | > 1 kΩ |
| Internal power supply | 24 V DC ±20% |
| Maximum pulse rate | 10 000 pulses/s |
| Frequency range | 0 ... 12.5 kHz |
| **Active pulse output available on Pulse/Status output, connection of an electromechanical counter** | |
| Maximum current | 150 mA |
| Average current | ≤ 30 mA |
| Internal power supply | 24 V DC ±20% |
| Maximum pulse rate | 2 pulses/s |
| Pulse width | 20, 33, 50, or 100 ms |
| **Active pulse output available on Pulse/Status output, with internal pull-up resistor** | |
| Internal power supply | 24 V DC ±20% |
| Internal pull-up resistor | 2.2 kΩ |
| Maximum pulse rate | 10 000 pulses/s |
| Frequency range | 0 ... 12.5 kHz |
| **Passive pulse output available on Pulse/Status output[1)]** | |
| Maximum load current | ≤ 200 mA |
| External power supply | ≤ 30 V DC |
| Maximum pulse rate | 10 000 pulses/s |
| Frequency range | 0 to 12.5 kHz |
| **Active status output available on Pulse/Status output[2)]** | |
| Load resistance | > 1 kΩ |
| Internal power supply | 24 V DC ±20% |
| **Active status output available on Pulse/Status output, with internal pull-up resistor[3)]** | |
| Internal pull-up resistor | 2.2 kΩ |
| Internal power supply | 24 V DC ±20% |
| **Passive status output available on Pulse/Status output, or Status output** | |
| Output current | ≤ 200 mA |
| External power supply | ≤ 30 V DC |
| **Passive pulse or status output available on Pulse/Status output (NAMUR)** | Output signals according to EN 60947-5-6 (previously NAMUR, worksheet NA001) |

1) Maximum voltage and correct polarity must be observed for wiring.
2) Since this is a transistor contact, maximum allowed current as well as polarity and level of output voltage must be observed during wiring.
3) A relay must be connected in series to switch alternating voltage.

### *Summary of available function blocks – PROFIBUS PA*

| Function block | Code | Description |
|---|---|---|
| **Transducer block** | FTB | Flow |
| | CTB | Concentration |
| | LTB | LCD Indicator |
| | MTB | Maintenance |
| | SDBT | Advanced diagnostics |
| **Analog input block [1)]** | AI1 | Mass flow |
| | AI2 | Density |
| | AI3 | Temperature |
| | AI4 | Volume flow |
| | AI5 | Reference density |
| | AI6 | Corrected (normal/standard) volume flow |

© Siemens AG 2024

## Technical specifications (continued)

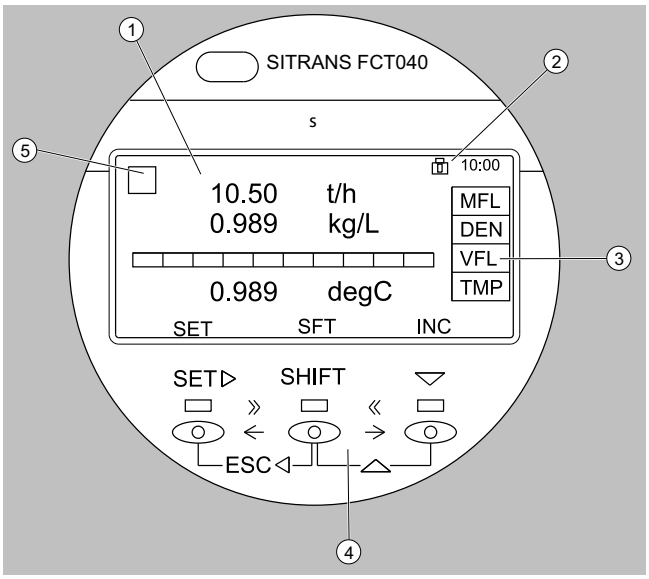
| Function block | Code | Description |
|---|---|---|
| **Totalizer block** [1] | TOT1 | Mass |
| | TOT2 | Volume |
| | TOT3 | Corrected (normal/standard) volume |
| **Analog output block** [1] | AO | Pressure |

[1] Factory default setting. Assignment can be changed by parameter "channel".

Available function blocks are also influenced by the type of device description file (GSD) being used. For further details, please contact your regional Siemens Measurement Intelligence team.

MODBUS

(in preparation for later release)



- The MODBUS interface is available with up to two additional Input/Output options.
- When selected, MODBUS communication is supplied on the terminal pairs I/O 3 and I/O 4.
- The digital MODBUS communication signal is in accordance with EIA-485 standard (RS 485).

PROFINET over Ethernet-APL

(in preparation for later release)

| Display attributes | |
|---|---|
| Type | 4-line dot-matrix display |
| Resolution | 128 (W) x 64 (H) dots |
| Size | 64.6 mm x 31.2 mm (2.54" x 1.23") |
| Control | via IR switches |

Numerical values entered via the display are limited to six digits for process variables and eight digits for totalizer.

Display layout

| | |
|---|---|
| 1 | Measured quantities and units |
| 2 | Status icon and time |
| 3 | Measured quantity abbreviation |
| 4 | IR switches |
| 5 | Alarm symbol |

The controls on the display are IR switches. They respond as soon as an object, such as a finger, is in proximity. It is not necessary to apply pressure to the display surface.

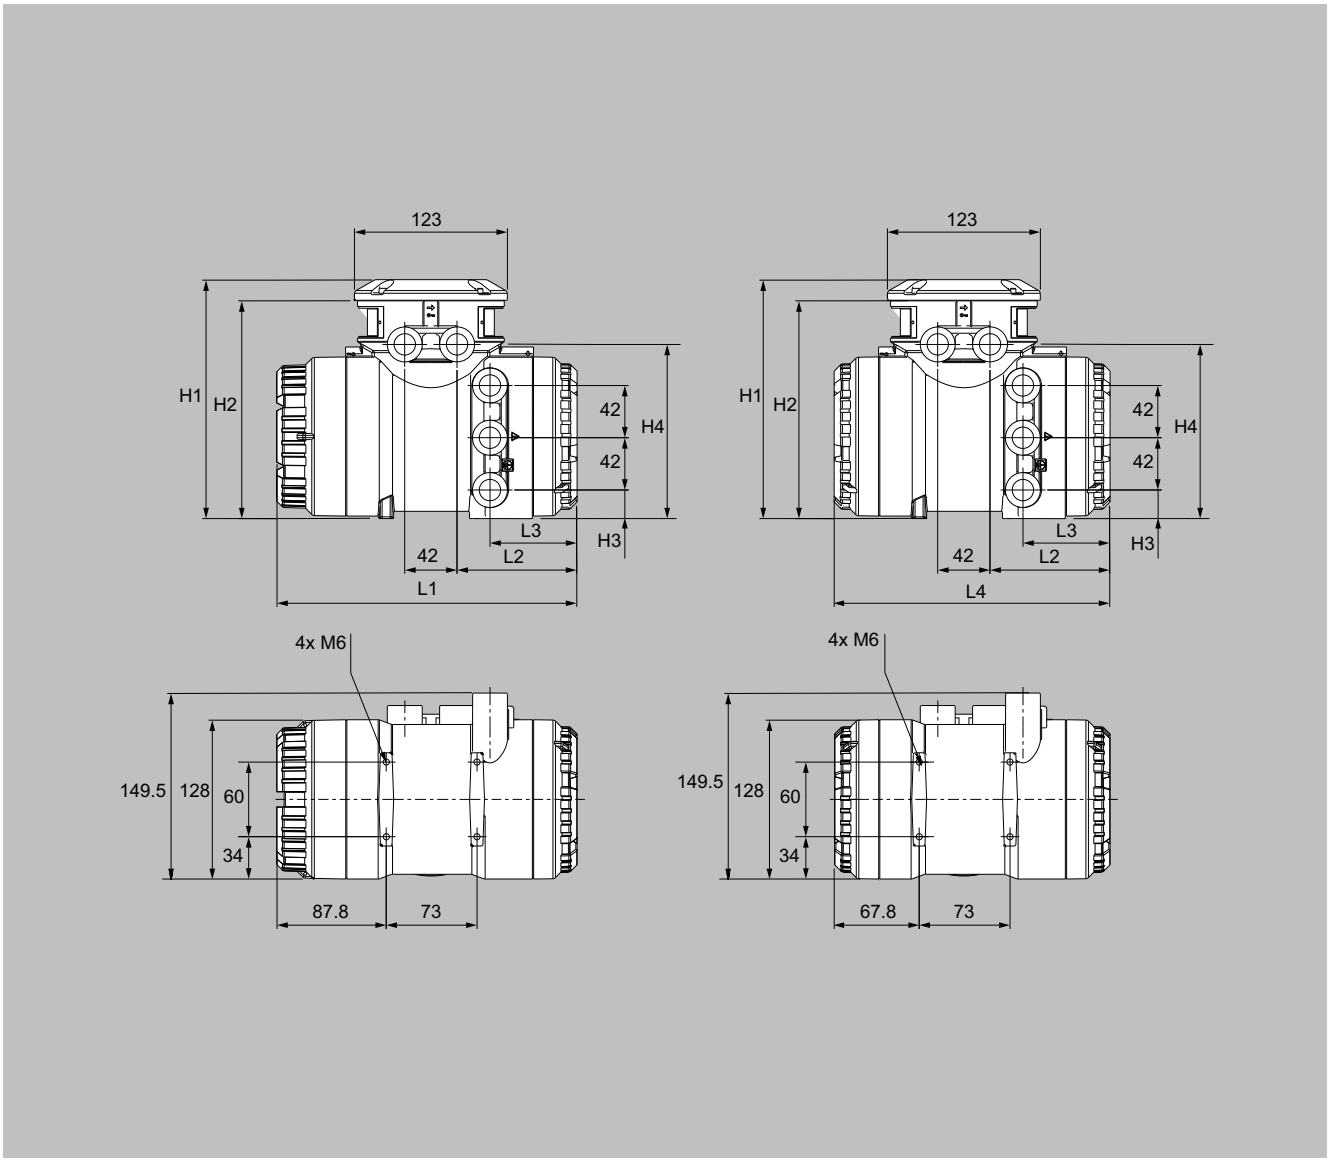
The display unit includes a slot for the microSD card.

| microSD card specifications | |
|---|---|
| Type | Industrial Grade microSD card, compliant with SD specification version 2.0 |
| Physical dimension | 15 mm x 11 mm x 1.0 mm (± 0.1 mm) (0.6" x 0.4" x 0.04" (± 0.004")) |
| Capacity | 1 GB |
| Sequential throughput (read) | 24.01 MB/s |
| Sequential throughput (write) | 17.96 MB/s |

It is recommended to use the microSD card included with the SITRANS FCT transmitter. Functionality of the device cannot be guaranteed if other cards are used.

Cable specifications

For remote type devices, an interconnecting cable must be used to connect the sensor to the transmitter. The device specifications, stated in this document, are valid only if one of the original SITRANS FC interconnecting cables is used.



Standard cable length options are specified up to 30 m are specified in the order code to maintain the stated specifications. Cables longer than 30 m (98 ft) are available but must be ordered as separate items. For further details, please contact your regional Siemens Measurement Intelligence team.

## Overview

The flowmeter systems of the SITRANS FC100 series are the precision Coriolis multi-parameter flowmeter for low flow applications.

They are formed by one FCS100 sensor and one FCT transmitter:

- SITRANS FC120 is the combination of the FCS100 sensor and the FCT020 transmitter
- SITRANS FC140 is the combination of the FCS100 sensor and the FCT040 transmitter

Features:

- Compact dual curved alloy 22 measuring tubes
- Process connection: flange, thread or hygienic clamp
- Nominal sizes: DN 1 to DN 8
- Connection sizes: DN 6 to DN 40 (¼" to 1½")
- Nominal flow rates: 21 kg/h to 950 kg/h (46 lb/h to 2 094 lb/h)
- FCS100 sensors always combine with a remote transmitter via a connecting cable
- Installation of sensor and transmitter in different locations

FCS100 sensor and FCT020/040 transmitter

## Benefits

***Product features aligned to user value targets***

| | User value targets | SITRANS FC features and solutions |
|---|---|---|
| **Engineering and project management** | • Reduce engineering investment<br>• Cut specification effort<br>• Minimize project expenditure<br>• Decrease the spending on each measurement point<br>• Eliminate function duplication<br>• Reduce number of suppliers | • Siemens project teams offer complimentary evaluation of customer specifications, provided by regional and HQ experts<br>• Simple product selection using intuitive sizing software<br>• One SITRANS FC device can typically provide three to six individual measurements, all transmitted via digital communication, when planned during pre-project design<br>• Added value functions: batch control, viscosity, thermal energy, concentration measurement (Fraction) of two-component solutions and pressure compensation |
| **Installation** | • Reduce footprint and transport outlay of OEM machinery<br>• Lower installation complexity<br>• Avoid costly modifications of existing plant | • Can be installed in horizontal or vertical (self-draining) pipes<br>• Twin tube bend design delivers strong signal to noise characteristic resistant to external influence, so install in tight spaces with no inlet and outlet restrictions<br>• Adaptable to existing pipes: typically, three or four connection sizes for each sensor size<br>• Flexible selection of traditional inputs, outputs and digital communications |
| **Configuration and commissioning** | • Shorter commissioning schedules with lower costs<br>• Faster start-up with reduced outgoings | • Easy setup wizard delivers working meters straight after start-up<br>• microSD card stores sensor calibration data and default setup<br>• Simple configuration using Process Device Manager (PDM)<br>• Siemens device-specific faceplates simplify operation in plantwide control systems |
| **Efficient plant operation** | • Improve finished product consistency to reduce waste<br>• Keep process performance when scaling production up or down<br>• Optimize process control<br>• Improve finished product quality enabling higher levels of profit<br>• Reduce downtime with fast resolution of process upsets<br>• Improve asset performance | • SITRANS FC meters are calibrated in rigs accredited to EN/ISO 17025 to ensure consistently high performance of flow, density, and concentration measurements<br>• First-class zero-point quality maintains high accuracy into the low flow region<br>• High sensitivity and intelligent dynamic range keeps the measurement active in demanding high fluid damping cases<br>• Designed-in resilience to process extremes<br>• Self-verification alerts to potential performance issues due to unplanned process events, for example gas or vapor breakout or solid deposits building up in the tubes<br>• Diagnostic data via local menu or PDM is backed by Siemens applications experts<br>• Intelligent Siemens SITRANS IQ apps for continuing asset evaluation |
| **Maintenance and asset management** | • Optimize technician training<br>• Reduce cost of spare parts<br>• Increase predictive maintenance<br>• Reduce production downtime and associated costs<br>• Decrease unplanned maintenance<br>• Maximize asset value | • Simple product design with interchangeable modular parts<br>• microSD card loads sensor-specific data to deliver fast service exchange<br>• Self-verification: tube health check monitors key diagnostics, including tube stiffness, driver and pickups; the user defines verification frequency and alarm behavior<br>• Verification results indicate whether preventive maintenance action is required<br>• Siemens SIMATIC Maintenance Station uses cyclical acquisition to provide life cycle reports and intelligent preventive maintenance strategies |
| **Industry compliance** | • Cut effort required to comply with Industry-specific demands<br>• Reduce resource needed to maintain regulatory compliance | • Food and beverage sector covered with EHEDG and 3-A approvals, polished tubes<br>• Global hazardous area approvals for international plant duplications<br>• Common and emerging digital networks covered: HART, PROFIBUS PA, PROFINET<br>• Class-leading safety: SIL2/SIL3, secondary containment, PED, NAMUR NE95 |

## Design

***Design options and related temperature range for FC100 series***

| Design version | Process temperature range |
|---|---|
| **Standard neck** | Standard [-50 ... 150 °C (-58 ... 302 °F)] |
| **Long neck** | Standard [-50 ... 150 °C (-58 ... 302 °F)] |
| | Medium [-50 ... 260 °C (-58 ... 302 °F)] |

FCS100 sensor (standard neck version) and remote transmitter

FCS100 sensor (long neck version) and remote transmitter

| | |
|---|---|
| 1 | FCS100 sensor |
| 2 | Process connection |
| 3 | Sensor terminal box |
| 4 | Connecting cable |
| 5 | Transmitter |

Compatible fluids

- Liquids
- Gases
- Mixtures, solutions, emulsions, suspensions and slurries

Primary measured variables

- Mass flow
- Density
- Temperature

Based on the primary measured quantities, the transmitter also calculates

- Volume flow

## Design (continued)

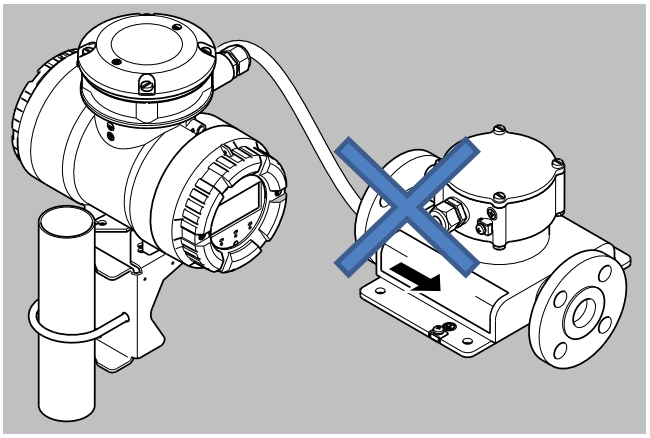
- Percent concentration (fraction) of a two-component mixture (FCT040 only)
- Partial component flow rate (net flow) of a mixture consisting of two components (FCT040 only)

The mass flow, volume flow, net flow measurements can be bi-directional.

Measurement variables for NTEP approval

- Mass flow uni-directional
- Volume flow uni-directional

Feature summary



- Possibly the most compact dual curve Coriolis flowmeter for precision measurement, starting at DN 1 nominal size
- Batching function with batch leakage detection and batch control by transmitter for precise dosing
- Accurate density measurement and up to four advanced concentration measurement data sets
- Sizes to suit pilot plants, R&D labs and high value fluid additives
- Wide choice of process connections, starting with DN 6 (¼ inch) for reduced installation efforts

***Installation guidelines***

FC100 series flow meters can be mounted horizontally, vertically and at an incline. The measuring tubes should be filled with the fluid during flow measurement as entrained gas may result in errors in measurement. Straight pipe runs at inlet or outlet are usually not required.

Avoid the following installation locations and positions:

- Measuring tubes as highest point in piping when measuring liquids
- Measuring tubes as lowest point in piping when measuring gases
- Immediately in front of a free pipe outlet in a downpipe
- Lateral positions

Avoid measuring tubes in sideways position resulting in possible non-homogeneous fluid separation

## Technical specifications

### *Mass flow rate of liquids*

The mass flow rate characteristics of SITRANS FC meters are defined by the values of zero stability, $Q_{flat}$, $Q_{nom}$ and $Q_{max}$.

Zero stability is the maximum allowable flow rate value that can be displayed at zero flow under reference conditions. It is a good indicator of the meter performance as flow rates reduce and approach zero.

- $Q_{flat}$ is the mass flow rate above which the base accuracy is maintained (0.1% when using FCT040 transmitters).
- $Q_{nom}$ is the nominal mass flow rate of water at reference conditions that would result in a pressure drop of 1 bar (15 psi).
- $Q_{max}$ is the recommended maximum mass flow rate for each sensor size.
