W 160: Miniature series for optimum solutions

- Photoelectric proximity switches, BGB
- Photoelectric proximity switches, energetic
- Photoelectric reflex switches

- Through-beam photoelectric switches
- P/e switches w. fibre-optic cable (proximity mode)
- P/e switches w. fibre-optic cable (through-beam mode)

Principal system characteristics are simple handling, large scanning ranges and a reduced number of sensor types thanks to integrated L.ON/D.ON switches. Integrated "intelligence" features such as pre-failure signalling output, test input (cable versions only) or external teach-in (WLL 160 T) increase system reliability under severe environmental conditions.

All W 160 optic variants are available in 2 housing versions with axial or 90° light emission.

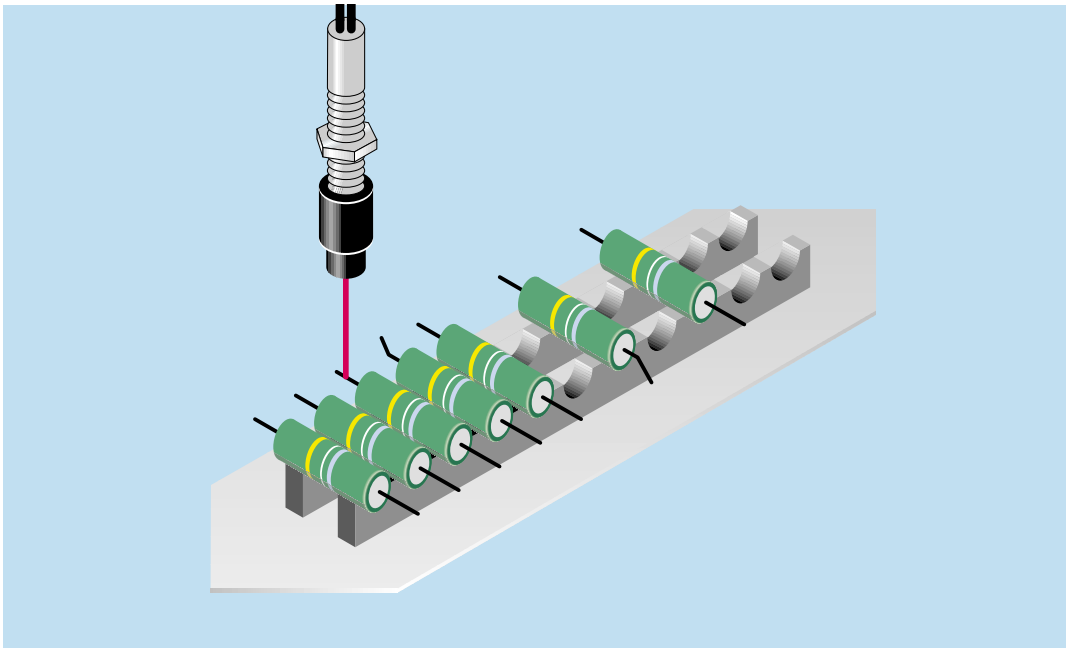
WLL 160 fibre-optic cable photoelectric switches with switching point adjustment (manual using potentiometers or automatic at the push of a button using the teach-in method) complete the W 160 series. LL 3 plastic fibre-optic cables with approx. 50 different configuration options are available as accessories.

W 160 switches have proven particularly successful in the following sectors:

- electronic component and printed circuit board production,
- the packaging and printing industries,
- assembly and handling systems,
- the construction of special-purpose machines, and
- conveyor systems.

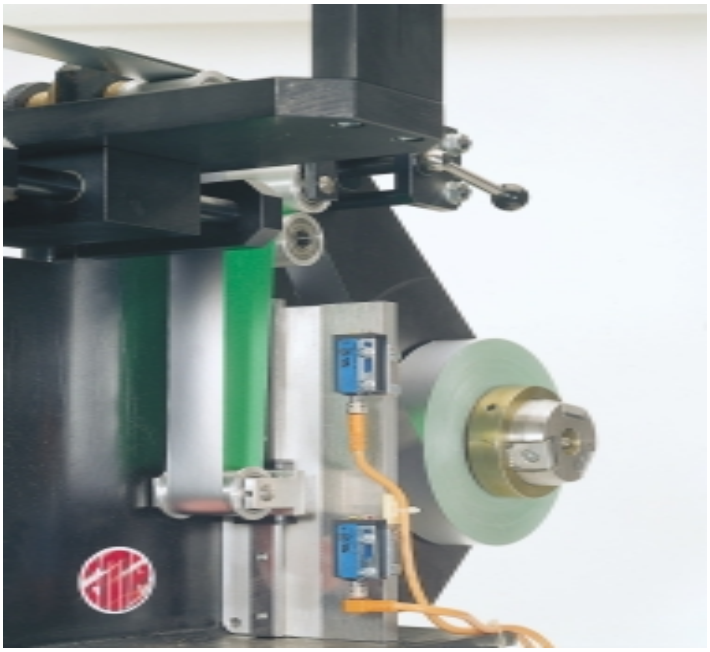
The scanning ranges:

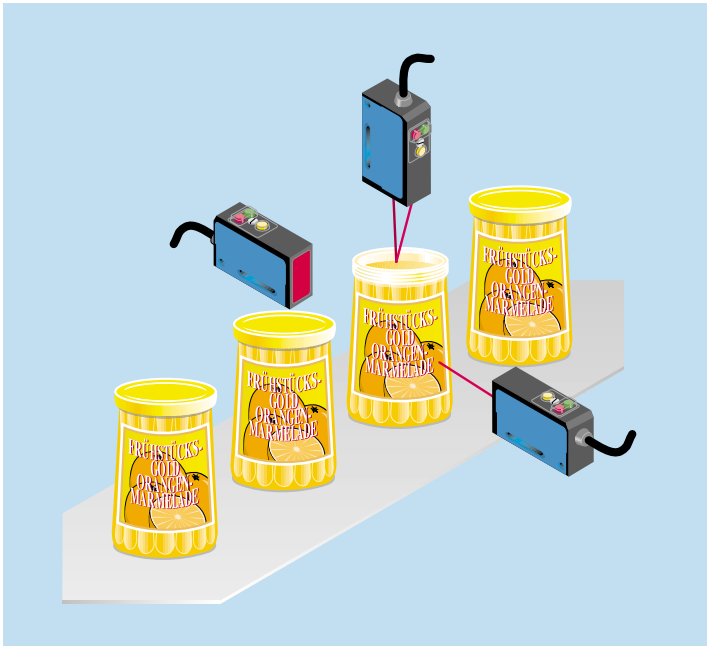
- WS/WE 160 through-beam photoelectric switch: 7 m, slotted mask as accessory,
- WL 160 photoelectric reflex switch: 3 m (PL 80 A), with polarising filter,
- WT 160 photoelectric proximity switch: energetic: scanning distance up to 300 mm (90 % remission), for standard scanning tasks; with focused optics: scanning distance between 8 and 50 mm, background blanking, small light spot, high sensitivity; with divergent optics (angle of dispersion approx. 40°): scanning distance up to 80 mm; ideal for transparent objects.



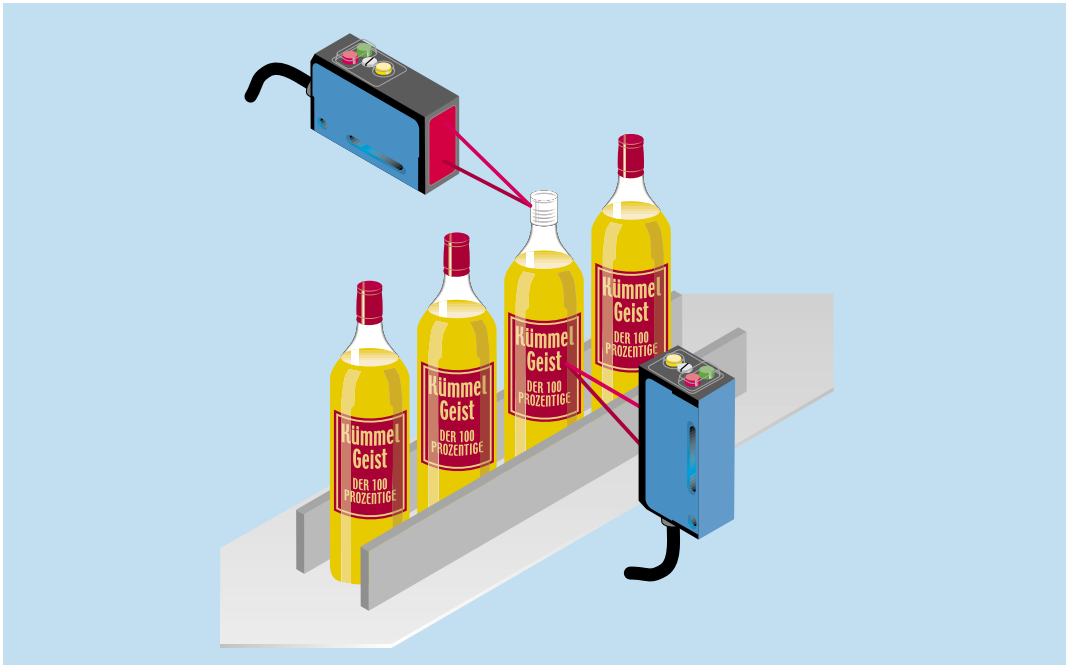
◄ Resistor production: fibre-optic WLL 160 switches can detect even the thinnest of wires without any problem.

▼ Checking the presence of caps and covers: Using a WT 160 photoelectric proximity switch to detect lids and WS/WE 160 through-beam photoelectric switches to monitor system timing.





▲ The WT 160 miniature photoelectric proximity switch is used in film and foil processing to control feed tension.



► Checking caps and labels using WT 160 photoelectric proximity switches.

Scanning distance 3…60 mm

Photoelectric proximity switches

- Horizontal and vertical models
- Focused scanner with background blanking and great sensitivity
- Contamination control with green LED indicator and pre-failure signalling output
- Test input for equipment and system testing

Dimensional drawing

Technical data	WLL 160T-	F132	F430	E132	E430
Suitable fibre-optic cables	LL 3 plastic fibre-optic cable series (p. 528)				
Scanning ranges	Depend. on fibre-optic cable type used				
Scanning range, through-beam system	0…500 mm (with tip adapter 0…2 m)				
Scanning distance, scanner system	0…70 mm [1]				
Adjustable sensitivity	Automatic, via TEACH-IN key or "MAX" mode				
Mode selector switch "MAX" position	Max. range, set permanently				
"SET" position	TEACH-IN key activated				
"RUN" position	TEACH-IN key inactive, equipment in sensor mode				
TEACH-IN manual	Via button (only active if mode switch is in "SET" position				
external TEACH-IN	Only active, if mode switch is in "RUN" position				
	PNP: control wire + V				
	NPN: control wire 0 V				
Light source [2], light type	LED, visible red light				
Light spot diameter	Dependent on range				
Opening angle of fibre-optic cables	Approx. 65°				
Supply voltage V_S	10…24 V DC				
Ripple [3]	≤ 5 V_{SS}				
Current consumption [4]	≤ 50 mA				
Switching outputs	PNP, open collector: Q				
	NPN, open collector: Q				
Output current I_A max.	100 mA				
Light receiver, switching type	Light-/dark-switching via slide switch				
Response time [5]/max. switching freq. [6]	≤ 0.6 ms/830/s, selectable				
Dependent on selected operating mode:					
"Mode"-selector switch in pos. "MAX"					
or selector switch "Response time"					
in "NORM" position					
Selector "response time" in pos. "HI"	≤ 0.3 ms/1660/s [7]				
Pre-failure signalling output (VMA)	30 mA, one shot, pulse length 40 ms				
Time delay T_{OFF} (switch-off delay)	40 ms fixed, selectable, per slide switch				
Connection types cable	PVC, 2 m [8]; 5 x 0.18 mm², ø 4.0 mm				
plug	4-pin, M8				
VDE protection class [9]	⧈				
Circuit protection [10]	A, B, C, D				
Enclosure rating	IP 66				
Ambient temperature T_A	Operation – 25 °C…+ 55 °C				
	Storage – 40 °C…+ 70 °C				
Weight with cable	Approx. 80 g				
with plug	Approx. 30 g				
Housing material	Housing: ABS				

1) Scanned material with 90 % remission (based on standard white according to DIN 5033)
2) Average service life 100.000 h at T_A = + 25 °C
3) May not exceed or fall short of V_S tolerances
4) Without load
5) Signal transit period with resistive load
6) With light/dark ratio 1:1
7) Scanning distance reduction approx. 30 %
8) Do not bend below 0° C
9) Reference voltage 50 V DC
10) A = V_S connections reverse-polarity protected
B = Inputs and outputs reverse-polarity protected
C = Interference pulse suppression
D = Outputs overload and short-circuit protected

Order information	
Type	**Part no.**
WLL 160T-F132	6 010 650
WLL 160T-F430	6 010 651
WLL 160T-E132	6 010 648
WLL 160T-E430	6 010 649

1. Precise sensitivity setting (via 2x push of button); WLL 160T

TEACH-IN steps

Switching speed	**Slide switch NORM or HI**			
Positioning of the parts	1 START TEACH IN	2 Detection system / Through-beam system  Parts present	3 Detection system / Through-beam system  Parts not present	4 STOP Sensor mode
■ TEACH-IN manual	Reset: RUN SET 	Push button 	Push button 	SET RUN 
■ TEACH-IN external ET via control signal	**MODE switch** in **RUN pos.**	Activate ET 1 signal ≈ 3 s	ET signal pause 3 ≈ 5 s, then activate ET signal > 1 s Alarm impulse 40 ms? TEACH-IN error, signal difference between part present/absent too small. Check application.	Automatically in sensor operation after 2 s

The TEACH-IN button is pressed twice. This operating mode provides **high sensitivity** and is ideal for **very precise switching points.** The WLL 160T optimizes the switching threshold and hysteresis via µ-processor automatically and stores them in EEPROM. No special experience in precise alignment of optoelectronic components necessary.

Applications:
Through-beam system; even thin or transparent objects are detected.
Detection system; strong background interference, small or dark scanning objects, simple marks with contrast differences.

2. Simple sensitivity setting (via 1x push of button); WLL 160T

TEACH-IN steps

Switching speed	**Slide switch NORM or HI**			
Positioning of the parts	1 START TEACH IN	2 Detection system / Through-beam system  Parts in light path / Parts not in light path		3 STOP Sensore mode
■ TEACH-IN manual	Reset: RUN SET 	Push button 		SET RUN 
■ TEACH-IN external ET via control signal	**MODE switch** in **RUN pos.**	Activate ET signal 1 ≈ 3 s No alarm output function in TEACH-IN mode		Automatically in sensor operation after 2 s.

The TEACH-IN button is only pressed once. This operating mode provides **simple handling.** The WLL 160T system detects existing background interference automatically. It optimizes the switching threshold and stores it in EEPROM. No special experience in setting the sensitivity of opto-electronic components necessary.

Applications:
Through-beam system; even small or partially transparent parts, which do not completely interrupt the light path, are detected. Detection system; background interference considered.

3. Max. scanning range, fixed setting; WLL 160T

Scanning range set permanently to MAX

TEACH-IN Steps

		1	2	3
Switching speed	**Always 830 Hz***	**NORM or HI (optionally 830 Hz or 1660 Hz)**		
Positioning of the parts	START → STOP	START TEACH IN	Detection system: Parts not in light path Through-beam system: Parts in light path	STOP Sensor mode
■ TEACH-IN manual	Slide switch to MAX pos. RUN → MAX*	Reset: RUN → SET	**Press button 1x** Beep	SET → RUN
■ TEACH-IN external ET via control signal	Not possible if selector switch is set to MAX, scanning range internally fixed to MAX.	**MODE switch** in **RUN** pos.	Activate ET signal 1 ≈ 3 s No alarm output function in TEACH-IN mode	Automatically in sensor operation after 2 s.

Manual: The **MAXimum scanning range** is set permanently in the MAX pos.with the MODE switch. *The switching speed is always 830 Hz, independent of the operating mode selector switch NORM/HI.
Via TEACH-IN: The **TEACH-IN button** is only pressed once – very simple handling.

The **maximum scanning range** is set via TEACH-IN. The WLL 160 T stores the basic signal in EEPROM and the switching threshold and hysterisis sensor operation. No special experience in precise alignment of optoelectronic components necessary.

Applications:
Very simple handling. This operating mode is ideal for large differences in signals. Through-beam system; objects interrupt the light beam. Detection system; no or little background interference, objects with large differences in contrast.

4. Moving objects; precise sensitivity adjustment (via 2x push of button); WLL 160T

TEACH-IN steps

	1	2		3
Switching speed	**Slide switch NORM or HI**			
Positioning of the parts	START TEACH IN	Detection system: Parts not in light path Through-beam system	Parts move through the light path	STOP Sensor mode
■ TEACH-IN manual	Reset: RUN → SET	**Press button > 1 s** Beep	**Press button > 3 s** Beep	SET → RUN
■ TEACH-IN external ET via control signal	**MODE switch** in Pos. **RUN**	Activate ET signal 1 ≈ 3 s	ET signal pause 3 ≈ 5 s; then activate ET signal > 1 s Alarm impuls 40 ms? TEACH-IN error, signal difference between part present/absent too small. Check application.	Automatically in sensor operation after 2 s.

TEACH-IN for moving objects.
The TEACH-IN button is pressed twice. The simple TEACH-IN handling makes precise sensitivity adjustment possible although objects are moving. The WLL 160T optimizes the switching threshold and hysteresis via µ-processor and stores them in EEPROM. No special experience in precise alignment of optoelectronic components necessary.

Applications:
Objects can only be taught in during movement (rejection check; equipment cannot be stopped precisely).

WLL 160T TEACH-IN functions

Response time/ switching speed

NORM: 830 Hz; max. system scanning distance.
HI: 1660 Hz, system scanning distance 70 %. Select before TEACH-IN!

Off-delay T_{OFF}

For switching output Q. Optional connection, 40 ms fixed. To ensure that your control can also detect shorter events.

Selector switch switching output Q

L.ON: light-switching
D.ON: dark-switching optionally in PNP or NPN.

Connection technique

Optionally M 8 plug, 4-pin (no alarm output) or 5-wire connecting cable.

Alarm output

■ **TEACH-IN mode:** signals TEACH-IN error.
■ **Sensor mode** (RUN): signals insufficient signal reserve, e.g., due to contamination or misalignment (not with plug version M 8 – 4-pin).

WLL 160T Assembly technology

Assembly and disassembly on top hat profile rail mounting by pulling the locking device.

Mounting technique

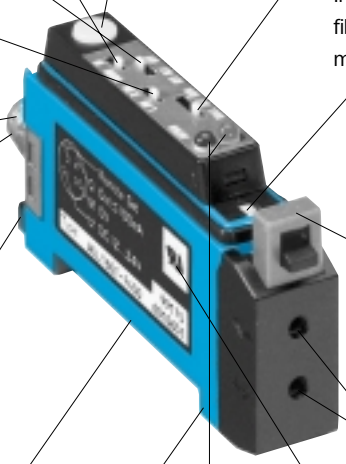
Simple snap-on on top hat profile rails. Mounting bracket supplied with equipment.

µ-processor technique with EEPROM

Permanent storage of taught-in switching threshold and hysteresis, even when there are longer interruptions of voltage.

TEACH-IN button

Sensitivity setting at the push of a button. No special knowledge of photoelectric switches required. Only active if MODE selector switch is set to SET pos. (manipulation protection).

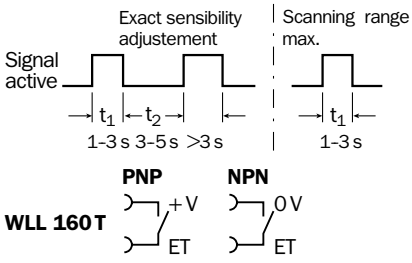


Indicator for correct fibre-optic cable mounting.

LED display red, green

■ **TEACH-IN mode:**
Signalization TEACH-IN process.
Permanently blinking: TEACH-IN error.
Permanently lit: TEACH-IN o.K.
■ **Sensor operation:**
LED red: switching threshold exceeded
LED green: received signal > 1.1 or < 0.9

External TEACH-IN signal ET



TEACH-IN mode selector switch

Separate from operating mode functions, and consequently simple and comprehensible handling; no dual functions.
■ **MAX:** Maximum scanning range set permanently. Caution: switching speed independent of operating mode selection; switching speed always 830 Hz.
■ **SET:** WLL 160T in manual TEACH-IN mode. Optimum switching point setting at the simple push of a button (1 or 2 times).
■ **RUN:** optionally
– TEACH-IN manual: The taught-in switching threshold and hysteresis are stored in EEPROM.
The WLL 160T operates in sensor mode after 2 s.
– External TEACH-IN (ET):
Optimum system adjustment using external control signal. Ideal if the WLL 160T is not accessible or part changes are often aligned automatically.

Fibre-optic cable lock

Press down bracket: fibre-optic cables are locked. Press the lug: fibre-optic cables are released.

Fibre-optic cable attachment

→ Transmitter fibre-optic cable
← Receiver fibre-optic cable
Suitable fibre-optic cable: **plastic fibre-optic cables of the LL3 series** (see the description of the LL3 variants).

BUZZER

For acoustic support. Short tone after TEACH-IN = O.K.
Long tone after TEACH-IN = error or application not suitable.
