1 Preface

Please read this instruction manual carefully before installation and start-up. Please observe all warnings and advice, both for your own safety and for general plant safety. If the device is not used in accordance with this instruction manual, then the intended protection can be impaired.

2 Safety Instructions and Warnings

Please use the device only if its technical condition is perfect. It should be used only for its intended purpose. Please bear in mind safety aspects and potential dangers and adhere to the operating instructions at all times.

2.1 Use according to the intended purpose

The preset counter 924 detects and measures pulses, times and frequencies up to max. 60 kHz and offers a wide variety of different operating modes. At the same time, the preset counter processes programmed presets. Use for any purpose over and beyond this will be deemed as not in accordance with its intended purpose and thus not complying with the requirements.

The application area for this device lies in industrial processes and controls, in the fields of manufacturing lines for the metal, wood, plastics, paper, glass, textile and other like industries. Overvoltages at the terminals of the device must be kept within the limits of Over-voltage Category II.

The device must only be operated when mounted in a panel in the correct way and in accordance with the section "Technical Data".

Correct operation of the device requires the mandatory use of the appropriate external safety fuse. Advice concerning the recommended fuse-protection can be found under "Technical Data".

The device is not suitable for use in hazardous areas and for areas excluded in EN 61010 Part 1.

If the device is used to monitor machines or processes in which, in the event of a failure of the device or an error made by the operator, there might be the risk of damaging the machine or causing an accident to the operators, then it is your responsibility to take the appropriate safety measures.

2.2 Mounting in a control panel

Mount the device away from heat sources and avoid direct contact with corrosive liquids, hot steam or similar.

Mounting instructions

1. Remove mounting clip from the device.
2. Insert the device from the front into the panel cut-out, ensuring the front-panel gasket is correctly seated.
3. Slide the fixing clip from the rear onto the housing, until the spring clamps are under tension and the upper and lower latching lugs have snapped into place.

2.3 Electrical Installation

The device must be disconnected from the power supply, before any installation or maintenance work is carried out. AC-powered devices must only be connected to the low-voltage network via a switch or circuit breaker.

Installation or maintenance work must only be carried out by qualified personnel.

Advice on noise immunity

All connections are protected against external sources of interference. The installation location should be chosen so that inductive or capacitive interference does not affect the device or its connecting lines! Interference (e.g. from switch-mode power supplies, motors, clocked controllers or contactors) can be reduced by means of appropriate cable routing and wiring.

Measures to be taken:

Use only shielded cable for signal and control lines. Connect cable shield at both ends.

The conductor cross-section of the cables should be a minimum of 0.4 mm².

The shield connection to the equipotential bonding should be as short as possible and with a contact area as large as possible (low-impedance).

Only connect the shields to the control panel, if the latter is also earthed.

Install the device as far away as possible from noise-containing cables.

Avoid routing signal or control cables parallel to power lines.

Cables and their insulation should be in accordance with the intended temperature and voltage ranges.

3 Description

6-digit multifunction LCD display

Easy-to-read 2-line LCD-display with annunciators for both the displayed preset and the status of the two outputs

Simultaneous display of the actual value and of the presets or auxiliary counters

Versions with/without backlit display

Add./Sub. Preset counter with two presets

Relay or optocoupler outputs

Easy-to-program

Simple preset entry via the front keys or via the Teach-In function

Step or tracking preset

Pulse, frequency, time or batch counter

Preset counter, Batch counter or Total Counter (cumulative count)

Set function for pulse and time counter

Multiplication and division factor (00.0001 .. 99.9999) for pulse counter and frequency meter

Averaging and Start Delay for frequency meter

Input modes:

Pulse counter: cnt.dir , up.dn , up.up , quad , quad2 , quad4 , A/B , (A-B)/Ax100%

Frequency meter: A , A – B , A + B , quad , A/B , (A-B)/Ax100%

Timer: FrErun , Auto , InpA.InpB , InpB.InpB

Output operations:

Add , Sub , AddAr , SubAr , AddBat , SubBat , AddTot , SubTot , Trail , TrailAr

4-stage RESET-Mode

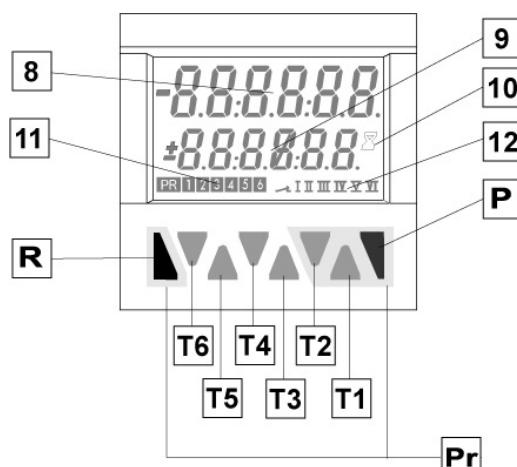

3-stage keypad locking (Lock)

MPI input for Display Latch, Teach-In function or Set function

Supply voltage 90 .. 260 VAC or

10 .. 30 VDC

4 Display/Operating elements

T1-6 Decade key T1 ... T6

P Prog/Mode key

R Reset key

8 Current count value / main counter

9 Preset value/ Total count/ Batch counter

10 Run display for Timer

11 Shows which preset value is being displayed

12 Shows which preset output is active

Pr Keys necessary for programming the parameters (highlighted in grey)

5 Inputs

5.1 INP A, INP B

Signal inputs: function acc. to operating mode. Max. frequency 60 kHz, can be damped in the programming menu to 30 Hz.

Pulse counter: Count inputs

Frequency meter: Frequency inputs

Timer: Start input or

Start/Stop inputs

5.2 RESET

Dynamic reset input: resets the pulse counter or timer to zero (adding mode) or to preset value 2 (subtracting mode). The reset input can be inhibited in the programming menu.

Pulse counter: RESET input

Frequency meter: no function

Timer: RESET input

5.3 GATE

Static gate input: function depending on operating mode.

Pulse counter: no counting while active

Frequency meter: no counting while active

Timer: no time measurement while active(Gate.hi)

no time measurement while not active (Gate.lo).

5.4 LOCK INPUT

Static keypad lock input for presets or programming. Lock-out level can be set in the programming menu.

5.5 MPI

Input. Programmable as Display Latch, Set or Teach-In input.

6 Outputs

6.1 Output 1

Relay with potential-free make (NO) contact or optocoupler with open emitter and collector

6.2 Output 2

Relay with potential-free make (NO) contact or optocoupler with open emitter and collector.

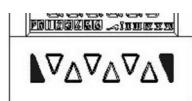

6.3 Active Outputs

An active output will be shown on the display as  or .

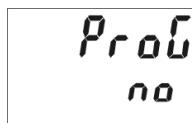

For safety switching the relays or optocoupler outputs can be inverted, i.e. the relay will be de-energized or the optocoupler output disabled when the presets are reached. To do this, the parameters Pr.OUT1 and Pr.OUT2 must be set to  (for permanent signal) or  or  (for timed signal).

7 Programming

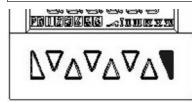

7.1 Entering the programming

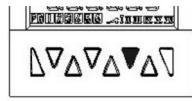

Press the Reset key and Prog/Mode key simultaneously for 3 s

⇒ The security prompt appears in the display

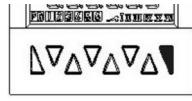

Programming can be exited again using the Prog/Mode key.

Press key T2 to continue with the programming

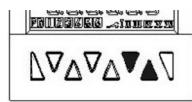

⇒ The security prompt appears in the display

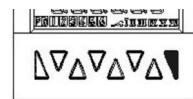

Enter the main menu by pressing the Prog/Mode key

7.2 Choice of main menus

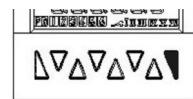

The menus are selected using the keys T2 (next) and T1 (back)

7.3 Entering a sub-menu

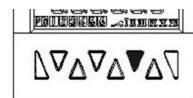

The sub-menu is opened with the Prog/Mode key and the first menu item is displayed.

7.4 Selecting the menu items

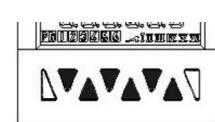

The Prog/Mode key is used to select a menu item within the sub-menu

7.5 Setting the menu items

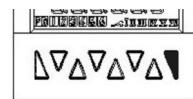

The T2 key is used to select the individual settings for the menu items

When setting count values, each decade has a key assigned to it. Each time the key is pressed, the value increments by one

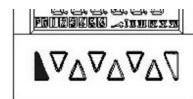

7.6 Accepting the setting

Pressing the Prog/Mode key causes the current setting to be accepted. Programming then switches to the next menu item.

7.7 Ending the programming

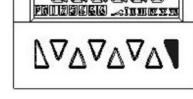

During programming, it is possible to exit the programming at each menu item by pressing the reset key.

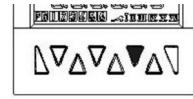

Press the Reset key

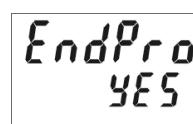

⇒ The security prompt appears in the display

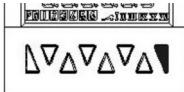

Pressing the Prog/Mode key acknowledges this prompt and causes the programming menu to start again from the beginning. The previously-programmed values are preserved. These can now be changed or checked again.

Pressing the decade key T2 selects the termination of the programming

⇒ The security prompt appears in the display

Pressing the Prog/Mode key acknowledges this prompt and terminates the programming; the modified settings are saved in the EEPROM.

⇒ The text **SAVE** is displayed for 2 s

SAVE

7.8 Programming Menu

7.8.1 Default parameters

Note: Three default parameter sets have been permanently stored; these can be adapted as required. With each acknowledgment of the parameter sets, all parameters will be reset to the values listed in the table.
The dEFAuL P.USer can be freely programmed.

dEFAuL

7.8.4 Pulse Counter

7.8.4.1 Submenu for the Signal and Control inputs

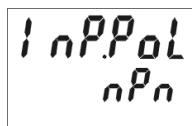

Menu for programming the signal and control inputs

Input polarity

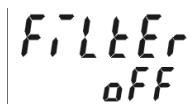

PNP: switching to Plus for all inputs in common

NPN: switching to 0 V for all inputs in common

Filter for the signal inputs InpA and InpB

Maximum count frequency

Damped to approx. 30 Hz (for control with mechanical contacts)

Count Input mode

Count/Direction

INP A: count input
INP B: count direction input

Differential counting [A - B]

INP A: count input add
INP B: count input sub

Totalising [A + B]

INP A: count input add
INP B: count input add

Quadrature input

INP A: count input 0°
INP B: count input 90°

Quadrature with pulse doubling

INP A: count input 0°
INP B: count input 90°
Each pulse edge of INP A will be counted

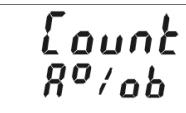

Quadrature x4

INP A: count input 0°
INP B: count input 90°
Each pulse edge of INP A and INP B will be counted.

Ratio measurement [A / B]

Inp A: count input A
Inp B: count input B

Percentage differential counting

$[(A - B) / A \text{ in \%}]$
Inp A: count input A
Inp B: count input B

User input

When the MPI input is activated the display is “frozen” and remains “frozen” until the MPI input is deactivated.

Internally the preset counter continues counting.

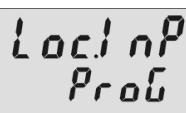

When the MPI input is activated the current count value for the preset that has just been selected will be adopted as the new preset value.
See also 7.9

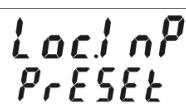

When the MPI input is activated the preset counter will be set to the value specified in the parameter *SEtPt*. See also 7.10

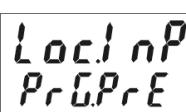

Lock input

When the Lock input is activated the programming is inhibited.

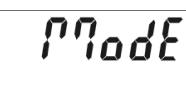

When the Lock input is activated the setting of the preset values is inhibited.

When the Lock input is activated the setting of the preset values and the programming are both inhibited.

7.8.4.2 Submenu for Output operations

Submenu for determining the operation of the outputs

Count mode ADD

Outputs active when count status \geq preset value
Reset to zero

Mode
Addtot

Count mode SUBTRACT
Output 1 active when count status \leq preset value 1
Output 2 active when count status ≤ 0
Reset to preset 2

Mode
AddRr

Count mode ADDING with automatic reset
Output 1 active when count status \geq preset value 1
Output 2 (timed signal) active when count status = preset value 2
Automatic reset to zero when count status = preset value 2
Reset to zero

Mode
SubRr

Count mode SUBTRACTING with automatic reset
Output 1 active when count status \leq preset value 1
Output 2 (timed signal) active when count status = 0
Automatic reset to preset 2 when count status = 0
Reset to preset 2

Mode
AddBrt

Count mode ADDING with automatic reset and Batch counter
Output 2 (timed signal) active when main counter = preset value 2
Automatic reset to zero when main counter = preset 2
Batch counter counts the number of automatic repetitions of preset 2
Output 1 active when Batch counter \geq preset 1
Manual reset sets both counters to zero.
Electrical reset only sets the main counter to zero.

Mode
SubBrt

Count mode SUBTRACTING with automatic reset and Batch counter
Output 2 (timed signal) active when main counter = zero
Automatic reset to preset 2 when main counter = zero
Batch counter counts the number of automatic repetitions of preset 2
Output 1 active when Batch counter \geq preset 1
Manual reset sets main counter to preset value 2, batch counter to zero
Electrical reset only sets the main counter to preset value 2

Mode
Addtot

Count mode ADDING with automatic reset and Total counter
Output 2 (timed signal) active when main counter = preset value 2
Automatic reset to zero when main counter = preset value 2
Total counter counts all the count pulses from the main counter
Output 1 active when total counter \geq preset value 1
Manual Reset sets both counters to zero
Electrical reset only sets the main counter to zero

Mode
Subtot

Count mode SUBTRACTING with automatic reset and Total counter
Output 2 (timed signal) active when main counter = zero
Automatic reset to preset value 2 when main counter = zero
Total counter counts (sub from preset value 1) all count pulses from main counter
Output 1 active when Total counter \leq zero
Manual reset sets both counters to the preset values
Electrical reset sets only main counter to preset value 2

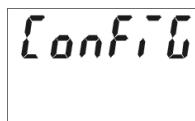

Mode
Tr_RtL

Tracking Preset mode
When preset 2 is changed then preset 1 automatically tracks it.
Reset to zero
Preset 1 relative to preset 2 (see also section 17. Output operations)

Mode
Tr_Rr

Tracking Preset mode with automatic reset
When preset 2 is changed then preset 1 automatically tracks it.
Reset to zero.
Automatic reset to zero when main counter = preset value 2.
Preset 1 relative to Preset 2
(see also section 17. Output operations)

7.8.4.3 Submenu for configuration

Submenu for matching the input pulses and display

Multiplication factor

Multiplication factor can be programmed from 00.0001 to 99.9999.

The setting 00.0000 will not be accepted

Division factor

Division factor can be programmed from 00.0001 to 99.9999.

The setting 00.0000 will not be accepted

Decimal point setting

Decimal point (only optical function)

0	no decimal place
0.0	1 decimal place
0.00	2 decimal places
0.000	3 decimal places
0.0000	4 decimal places
0.00000	5 decimal places

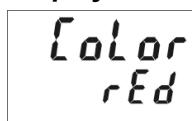

Set value

Set value can be programmed from -999999 to 999999

A previously programmed decimal point will be displayed

Display colour (for device 6.92x.x1x3.xx0)

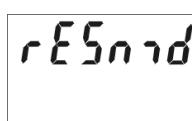

Display colour
upper line red
lower line red

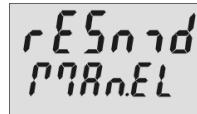

Display colour
upper line red
lower line green

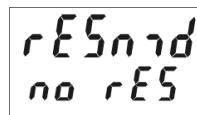

7.8.4.4 Submenu for reset mode

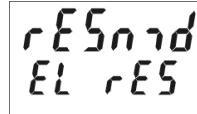

Setting the reset mode

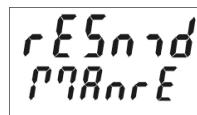

Manual reset (with red key) and electrical reset (reset input)

No reset possible (red key and reset input inhibited)

Only electrical reset possible (reset input)

Only manual reset possible (red key)

7.8.4.5 Preset 1

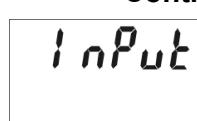

See below 7.8.6.5

7.8.4.6 Preset 2

See below 7.8.6.8

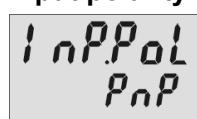

7.8.5 Tacho/Frequency meter

7.8.5.1 Submenu for the Signal and Control inputs

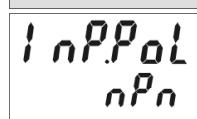

Submenu for programming the signal and control inputs

Input polarity

PNP: switching to Plus for all inputs in common

NPN: switching to 0 V for all inputs in common

Filter for the signal inputs Inp A and Inp B

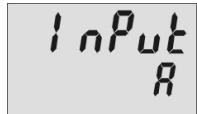

maximum count frequency

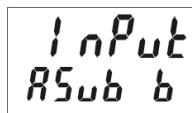

damped to approx. 30 Hz (for control with mechanical contacts)

Input mode Frequency Measurement

Simple frequency measurement

Inp A: Frequency input
Inp B: no function

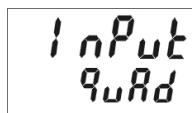

Differential measurement [A - B]

Inp A: Frequency input A
Inp B: Frequency input B

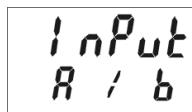

Total measurement [A + B]

Inp A: Frequency input A
Inp B: Frequency input B

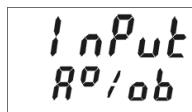

Frequency measurement with direction recognition [Quad]

Inp A: Frequency input 0°
Inp B: Frequency input 90°

Ratio measurement [A / B]

Inp A: Frequency input A
Inp B: Frequency input B

Percentage differential measurement [(A-B) / A in %]

Inp A: Frequency input A
Inp B: Frequency input B

User input

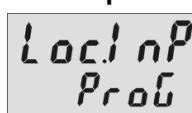

When the MPI input is activated the display is “frozen” and remains “frozen” until the MPI input is deactivated.
Internally the frequency meter continues running.

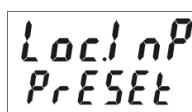

When the MPI input is activated the current frequency for the preset that has just been selected will be adopted as the new preset value.
See also 7.9

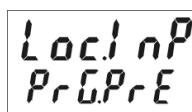

Lock input

When the Lock input is activated the programming is inhibited.

When the Lock input is activated the setting of the preset values is inhibited.

When the Lock input is activated the setting of the preset values and the programming are both inhibited

7.8.5.2 Submenu for configuration

Submenu for matching the input pulses and display

Multiplication factor

Multiplication factor can be programmed from 00.0001 to 99.9999.

The setting 00.0000 will not be accepted

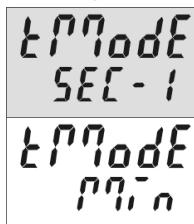

Division factor

Division factor can be programmed from 00.0001 to 99.9999.

The setting 00.0000 will not be accepted

Display mode

Calculation and display of the frequency / speed in 1/s

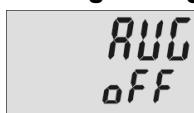

Calculation and display of the frequency / speed in 1/min

Decimal point setting

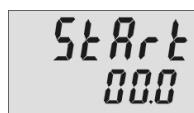

Decimal point
(determines the resolution)
0 no decimal place
0.0 1 decimal place
0.00 2 decimal places
0.000 3 decimal places

Moving average

Moving average calculated
AVG 2 over 2 measurements
AVG 5 over 5 measurements
AVG 10 over 10 measurements
AVG 20 over 20 measurements

Start delay

Start delay
Programmable from 00.0 to 99.9 s

At the start of a measurement the measurement results within this time-period are ignored.

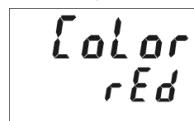

Waiting time

Waiting time
Programmable from 00.1 to 99.9 s.
This value specifies how much time should elapse, after the last

valid edge, before zero is to be displayed.

Display colour (for device 6.92x.x1x3.xx0)

Display colour	
Upper line	red
Lower line	red

Display colour	
Upper line	red
Lower line	green

Start: 1. Edge to Inp B
Stop: 2. Edge to Inp B

Timing can only be controlled via the Gate input
Inp A and Inp B: no function

The timer is reset by means of a RESET (to zero when adding, to preset 2 when subtracting) and then starts timing again.

7.8.5.3 Preset 1

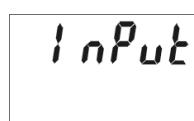

See below 7.8.6.5

7.8.5.4 Preset 2

See below 7.8.6.6

Filter for the signal inputs Inp A and Inp B

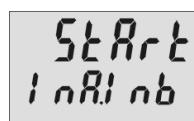

for electronic control of the signal inputs

for mechanical control of the signal inputs (for control with mechanical contacts)

Input mode Time measurement

Start: Edge to Inp A
Stop: Edge to Inp B

Gate control for Timing

Timing takes place when the Gate input is not active.

Timing takes place when the Gate input is active

User input

When the MPI input is activated the display is "frozen" and remains "frozen" until the MPI input is deactivated.

Internally the preset timer continues counting.

When the MPI input is activated the current count value for the preset that has just been selected will be adopted as the new preset value.

See also 7.9

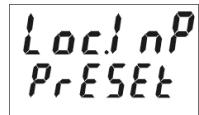

When the MPI input is activated the preset timer will be set to the value specified in the parameter *SEtPt*. See also 7.10

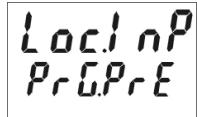

Lock input

When the Lock input is activated the programming is inhibited.

When the Lock input is activated the setting of the preset values is inhibited.

When the Lock input is activated the setting of the preset values and the programming are both inhibited.

7.8.6.2 Submenu for the output operations

Submenu for determining the operation of the outputs

**Count mode ADD**

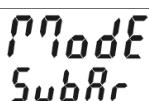

Outputs active when count status \geq preset value
Reset to zero

**Count mode SUBTRACT**

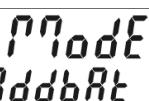

Output 1 active when count status \leq preset value 1
Output 2 active when count status ≤ 0
Reset to zero

**Count mode ADDING with automatic reset**

Output 1 active when count status \geq preset value 1
Output 2 (timed signal) active when count status = preset value 2
Automatic reset to zero when count status = preset value 2
Reset to zero

**Count mode SUBTRACTING with automatic reset**

Output 1 active when count status \leq preset value 1
Output 2 (timed signal) active when count status = 0
Automatic reset to preset 2 when count status = 0
Reset to preset 2

**Count mode ADDING with automatic reset and Batch counter**

Output 2 (timed output) active when main counter = preset value 2
Automatic reset to zero when

main counter = preset value 2

Batch counter counts the number of automatic repetitions of preset 2

Output 1 active when batch counter \geq preset 1

Manual reset sets both counters to zero

Electrical reset sets only main counter to zero

**Count mode SUBTRACTING with automatic reset and Batch counter**

Output 2 (timed signal) active when main counter = zero

Automatic reset to preset 2 when main counter = zero

Batch counter counts the number of automatic repetitions of preset 2

Output 1 active bei Batchzähler \geq Preset 1

Manual reset sets main counters to preset value 2 and batch counter to zero

Electronic reset only sets the main counter to preset value 2

**Count mode ADDING with automatic reset and Total counter**

Output 2 (timed signal) active when main counter = preset value 2

Automatic reset to zero when main counter = preset value 2

Total counter counts all the count pulses from the main counter

Output 1 active when total counter \geq preset value 1

Manual Reset sets both counters to zero

Electronic reset only sets the main counter to zero

**Count mode SUBTRACTING with automatic reset and Total counter**

Output 2 (timed signal) active when main counter = zero

Automatic reset to preset value 2 when main counter = zero

Total counter counts (sub from preset value 1) all count pulses from main counter

Output 1 active when Total counter \leq zero

Manual reset sets both counters to the preset values

Electronic reset sets only main counter to preset value 2

Tracking preset mode

**Mode
tr.RL**

When preset 2 is changed then preset 1 automatically tracks it.
Reset to zero

Preset 1 relative to preset 2 (see also section 17. Output operations)

**Mode
tr.Ar**

When preset 2 is changed then preset 1 automatically tracks it.
Reset to zero.

Automatic reset to zero when main counter = preset value 2.
Preset 1 relative to Preset 2 (see also section 17. Output operations)

timed output at Output 1,
becomes passive when count \leq
Preset 1. (Deactivation only in
negative direction).

Pr.Out 1
---LJ---

ADD mode output operations:
timed signal at Output 1,
becomes active with positive
direction and when count \geq
Preset 1 and subsequently active
with negative direction and when
count \leq Preset 1
SUB mode output operations:
timed signal at Output 1,
becomes active with negative
direction and when count \leq
Preset 1 and subsequently active
with positive direction and when
count \geq Preset 1

Pr.Out 1
---R--R-

ADD mode output operations:
timed signal at Output 1,
becomes passive with positive
direction and when count \geq
Preset 1 and subsequently
passive with negative direction
and when count \leq Preset 1
SUB mode output operations:
timed output at Output 1,
becomes passive with negative
direction and when count \leq
Preset 1 and subsequently
passive with positive direction
and when count \geq Preset 1

Pr.Out 1
---U-U-

Duration of timed signal of
Output 1, programmable from
00.01 to 99.99 s.
Timed signal is post-triggered

t.out 1
00.01

7.8.6.6 Submenu for Preset 2

PrES 2

Submenu for Preset 2

Pr.Out 2
---f---

ADD mode output operations:
permanent signal at Output 2,
becomes active when count \geq
Preset 2

SUB mode output operations:
permanent signal at Output 2,
becomes active when count \leq
zero

Pr.Out 2
---7---

ADD mode output operations:
permanent signal at Output 2,
becomes passive when count \geq
Preset 2

SUB mode output operations:
permanent signal at Output 2,
becomes passive when count \leq
zero

Pr.Out 2
---f7---

ADD mode output operations:
timed signal at Output 2,
becomes active when count \geq
Preset 2 (Activation only in
positive direction).

SUB mode output operations:
permanent signal at Output 2,
becomes active when count \leq
zero (Activation only in negative
direction)

Pr.Out 2
---LJ---

ADD mode output operations:
timed signal at Output 2,
becomes passive when count \geq
Preset 2 (Deactivation only in
positive direction)

SUB mode output operations:
permanent signal at Output 2,
becomes passive when count \leq
zero (Deactivation only in
negative direction).

Pr.Out 2
---R--R-

ADD mode output operations:
timed signal at Output 2,
becomes active with positive
direction and when count \geq
Preset 2 and subsequently with
negative direction and when
count \leq Preset 2

SUB mode output operations:
timed signal at Output 2,
becomes active with negative
direction and when count \leq zero
and subsequently with positive
direction and when count \geq zero

Pr.Out 2
---U-U-

ADD mode output operations:
timed signal at Output 2,
becomes passive with positive
direction and when count \geq

Out 2
0001

Preset 2 and subsequently with negative direction and when count \leq Preset 2
SUB mode output operations:
timed signal at Output 2,
becomes passive with negative direction and when count \leq zero
and subsequently with positive direction and when count \geq zero

Duration of timed signal of Output 1, programmable from 00.01 to 99.99 s.
Timed output is post-triggered.

Active:
Relay or optocoupler are activated when the preset value is reached.

Passive:
Relay becomes de-energized or the optocoupler disabled when the preset value is reached.

7.9 Setting the presets

7.9.1 Setting via Decade Keys

In programming mode Preset 2 will always be displayed in the lower line. This is except for the output operations AddBat, SubBat,AddTot and SubTot.

ΔΔΔΔΔΔΔΔ

Press the Prog/Mode key until the preset to be changed is displayed - **PR1** or **PR2**.

ΔΔΔΔΔΔΔΔ

Press any decade key

⇒ Display switches to the editor mode

ΔΔΔΔΔΔΔΔ

Set the desired preset value using the decade keys

ΔΔΔΔΔΔΔΔ

Press the Prog/Mode key to confirm the value and save it

⇒ Display switches to the editor mode of the next preset **PR2** or **PR1**

ΔΔΔΔΔΔΔΔ

Approx. 3 s after the last press of the decade keys or by pressing the Reset key the new preset value will be accepted and the counter will switch back to operating mode.

7.9.2 Setting with Teach-In Function

PnP,
tEArch

ΔΔΔΔΔΔΔΔ

Program the MPI input to **tEArch**

In programming mode, select the preset to be changed using the Prog/Mode key

Briefly activate the MPI (NPN or PNP input logic)

⇒ The current count value will be adopted as the new preset value

The preset value can subsequently be further modified via the decade keypad.

7.9.3 Setting the tracking presets (trail)

If a tracking preset has been programmed, the value for Preset 2 can be set either via the decade keypad or via the Teach-IN function.

However the value for Preset 1 must be entered via the decade keypad. In this instance, it is not possible to use the Teach-In function.

7.10 Set Function

Both the pulse counter and the timer can be set to a default value by means of the Set function.

PnP,
Set

Programme the MPI input to **SEt**

SEtPt
999999

Set menu item **SEtPt** to the desired value

Briefly activate the MPI (NPN or PNP input logic)

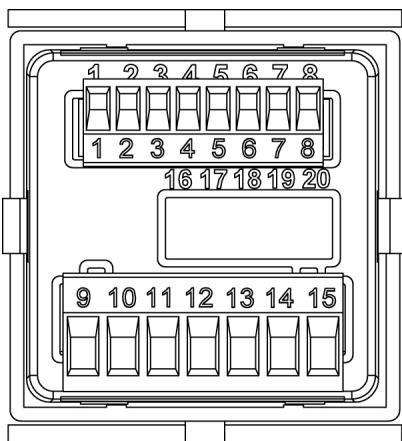

⇒ For add. output operations the pulse counter or timer will be set to the **SEtPt** default value

⇒ For sub. output operations the pulse counter or timer will be set to the difference between the value of Preset 2 and the value of **SEtPt**.

8 Error message

Err 1	Set value is outside the permitted range

N°	Designation	Function

10 Technical Data

10.1 General Data

Display	LCD positive or negative, backlit
Digit height	2 x 6-digit upper line 9 mm lower line 7 mm special characters 2 mm
Overload/ Underload	Blinking, 1 s Counter loses up to 1 decade no pulses
Data retention	> 10 years, EEPROM
Operation	8 keys

10.2 Pulse counter

Count frequency max. 55 kHz (see section 13.
frequencies typ.)

Response time of the outputs:

Relays	Add/Sub/Trail With automatic repeat A/B ; (A-B)/A	< 7 ms < 7 ms < 29 ms
Optocouplers	Add/Sub/Trail With automatic repeat A/B ; (A-B)/A	< 1 ms < 1 ms < 23 ms

10.3 Tacho/Frequency meter

Frequency range 0,01 Hz to 65 kHz (see
section 13. frequencies typ.)

Measuring principle	≤ 76.3 Hz Time interval (period measurement) > 76.3 Hz Gate time Gate time approx. 13.1 ms
Measuring error	< 0.1% per channel

Response time of the outputs:

1-channel operation < 100 ms @ 40 kHz
< 350 ms @ 65 kHz

2-channel operation < 150 ms @ 40 kHz
< 600 ms @ 65 kHz

10.4 Timer

Seconds	0.001 s ... 999 999 s
Minutes	0.001 min ... 999 999 min
Hours	0.001 h .. 999 999 h
h:min:s	00h.00min.01s ... 99h.59min.59s
Min. time measurable	500µs
Measuring error	< 50 ppm
Response time of the outputs:	
Relays	< 7 ms
Optocoupler	< 1 ms

10.5 Signal and Control inputs

Polarity:	programmable NPN/PNP for all inputs in common
Input resistance	5 kΩ
Pulse shape	any
Switching level with AC supply:	
HTL level	Low: 0 ... 4 VDC High: 12 ... 30 VDC
5V level	Low: 0 ... 2VDC High: 3,5 ... 30 VDC
Switching level with DC supply:	
HTL level	Low: 0 ... 0,2 x UB High: 0,6 x UB ... 30 VDC
5V level	Low: 0 ... 2 VDC High: 3,5 ... 30 VDC
Minimum pulse length of the Reset input:	1 ms
Minimum pulse length of the Control inputs:	10 ms

10.6 Outputs

Output 1

Relay with make contact programmable as NC or NO	
Switching voltage	max. 250 VAC/ 110 VDC
Switching current	max. 3 A AC/ V DC min. 30 mA DC
Switching capacity	max. 750 VA / 90 W
Mechanical service life (switching cycles)	2×10^7
N° of switching cycles at 3 A/ 250 V AC	1×10^5
N° of switching cycles at 3 A/ 30 V DC	1×10^5
or NPN optocoupler	
Switching capacity	30 VDC/10 mA
U_{CESAT} for IC = 10 mA:	max. 2.0 V
U_{CESAT} for IC = 5 mA:	max. 0.4 V

Output 2

Relay with changeover contact	
Switching voltage	max. 250 VAC/ 150 VDC
Switching current	max. 3 A AC/ A DC min. 30 mA DC
Switching capacity	max. 750 VA/ 90 W
Mechanical service life (switching cycles)	20×10^6
N° of switching cycles at 3 A/ 250 V AC	5×10^4
N° of switching cycles at 3 A/ 30 V DC	5×10^4

or NPN optocoupler

Switching capacity	30 V DC/10 mA
U_{CESAT} for IC = 10 mA:	max. 2.0 V
U_{CESAT} for IC = 5 mA:	max. 0.4 V

10.7 Supply voltage

AC supply:	90 ... 260 V AC / max. 8 VA 50/ 60 Hz
DC supply:	ext. fuse protection: T 0.1 A 10 ... 30 V DC/ max. 1.5 W reverse polarity protection ext. fuse protection T 0.2 A

10.8 Sensor supply voltage

AC supply:	24 V DC ±15%, 80 mA
DC supply:	max. 80 mA, external voltage supply is connected through

10.9 Climatic Conditions

Operating temperature:	-20°C .. +65°C
Storage temperature:	-25°C .. +75°C
Relative humidity:	RH. 93% at +40°C, non-condensing
Altitude:	to 2000 m

10.10 EMC

Noise immunity:	EN61000-6-2 with shielded signal and control cables
Noise emission:	EN55011 Class B

10.11 Device safety

Design to:	EN61010 Part 1
Protection Class:	Class 2
Application area:	Soiling Level 2

10.12 Mechanical Data

Housing:	Panel-mount housing to DIN 43 700, RAL 7021
Dimensions:	48 x 48 x 91 mm
Panel cut-out:	$45^{+0,6}_{-0,6}$ x $45^{+0,6}_{-0,6}$ mm
Installation depth:	ca. 107 mm incl. terminals
Weight:	ca. 125 g
Protection:	IP 65 (front)
Housing material:	Polycarbonate UL94 V-2
Vibration resistance:	10 - 55 Hz / 1 mm / XYZ (EN60068-2-6): 30 min in each direction
Shock resistance:	100G / XYZ (EN60068-2-27): 3 times in each direction
Cleaning:	The front of the unit should only be cleaned using a soft damp (water!) cloth.

10.13 Connections

Supply voltage and outputs:
Plug-in screw terminal, 7-pin, RM5.08

Core cross section, max. 2.5 mm²

Signal and control inputs:

Plug-in screw terminal, 8-pin, RM 3.81

Core cross-section, max. 1.5 mm²

11 Scope of Delivery
